Description

The FAN1654 is a low-cost bi-directional LDO specifically designed for terminating DDR memory bus. It can both sink and source up to 1A continuous, 1.5A peak, providing enough current for most DDR applications. Load regulation meets the JEDEC spec, $VTT = (VDDQ/2) \pm 40\text{mV}$.

The FAN1654 includes a buffered reference voltage capable of supplying up to 5mA current. On-chip thermal limiting provides protection against a combination of power overload and ambient temperature that would create an excessive junction temperature. A shutdown input puts the FAN1654 into a low power mode for laptop computer applications.

The FAN1654 regulator is available in a power-enhanced eTSSOP™-16 package, and the standard SOIC-14

Pin Definitions

Pin Number*	Pin Name	Pin Function Description
1, 2, 7 (4, 5, 10)	VDD	VDD. Input power for the LDO.
3, 6 (6, 9)	VTTFORCE	VTT Force Output.
4, 5, 8 (7, 8, 11)	VSS	Power Ground.
10 (12)	VTTSENSE	VTT Sense. Feedback for remote sense of the VTT voltage.
11 (13)	VREFIN	VREFIN. Alternative input for direct control of VTTOUT and VREFOUT.
12 (14)	SHDN	Shutdown. This active low shutdown turns off both VTT and VREFOUT. This pin has an internal pull-down, and must be externally driven high for the IC to be on.
13 (1)	VSSQ	Signal Ground.
14 (2)	VREFOUT	Buffered Voltage Reference Output.
15 (3)	VDDQ	VDDQ Input. Attach this pin to the VDDQ supply to generate VTT and VREFOUT.
9,16	NC	No Internal Connection
