General Description

The HMC467LP3 is a broadband 2-bit GaAs IC digital attenuator in a low cost leadless surface mount package. Covering DC to 6.0 GHz, the insertion loss is less than 0.7 dB typical. The attenuator bit values are 2 (LSB) and 4 dB for a total attenuation of 6 dB. Attenuation accuracy is excellent at ± 0.2 dB typical step error with an IIP3 of +50 dBm. Two control voltage inputs, toggled between 0 and +5V, are used to select each attenuation state. A single Vdd bias of +5V is required.

Electrical Specifications, T_A = +25° C, With Vdd = +5V & Vctl = 0/+5V*

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 2, 4, 9 - 12, 14, 15	N/C	These pins should be connected to PCB RF ground to maximize performance.	
3	Vdd	Supply Voltage	
5, 8	V2, V1	See truth table and control voltage table.	6, 7	ACG1, ACG2	External capacitor to ground is required. Select value for lowest frequency of operation. Place capacitor as close to pins as possible.	
13, 16	RF2, RF1	These pins are DC coupled and matched to 50 Ohm. Blocking capacitors are required.		GND	Package bottom has an exposed metal paddle that must be connected to RF/DC ground.	

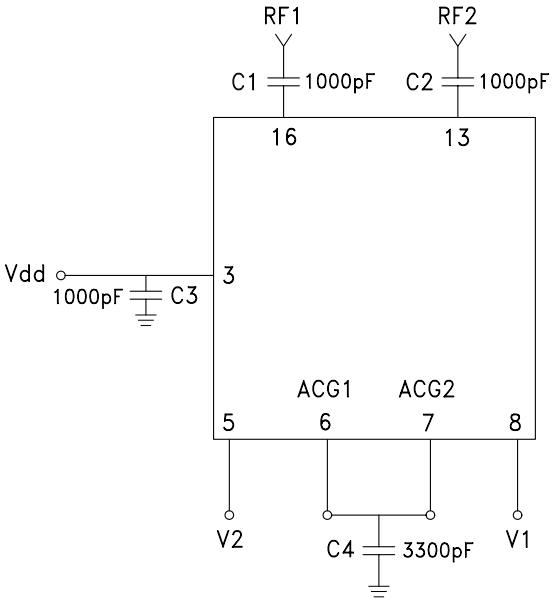
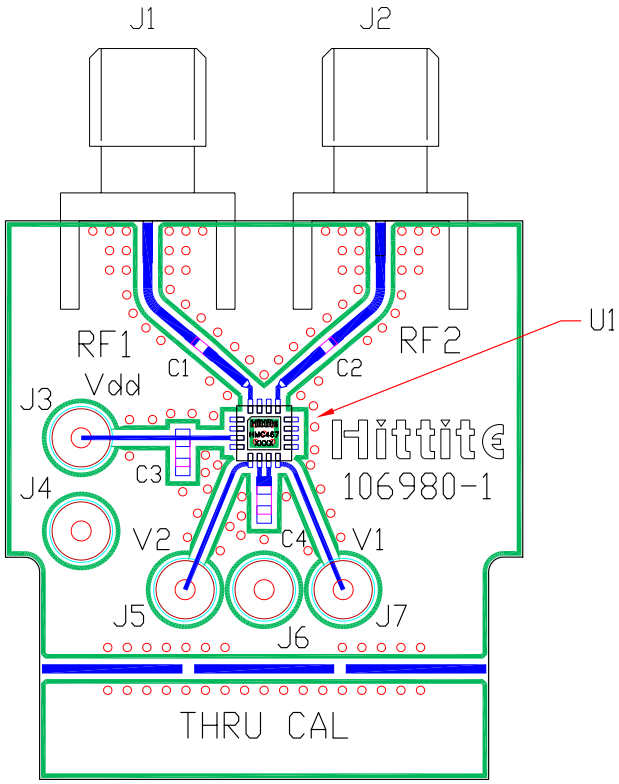
Application Circuit



Evaluation PCB



The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
