* Condition of light beam interrupted : Lever is normal condition on the Fig.1.

Condition of light beam uninterrupted : Lever is $30^{\circ}$ or more movement condition from A point to B point on Fig.1.

Fig. 1 Detecting Position

Output voltage between A point and C point
shall be from low level to high level
when the actuator level rotated ( $37^{\circ} \pm 5^{\circ}$ )
from normal condition B point to C point in Fig.1.
Normal condition B point shall be
opaque condition.
