Descriptions

The IRIS4013(K) is a dual mode voltage and current controller combined with a MOSFET in a single package. The IRIS4013(K) is designed for use in AC/DC switching power supplies up to 230VAC nominal input, and is capable of powers up to 120W for a universal input. The device operates on a quasi-resonant or Pulse Ratio Control (PRC) basis, and thereby variable frequency operation.

Absolute Maximum Ratings

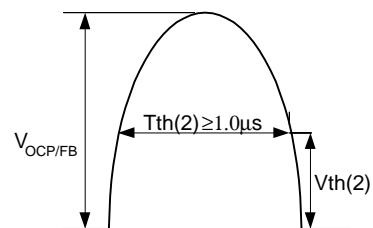

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to terminals stated, all currents are defined positive into any lead. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.
