

**DESCRIPTION**

The M51397AP is a semiconductor integrated circuit for SECAM system color television receivers. It CONTAINS chroma processor, chroma demodulator, DC regenerator and system switches for PAL/SECAM dual system.

Dual system color television receivers can be implemented by M51395AP (PAL chroma system and video processor) and M51397AP (SECAM chroma processor and system switch).

**FEATURES**

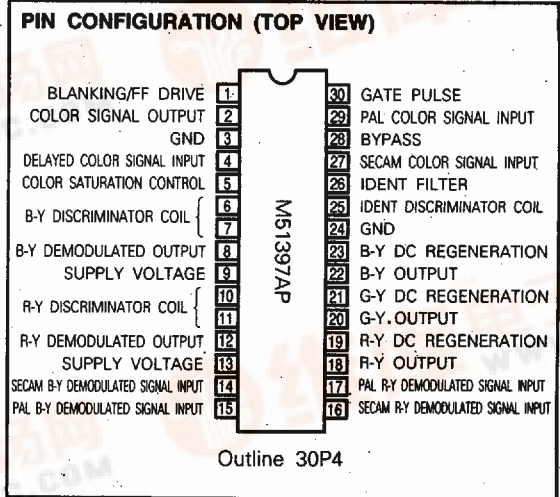

- Automatic mode switching for dual systems.
- Common delay line for dual systems.
- Minimum external components.
- Directly drives chroma output transistors.

