Switching Characteristics

PARAMETER	SYMBOL	CONDITION	MIN	TYP	MAX	UNITS
Maximum Operating Frequency			66		200	MHz
Input clock duty cycle	d_{in}		40		60	%
Output to Output Skew	T_{skew}				100	ps
Pulse skew	T_{skewp}				100	ps
Duty cycle	D_C^2	66MHz to 100MHz	48		52	%
		101MHz to 167MHz	47		53	%
Rise Time, Fall Time	tr, tf	Load = 120Ω/16pF	650		950	ps

Notes:

- Refers to transition on noninverting output.
- While the pulse skew is almost constant over frequency, the duty cycle error increases at higher frequencies. This is due to the formula: duty cycle= t_{WH}/t_c , were the cycle (t_c) decreases as the frequency goes up.

Absolute Maximum Ratings

Supply Voltage (VDD)	-0.5V to 3.6V
Logic Inputs	GND -0.5 V to V _{DD} +0.5 V
Ambient Operating Temperature	0°C to +85°C
Storage Temperature	-65°C to +150°C

Stresses above those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only and functional operation of the device at these or any other conditions above those listed in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

Notes:

1. The ICS clock generator is a slave/receiver, I²C component. It can read back the data stored in the latches for verification. **Read-Back will support Intel PIIX4 "Block-Read" protocol.**
2. The data transfer rate supported by this clock generator is 100K bits/sec or less (standard mode)
3. The input is operating at 3.3V logic levels.
4. The data byte format is 8 bit bytes.
5. To simplify the clock generator I²C interface, the protocol is set to use only "**Block-Writes**" from the controller. The bytes must be accessed in sequential order from lowest to highest byte with the ability to stop after any complete byte has been transferred. The Command code and Byte count shown above must be sent, but the data is ignored for those two bytes. The data is loaded until a Stop sequence is issued.
6. At power-on, all registers are set to a default condition, as shown.
