### Applications

### 1.1 Brief Description

The FX128 is a full-duplex frequency inversion scrambler designed to provide secure conversations for 46/49 MHz cordless telephone users. The Rx and Tx audio paths consist of the following:

1. A switched-capacitor balanced modulator with high baseband and carrier rejection.
2. A 3.3kHz inversion carrier (injection tone).
3. A 3100Hz lowpass filter.
4. Input op-amps with externally adjustable gain.

The FX128 uses mixed signal CMOS switched-capacitor filter technology and operates from a single supply in the range of 3.0 to 5.5 volts. The inversion carrier's frequency and filter switching clock are generated on-chip using an external 10.24MHz or 3.58/3.6864 MHz crystal or clock input (selectable).

This device is available in 16-pin SOIC (FX128D4) and 16-pin plastic DIL (FX128P3) packages.

Package D4/P3	Signal		Description
Pin No.	Name	Type	
1	XTALN	O/P	This is the output of the clock oscillator inverter.
2	XTAL/CLOCK	I/P	10.24MHz or 3.58/3.6864 MHz or an externally derived clock is injected at this pin. See Figure 2.
3	-	N/C	No connection should be made to this pin.
4	TXOUT	O/P	This is the analogue output of the transmit channel. It is internally biased at $V_{DD}/2$ .
5	TX GAIN AMP OUT	O/P	This is the output pin of the transmit gain adjusting op-amp. See Figure 3 for gain setting components.
6	TXIN	I/P	This is the analogue signal input to the transmit channel. This input goes to a gain adjusting op-amp whose gain is set by external components. See Figure 3.
7	-	N/C	No connection should be made to this pin.

### 1.6 Application Notes

Formulae for calculating the carrier frequency, upper cutoff frequency and lower cutoff frequency with clock select pin high are as follows:

$$\begin{aligned}
 \text{Carrier Frequency} &= (3.2995\text{kHz} / 10.24\text{MHz}) * \text{XTAL frequency} \\
 \text{Upper Cutoff Frequency} &= (2.800\text{kHz} / 10.24\text{MHz}) * \text{XTAL frequency} \\
 \text{Lower Cutoff Frequency} &= (400\text{Hz} / 10.24\text{MHz}) * \text{XTAL frequency}
 \end{aligned}$$

Formulae for calculating the carrier frequency, upper cutoff frequency and lower cutoff frequency with clock select pin low are as follows:

$$\begin{aligned}
 \text{Carrier Frequency} &= (3.2995\text{kHz} / 3.415\text{MHz}) * \text{XTAL frequency} \\
 \text{Upper Cutoff Frequency} &= (2.800\text{kHz} / 3.415\text{MHz}) * \text{XTAL frequency} \\
 \text{Lower Cutoff Frequency} &= (400\text{Hz} / 3.415\text{MHz}) * \text{XTAL frequency}
 \end{aligned}$$

These companies are all 100% owned operating companies of the CML Microsystems Plc Group and these changes are purely changes of name and do not change any underlying legal entities and hence will have no effect on any agreements or contacts currently in force.

### CML Microcircuits Product Prefix Codes

Until the latter part of 1996, the differentiator between products manufactured and sold from MXCOM, Inc. and Consumer Microcircuits Limited were denoted by the prefixes MX and FX respectively. These products use the same silicon etc. and today still carry the same prefixes. In the latter part of 1996, both companies adopted the common prefix: CMX.
