#### Description

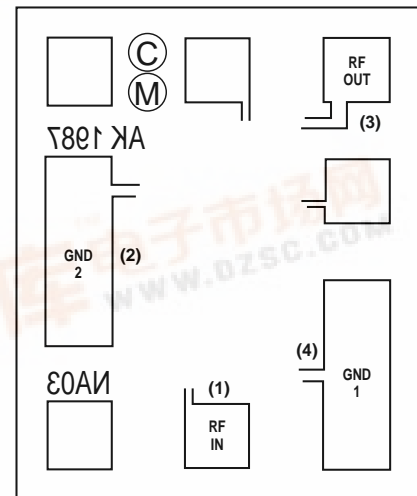

The INA-03100 is a low-noise silicon bipolar Monolithic Microwave Integrated Circuit (MMIC) feedback amplifier chip. It is designed for narrow or wide bandwidth commercial, industrial and military applications that

require high gain and low noise IF or RF amplification with minimum power consumption.

The INA series of MMICs is fabricated using HP's 10 GHz  $f_T$ , 25 GHz  $f_{MAX}$ , ISOSAT™-I silicon bipolar process which uses nitride self-alignment, submicrometer lithography, trench isolation, ion implantation, gold metallization and polyimide intermetal dielectric and scratch protection to achieve excellent performance, uniformity and reliability.

The recommended assembly procedure is gold-eutectic die attach at 400°C and either wedge or ball bonding using 0.7 mil gold wire.<sup>[1]</sup>
