Philips Semiconductors

Pi–bus transceiver 74F776

FEATURES

- Octal latched transceiver
- Drives heavily loaded backplanes with equivalent load impedances down to 10 ohms
- High drive (100mA) open collector drivers on B port
- Reduced voltage swing (1 volt) produces less noise and reduces power consumption
- High speed operation enhances performance of backplane buses and facilitates incident wave switching
- Compatible with Pi–bus and IEEE 896 Futurebus standards
- Built–in precision band–gap reference provides accurate receiver thresholds and improved noise immunity
- Controlled output ramp and multiple GND pins minimize ground bounce
- Glitch–free power up/power down operation
- Multiple package options
- Industrial temperature range available (–40°C to +85°C)

DESCRIPTION

The 74F776 is an octal bidirectional latched transceiver and is intended to provide the electrical interface to a high performance wired–OR bus. The B port inverting drivers are low–capacitance open collector with controlled ramp and are designed to sink 100mA from 2 volts. The B port inverting receivers have a 100 mV threshold region and a 4ns glitch filter.

The 74F776 B port interfaces to 'Backplane Transceiver Logic' (BTL). BTL features a reduced (1V to 2V) voltage swing for lower power consumption and a series diode on the drivers to reduce capacitive loading. Incident wave switching is employed, therefore BTL propagation delays are short. Although the voltage swing is less for BTL, so is its receiver threshold, therefore noise margins are excellent.

BTL offers low power consumption, low ground bounce, EMI and crosstalk, low capacitive loading, superior noise margin and low propagation delays. This results in a high bandwidth, reliable backplane.

The 74F776 A port has TTL 3–state drivers and TTL receivers with a latch function. A separate high–level control voltage input (V_X) is provided to limit the A side output level to a given voltage level (such as 3.3V). For 5.0V systems, V_X is simply tied to V_{CC}.

The 74F776 has a designed feature to control the B output transitions during power sequencing. There are two possible sequencing, They are as follows:

1.When $\overline{LE}$ = low and $\overline{OEB}$n = low then the B outputs are disabled until the $\overline{LE}$ circuitry takes control. Then the B outputs will follow the A inputs, making a maximum of one transition during power–up (or down).

2. If $\overline{LE}$ = high or $\overline{OEB}$n = high then the B outputs will be disabled during power–up (or down).

TYPE	TYPICAL PROPAGATION DELAY	TYPICAL SUPPLY CURRENT(TOTAL)
74F776	6.5ns	80mA

INPUT AND OUTPUT LOADING AND FAN OUT TABLE

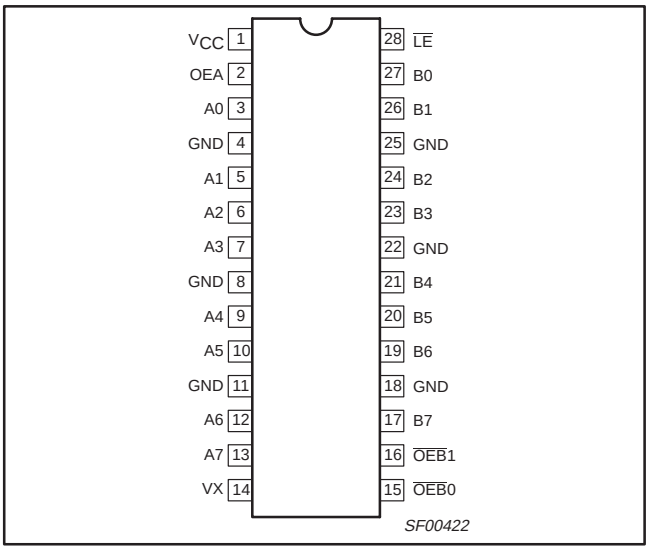
PINS	DESCRIPTION	74F (U.L.) HIGH/LOW	LOAD VALUE HIGH/LOW
A0 – A7	PNP latched inputs	3.5/0.117	70µA/70µA
B0 – B7	Data inputs with threshold circuitry	5.0/0.167	100µA/100µA
OEA	A output enable input (active high)	1.0/0.033	20µA/20µA
$\overline{OEB}$0, $\overline{OEB}$1	B output enable inputs (active low)	1.0/0.033	20µA/20µA
$\overline{LE}$	Latch enable input (active low)	1.0/0.033	20µA/20µA
A0 – A7	3–state outputs	150/40	3mA/24mA
B0 – B7	Open collector outputs	OC/166.7	OC/100mA

