

DS8T26A/DS8T26AM/DS8T28/DS8T28M 4-Bit Bidirectional Bus Transceivers

General Description

The DS8T26A, DS8T28 consist of 4 pairs of TRI-STATE® logic elements configured as quad bus drivers/receivers along with separate buffered receiver enable and driver enable lines. This single IC quad transceiver design distinguishes the DS8T26A, DS8T28 from conventional multi-IC implementations. In addition, the DS8T26A, DS8T28's ultra high speed while driving heavy bus capacitance (300 pF) makes these devices particularly suitable for memory systems and bidirectional data buses.

Both the driver and receiver gates have TRI-STATE outputs and low current PNP inputs. PNP inputs reduce input loading to 200 μ A maximum.

Features

- Inverting outputs in the DS8T26A
- Non-inverting outputs in the DS8T28
