## Low Cost 20-Pin Frequency Generator

### Description

The ICS9169C-36 generates the I/O clocks needed as a satellite clock generator to a CPU and PCI clock source (such as the **ICS9148-01** or **ICS9150-01**). This device can generate the audio Codec or DSP clocks if required (or Stop those outputs Low).

The device is nominally driven at the X1 pin by a 14.31818 MHz clock source. The device can also be driven by a crystal using external load capacitors as a stand-alone generator. The SREF0 output is a reference clock output which is stronger to allow multiple ISA slots.

### Features

- Generator for periphery clock chips as companion device to CPU/SDRAM/PCI generator.
- Accepts clock input at X1 pin or crystal across X1, X2 pins as 14.31818 MHz nominal inputs.
- Three REF clock buffer outputs (SREF is Strong)
- Two 48MHz and one 24 MHz outputs
- Selectable audio clock generator with audio (Audio) and half speed (Audio/2) outputs
- 20 pin (209 mil) SSOP package

### Block Diagram

### Pin Configuration

VDD	1	20	REF2
X1	2	19	REF1
X2	3	18	VDD
GND	4	17	SREF0
OE	5	16	GND
AUDIO	6	15	48 MHz1
AUDIO/2	7	14	48 MHz0
VDD	8	13	VDD
FS0	9	12	24 MHz
FS1	10	11	GND

20-Pin SSOP

### Functionality

3.3V±10%, 0-70°C

Clock source driving X1 pin or crystal (X1, X2) = 14.31818 MHz  
(all frequencies in MHz)

FS1	FS0	AUDIO	AUDIO/2	SREF, REF	48 MHz	24 MHz

## Pin Descriptions

PIN NUMBER	PIN NAME	TYPE	DESCRIPTION
1, 8, 13, 18	VDD	PWR	3.3V I/O power supply
2	X1	IN	14.318MHz input (requires external components for feedback resistor and load capacitors to be used with a crystal)
3	X2	OUT	Crystal output (no connect for non-crystal applications)
4, 11, 16	GND	Ground	Ground
5	OE	IN	Output enable (Tri-states all outputs when held low). Has pullup
6	AUDIO	OUT	3.3V Audio clock, runs per select table
7	AUDIO/2	OUT	3.3V Audio clock, runs per select table
9, 10	FS0, FS1	IN	Frequency mode select pins. Has pullup.
12	24 MHz	OUT	3.3V clock, runs @ 24 MHz
14, 15	48 MHz (0:1)	OUT	3.3V Clock, runs @ 48 MHz
19, 20	REF1, REF2 (1:2)	OUT	3.3V clock, runs @ 1x X1
17	SREF0	OUT	Strong reference clock OUT 3.3V clock, runs @ 1x X1

## Absolute Maximum Ratings

Supply Voltage .....	7.0V
Voltage on I/O pins referenced to GND .....	GND -0.5 V to V <sub>DD</sub> +0.5 V
Operating Temperature under bias .....	0°C to +70°C
Power dissipation .....	0.5 Watts
Storage Temperature .....	-40°C to +150°C

Stresses above those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only and functional operation of the device at these or any other conditions above those listed in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

## Electrical Characteristics at 3.3V

V<sub>DD</sub> = 3.0 – 3.7 V, T<sub>A</sub> = 0 – 70°C unless otherwise stated

DC Characteristics						
PARAMETER	SYMBOL	TEST CONDITIONS	MIN	TYP	MAX	UNITS