Notes to input and output loading and fan out table

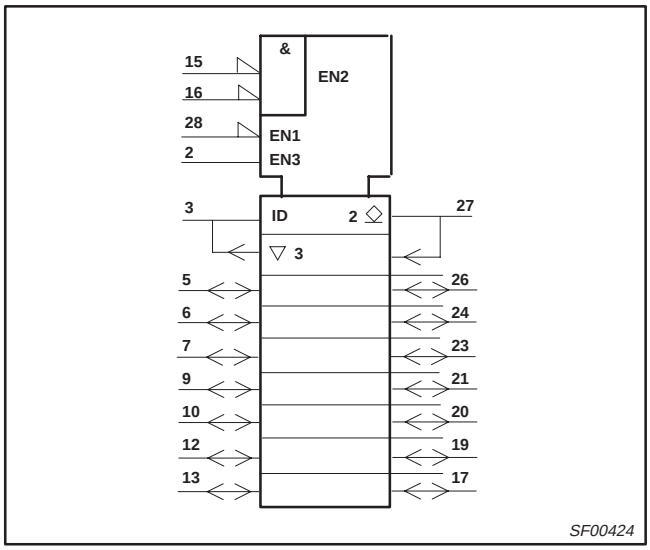
One (1.0) FAST unit load is defined as: 20µA in the high state and 0.6mA in the low state.

OC = Open collector.

