

Monolithic Linear IC

## OVERVIEW

The LA8604M is a narrowband FM IF stage IC that incorporates all the functional blocks for a complete IF stage, including noise filtering, making it ideal for use in cordless telephones.

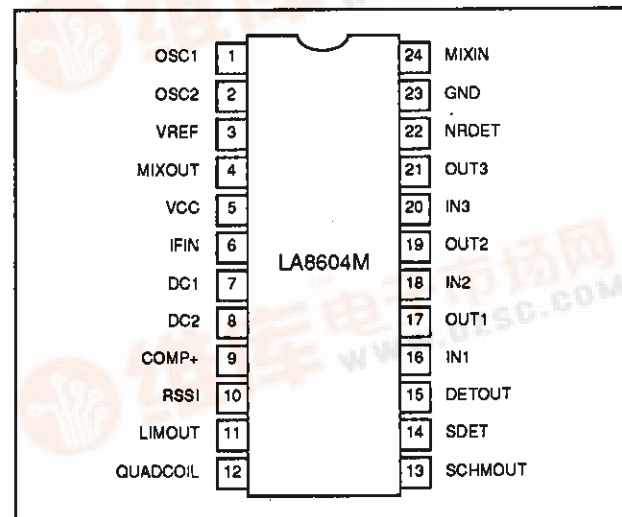

The LA8604M comprises a second-stage oscillator, a mixer, an IF amplifier, an FM detector, and noise detector, amplifier and rectifier circuits. A signal level meter output which is linear over a wide dynamic range of up to 70 dB is also incorporated.

The LA8604M operates from a 2.4 to 6 V supply and is available in 24-pin MFPs.
