

# LINEAR INTEGRATED CIRCUITS

## ADVANCE DATA

### HIGH EFFICIENCY POWER OPERATIONAL AMPLIFIER

- OUTPUT CURRENT TO 4A
- SUPPLY VOLTAGE TO  $\pm 20$ V
- LARGE COMMON-MODE RANGE
- LARGE DIFFERENTIAL MODE RANGE
- LARGE BANDWIDTH
- LOW SATURATION
- SOA PROTECTION
- SHORT CIRCUIT PROTECTION
- THERMAL PROTECTION

The L465A is a monolithic integrated circuit in PENTAWATT package, intended for use as power operational amplifier in a wide range of applications, including servo amplifiers and power supplies.

The high gain and high output power capability provide superior performance wherever an operational amplifier/power booster combination is required.

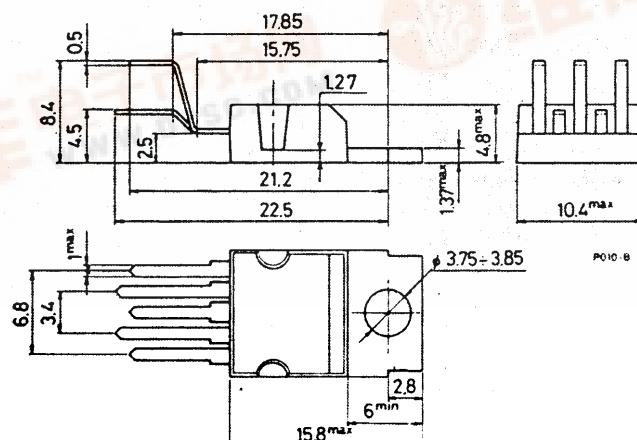

### ABSOLUTE MAXIMUM RATINGS

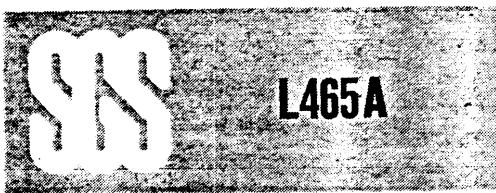

$V_s$	Supply voltage	$\pm 20$	V
$V_i$	Input voltage	$\pm 15$	V
$V_d$	Differential input voltage	4	A

## APPLICATION INFORMATION

This circuit carries out bidirectional speed control of DC motors (fig. 3). The motor runs in one direction or in another according to whether the input voltage is higher or lower than  $V_s/2$ . The output impedance of the circuit seen by the motor is  $R_o = \frac{-2 R_4 \cdot R_1}{R_x}$  so by imposing that the equation  $R_M = R_o$  ( $R_M$  = internal resistance of motor) is checked the maximum load regulation condition is obtained. For circuit stability it should be  $R_M > |R_o|$  hence we get

$$R_x > \frac{2 R_4 \cdot R_1}{R_M}$$

The voltage available at the terminals of the motor is

$$V_M = 2(V_{in} - \frac{V_s}{2}) + |R_o| \cdot I$$