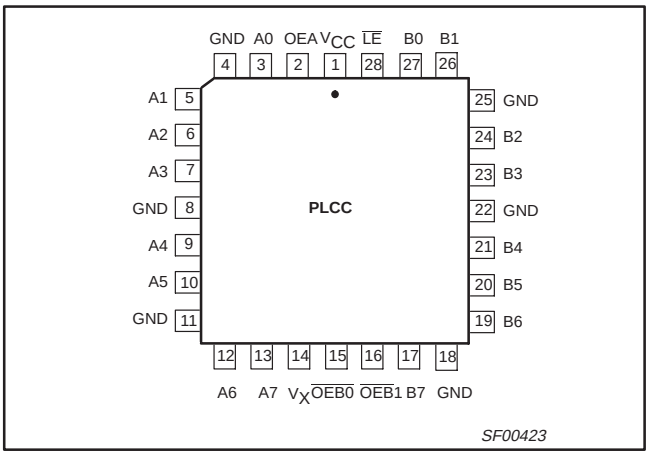
PIN CONFIGURATION



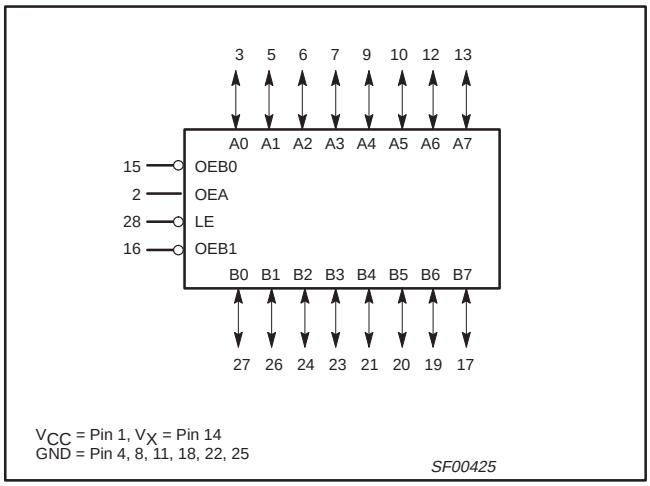
IEC/IEEE SYMBOL



PIN CONFIGURATION PLCC



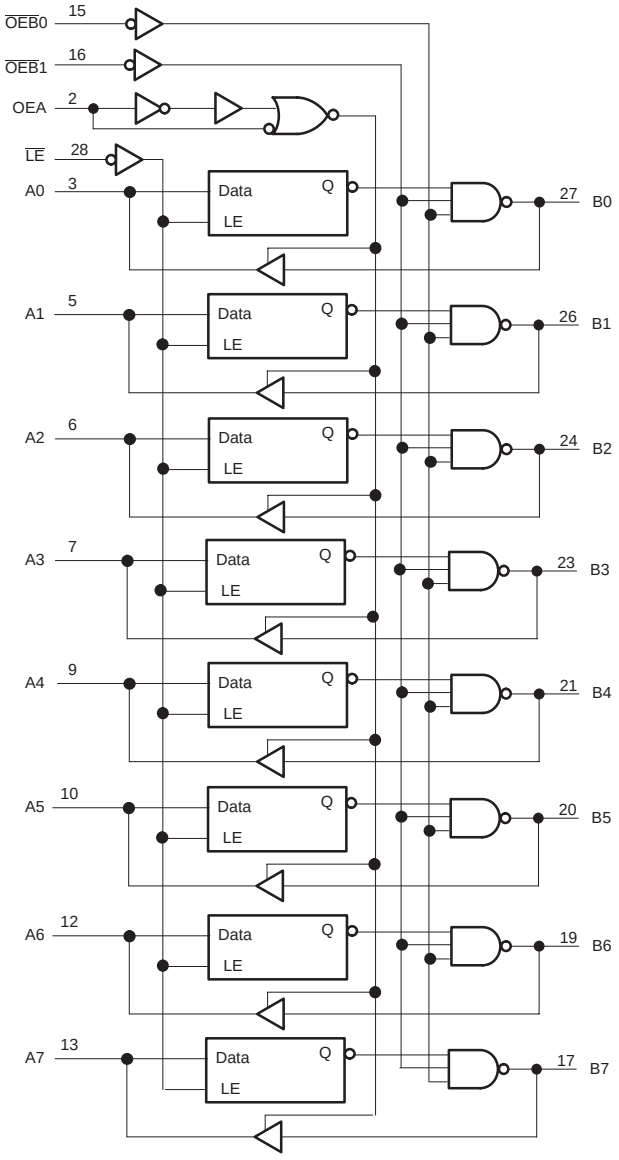
LOGIC SYMBOL



PIN DESCRIPTION

SYMBOL	PINS	TYPE	NAME AND FUNCTION
A0 – A7	3, 5, 6, 7, 9, 10, 12, 13	I/O	PNP latched input/3–state output (with V_X control option)
B0 – B7	27, 26, 24, 23, 21, 20, 19, 17	I/O	Data input with special threshold circuitry to reject noise/ open collector output, high current drive
$\overline{OEB}0$	15	Input	Enables the B outputs when both pins are low
$\overline{OEB}1$	16	Input	
OEA	2	Input	Enables the A outputs when high
$\overline{LE}$	28	Input	Latched when high (a special feature is built in for proper enabling times)
V_X	14	Input	Clamping voltage keeping V_{OH} from rising above V_X ($V_X = V_{cc}$ for normal use)

LOGIC DIAGRAM



V_{CC} = Pin 1, V_X = Pin 14,
GND = Pin 4, 8, 11, 18, 22, 25

–	H	L	H	X	H	H	H	Z	B 3–state, data from B to A
–	L	L	H	X	H	L	L	Z	
–	H	H	H	X	H	Qn	H	Z	
–	L	H	H	X	H	Qn	L	Z	

Notes to function table

H = High voltage level
L = Low voltage level
X = Don't care
– = Input not externally driven
Z = High impedance "off" state
Q_n = High or Low voltage level one setup time prior to the low–to–high $\overline{LE}$ transition.
(1) = Condition will cause a feedback loop path: A to B and B to A.
(2) = The latch must be preconditioned such that B inputs may assume a high or low level while $\overline{OEB}0$ and $\overline{OEB}1$ are low and $\overline{LE}$ is high.
B* = Precaution should be taken to insure the B inputs do not float. If they do they are equal to low state.

ABSOLUTE MAXIMUM RATINGS

(Operation beyond the limit set forth in this table may impair the useful life of the device. Unless otherwise noted these limits are over the operating free air temperature range.)

SYMBOL	PARAMETER		RATING	UNIT
V_{CC}	Supply voltage		–0.5 to +7.0	V
V_X	Threshold control		–0.5 to +7.0	V
V_{IN}	Input voltage	$\overline{OEB}$n, OEA, $\overline{LE}$	–0.5 to +7.0	V
		A0 – A7, B0 – B7	–0.5 to +5.5	V
I_{IN}	Input current		–40 to +5	mA
V_{OUT}	Voltage applied to output in high output state		–0.5 to V_{CC}	V
I_{OUT}	Current applied to output in low output state	A0 – A7	48	mA
		B0 – B7	200	mA
T_{amb}	Operating free air temperature range	Commercial range	0 to +70	°C
		Industrial range	–40 to +85	°C
T_{stg}	Storage temperature range		–65 to +150	°C

		I_{CCL}	V_{CC} = MAX, V_{IL} = 0.5V			100	145	mA
		I_{CCZ}				75	100	mA

Notes to DC electrical characteristics

1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type. Unless otherwise specified, V_X = V_{CC} for all test conditions.
2. All typical values are at V_{CC} = 5V, T_{amb} = 25°C.
3. Not more than one output should be shorted at a time. For testing I_{OS}, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a high output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, I_{OS} tests should be performed last.
4. Due to test equipment limitations, actual test conditions are for V_{IH} =1.8v and V_{IL} = 1.3V.

Definitions

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Disclaimers

Life support — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
