

Monolithic Linear IC

SANYO	NO.2118A	LA5666
	Multifunction Multiple Voltage Regulator	

Use

- Especially suited for use in micorcomputer-controlled tuners, receivers, preamps and the like

Functions and Features

- Two independent regulators contained in a single chip (13.0V/350mA, 5.6V/100mA)
 - Reset circuit which delivers the reset signal on the positive transition, negative transition of the 5.6V output
 - Muting circuit which detects the 13.0V input and reset output to deliver the muting signal
- (We have the LA5665 whose detection function for reset, muting is provided on the output voltage side.)
