LH0042 Low Cost FET Op Amp

General Description

The LH0042 is a FET input operational amplifier with very high input impedance and low input currents with no compromise in noise, common mode rejection ratio, open loop gain, or slew rate. The LH0042 is internally compensated and is free of latch-up.

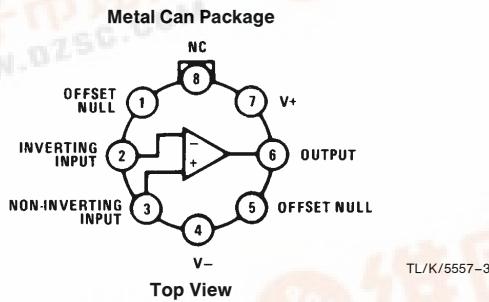

The LH0042 is specified for operation over the -55°C to $+125^{\circ}\text{C}$ military temperature range. The LH0042C is specified for operation over the -25°C to $+85^{\circ}\text{C}$ temperature range.

The LH0042 op amp is intended to fulfill a wide variety of applications for process control, medical instrumentation, and other systems requiring very low input currents. The LH0042 provides low cost high performance for such applications as electrometer and photocell amplification, picoammeters, and high input impedance buffers.

Features

- High open loop gain—100 dB typ
- Internal compensation
- Pin compatible with standard IC op amps (TO-99 package)

	$BW = 10\text{ Hz to }10\text{ kHz}$, $R_S = 10\text{ k}\Omega$		12			12		μVRms	

Note 1: For supply voltages less than $\pm 15\text{V}$, the absolute maximum input voltage is equal to the supply voltage.

Note 2: Rating applies for minimum source resistance of $10\text{ k}\Omega$, for source resistances less than $10\text{ k}\Omega$, maximum differential input voltage is $\pm 5\text{V}$.

Note 3: Unless otherwise specified, these specifications apply for $\pm 5\text{V} \leq V_S \leq \pm 20\text{V}$ and $-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$ for the LH0042 and $-25^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$ for the LH0042C. Typical values are given for $T_A = 25^\circ\text{C}$.

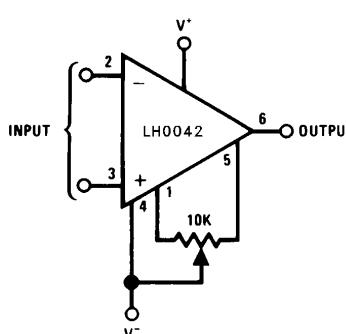

Note 4: Input currents are a strong function of temperature. Due to high speed testing they are specified at a junction temperature $T_j = 25^\circ\text{C}$. Self heating will cause an increase in current in manual tests. 25°C spec is guaranteed by testing at 125°C .

Note 5: See RETS0042X for the LH0042H military specifications.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
