# MOTOROLA SEMICONDUCTOR TECHNICAL DATA

# **Dual 2-Bit Adder/Subtractor**

The MC10H180 is a high–speed, low–power, general–purpose adder/subtractor. It is designed to be used in special purpose adders/subtractors or in high–speed multiplier arrays.

Inputs for each adder are Carry–in, Operand A, and Operand B; outputs are Sum, Sum and Carry–out. The common select inputs serve as a control line to Invert A for subtract, and a control line to Invert B.

- Propagation Delay, 1.8 ns Typical, Operand and Select to Output
- Power Dissipation, 360 mW Typical
- Improved Noise Margin 150 mV (Over Operating Voltage and Temperature Range)
- Voltage Compensated
- MECL 10K—Compatible

#### **MAXIMUM RATINGS**

| Characteristic                                | Symbol           | Rating                     | Unit     |
|---|------------------|----------------------------|----------|

#### NOTES:

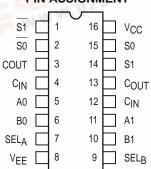

Each MECL 10H series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 lfpm is maintained. Outputs are terminated through a 50–ohm resistor to –2.0 volts.

## MC10H180

#### DIP PIN ASSIGNMENT

Pin assignment is for Dual–in–Line Package. For PLCC pin assignment, see the Pin Conversion Tables on page 6–11 of the Motorola MECL Data Book (DL122/D).
