FSAM10SH60 Smart Power Module (SPM) General Description

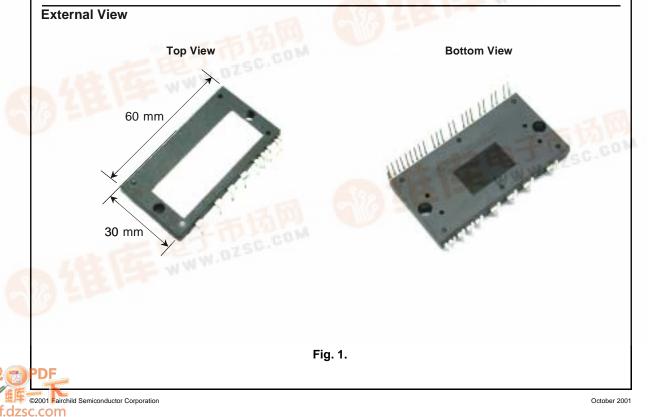

FSAM10SH60 is an advanced smart power module (SPM) that Fairchild has newly developed and designed to provide very compact and low cost, yet high performance ac motor drives mainly targeting high speed low-power inverterdriven application like washing machines. It combines optimized circuit protection and drive matched to low-loss IGBTs. Highly effective short-circuit current detection/ protection is realized through the use of advanced current sensing IGBT chips that allow continuous monitoring of the IGBTs current. System reliability is further enhanced by the built-in over-temperature and integrated under-voltage lock-out protection. The high speed built-in HVIC provides opto-coupler-less IGBT gate driving capability that further reduce the overall size of the inverter system design. In addition the incorporated HVIC facilitates the use of singlesupply drive topology enabling the FSAM10SH60 to be driven by only one drive supply voltage without negative bias. Inverter current sensing application can be achieved due to the devided nagative dc terminals.

Features

- 600V-10A 3-phase IGBT inverter bridge including control ICs for gate driving and protection
- Divided negative dc-link terminals for inverter current sensing applications
- Single-grounded power supply due to built-in HVIC
- Typical switching frequency of 15kHz
- Built-in thermistor for over-temperature monitoring
- Inverter power rating of 0.4kW / 100~253 Vac
- Isolation rating of 2500Vrms/min.
- Very low leakage current due to using ceramic substrate
- Adjustable current protection level by varying series resistor value with sense-IGBTs

Applications

- AC 100V ~ 253V three-phase inverter drive for small power (0.4kW) ac motor drives
- Home appliances applications requiring high switching frequency operation like washing machines drive system
- Application ratings:
 - Power : 0.4 kW / 100~253 Vac
 - Switching frequency : Typical 15kHz (PWM Control)
 - 100% load current : 3.0A (Irms)
 - 150% load current : 4.5A (Irms) for 1 minute

Integrated Power Functions

• 600V-10A IGBT inverter for three-phase DC/AC power conversion (Please refer to Fig. 3)

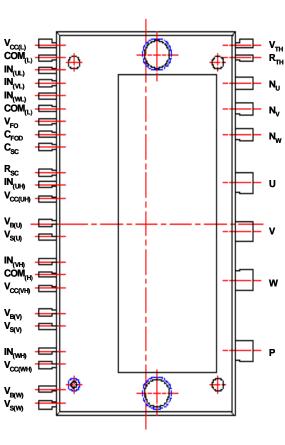

Integrated Drive, Protection and System Control Functions

- For inverter high-side IGBTs: Gate drive circuit, High voltage isolated high-speed level shifting
 Control circuit under-voltage (UV) protection
 - Note) Available bootstrap circuit example is given in Figs. 7, 12 and 13.

Top View

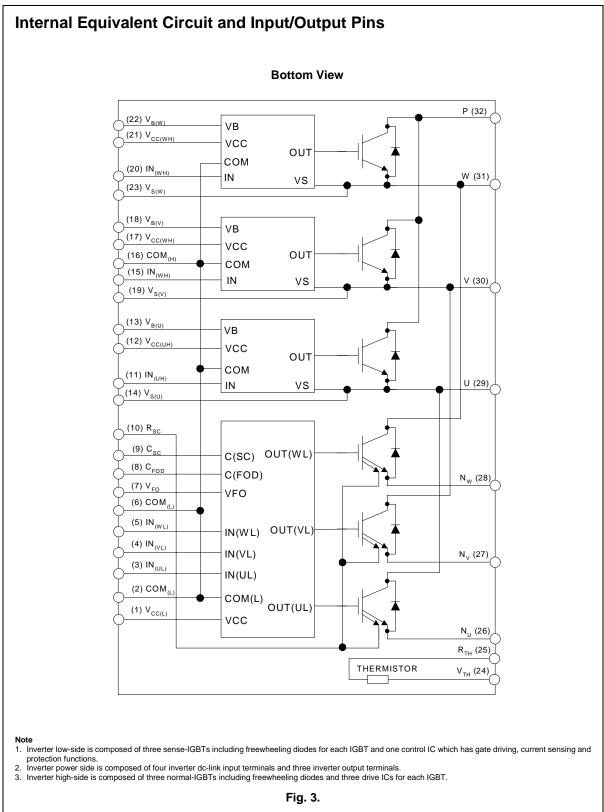

- For inverter low-side IGBTs: Gate drive circuit, Short circuit protection (SC)
 Control supply circuit under-voltage (UV) protection
- Temperature Monitoring: System over-temperature monitoring using built-in thermistor
 - Note) Available temperature monitoring circuit is given in Fig. 13.
- Fault signaling: Corresponding to a SC fault (Low-side IGBTs) or a UV fault (Low-side supply)
- Input interface: 5V CMOS/LSTTL compatible, Schmitt trigger input

Pin Configuration

Note 3. Short-circuit current protection is functioning only at the low-sides. It would be recommended that the value of the external sensing resistor (R_{SC}) should be selected around 56 Ω in order to make the SC trip-level of about 15A at the shunt resistors (R_{SU}, R_{SV}, R_{SW}) of Ω . For the detailed information about the relationship between the external sensing resistor (R_{SC}) and the shunt resistors (R_{SU}, R_{SV}, R_{SW}), please see Fig. 6. 4. The fault-out pulse width t_{FOD} depends on the capacitance value of C_{FOD} according to the following approximate equation : C_{FOD} = 18.3 x 10⁻⁶ x t_{FOD}[F]
