Dual N-Channel Logic Level PWM Optimized PowerTrench[®] MOSFET

General Description

These N-Channel Logic Level MOSFETs are produced using Fairchild Semiconductor's advanced PowerTrench process that has been especially tailored to minimize the on-state resistance and yet maintain superior switching performance.

These devices are well suited for low voltage and battery powered applications where low in-line power loss and fast switching are required.

Notes:

1. R_{6JA} is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. R_{6JC} is guaranteed by design while R_{6CA} is determined by the user's board design.

b) 125°C/W when mounted on a 0.02 in² pad of 2 oz copper

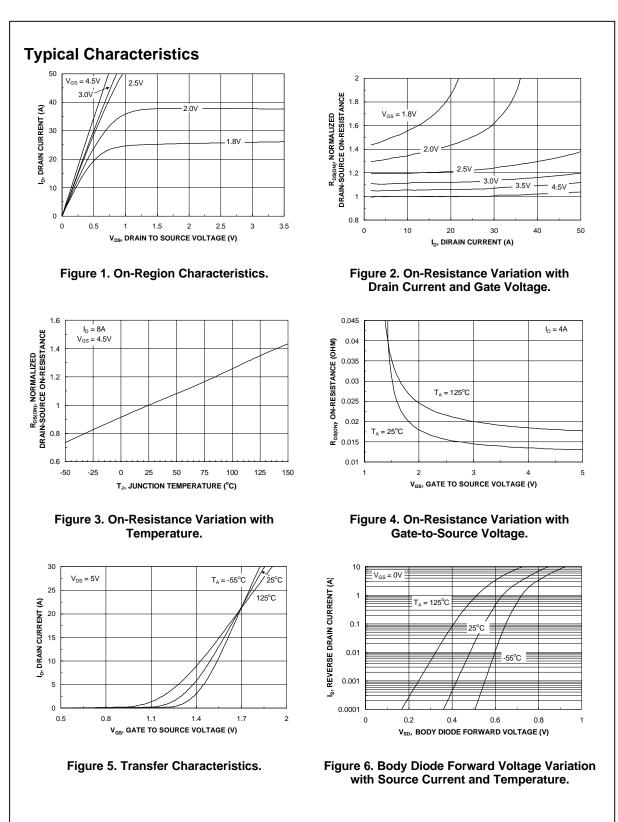

c) 135°C/W when mounted on a minimum mounting pad.