**APPLICATION**

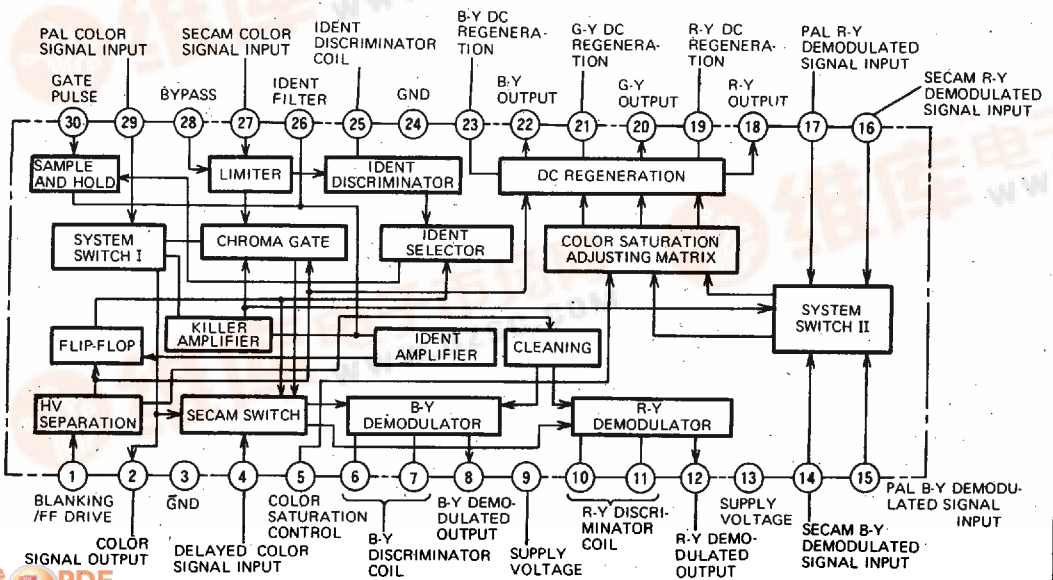

SECAM system color TV, color signal processors

**RECOMMENDED OPERATING CONDITION**

Supply voltage range ..... 11~13V  
 Rated supply voltage ..... 12V

**BLOCK DIAGRAM**

**ABSOLUTE MAXIMUM RATINGS**

Symbol	Parameter	Ratings	Unit

**ELECTRICAL CHARACTERISTICS TEST METHOD**

- Note:1  $V_{\text{e}}$  (@SW3 → ON. Input signal f=4.3MHz,  $V_{\text{e}}=100\text{mV}_{\text{P-P}}$ )
- Note:2  $20\log(V_{\text{e}-1}/V_{\text{e}-2})$ , where  $V_{\text{e}-1}$  (100mV<sub>P-P</sub>) →  $V_{\text{e}-2}$  (@ $V_{\text{e}} \rightarrow 0$ ), f=4.3MHz
- Note:3 Same as Note 2 (input  $V_{\text{e}-1}$ , 1V<sub>P-P</sub>, f=4.3MHz)
- Note:4 Input signal f=4.328MHz, 200mV<sub>P-P</sub>
- Note:5  $20\log(V_{\text{e}-1}/V_{\text{e}-2})$  where  $V_{\text{e}-1}$  (100mV<sub>P-P</sub>) →  $V_{\text{e}-2}$  (@ $V_{\text{e}} \rightarrow 0$ )
- Note:6 Measured after eliminating SYNC pulses.
- Note:7 Center Value of carrier @SW2 → b,c
- Note:8  $V_{\text{b}}/V_{\text{c}}$
- Note:9 Output linearity (I) =  $\frac{(V_{\text{o}} \text{ at } f_{\text{o}} + 300\text{kHz}) - (V_{\text{o}} \text{ at } f_{\text{o}})}{(V_{\text{o}} \text{ at } f_{\text{o}} + 100\text{kHz}) - (V_{\text{o}} \text{ at } f_{\text{o}})}$   
 Output linearity (II) =  $\frac{(V_{\text{o}} \text{ at } f_{\text{o}} - 300\text{kHz}) - (V_{\text{o}} \text{ at } f_{\text{o}})}{(V_{\text{o}} \text{ at } f_{\text{o}} - 100\text{kHz}) - (V_{\text{o}} \text{ at } f_{\text{o}})}$   
 SW2 → d, e, SW3 → ON, 2200pF at b, c  
 Reference Signal at b: 4.406MHz (f<sub>OR</sub>), 200mV<sub>P-P</sub>  
 Reference Signal at c: 4.25MHz (f<sub>OB</sub>), 200mV<sub>P-P</sub>
- Note:10  $V_{\text{o}}$  at 1H, (SW2 → d, e, SW3 → ON, SW4 → ON, SW5 → ON)
- Note:11  $\Delta V_{\text{o}}$  at 20dB change of input signal  
 SW2 → d, e, SW3 → ON, SW4 → ON, SW5 → ON  
 Reference signal at b: 4.406MHz, 200mV<sub>P-P</sub>  
 Reference signal at c: 4.25MHz, 200mV<sub>P-P</sub>  
 DC Voltage between blanking interval and signal interval are adjusted to same voltage by L<sub>1</sub>, L<sub>2</sub>.
- Note:12  $20\log \text{VAVF}$  (db)  
 SW2 → d, e, SW3 → ON, Input signal voltage 200mV<sub>P-P</sub> without SYNC  
 Output voltage VF: SG2 4.25MHz, 4.406MHz FM modulated by f<sub>m</sub>=400Hz, 75kHz  
 Output voltage VA: SG2 4.25MHz, 4.406MHz AM modulated by f<sub>m</sub>=400Hz, 30%

- Note:13  $V_{\text{e}}$  at No Load.
- Note:14  $\frac{V_{\text{o}} \text{ at } V_{\text{e}}}{V_{\text{o}} \text{ at } V_{\text{e}}=6\text{V}}$  (dB) (SW2 → b, c, SW6 → k, l)
- Note:15 Maximum Output Voltage without distortion at a change of  $V_{\text{e}}$
- Note:16  $\frac{V_{\text{o}}(\text{B-Y})}{V_{\text{o}}(\text{R-Y})} \frac{V_{\text{o}}(\text{G-Y})}{V_{\text{o}}(\text{R-Y})}$  ( $V_{\text{o}}(\text{R-Y})=2V_{\text{P-P}}$ )
- Note:17 DC voltage at  $V_{\text{e}}=4\text{V}$
- Note:18  $V_{\text{e}}-V_{\text{e}}$ ,  $V_{\text{e}}-V_{\text{e}}$ ,  $V_{\text{e}}-V_{\text{e}}$  (at  $V_{\text{e}}=4\text{V}$ )
- Note:19 SG3=0.4V<sub>P-P</sub>, 500kHz  $V_{\text{e}}=6\text{V}$  SW2→d, e  
 I (Crosstalk SECAM → PAL)  
 Each output level at SW5→ON, SW6→k, l  
 II (Crosstalk PAL → SECAM)  
 Each output level at SW3→ON, SW5→OFF, SW6→m,n
- Note:20 Same measurement as Note:23 at  $V_{\text{e}} = 4\text{V}$
- Note:21 Ratio of output voltage between each line (dB), at SW2 → d, e, SW4 → ON
- Note:22 I  $V_{\text{e}}$  DC at SW3 → ON  
 II  $V_{\text{e}}$  DC at SW5 → ON
- Note:23 I Difference of output level between each line at SW2 → d, e  
 II Difference of output level between each line at SW1 → 2 SW2 → d, e,  $V_{\text{e}} \rightarrow 1\text{V}_{\text{P-P}}$   
 Frequency at pin 27 and 4 are same (4.25 and 4.406MHz)  
 $V_{\text{e}} 1\text{V}_{\text{P-P}}+3\text{dB} \sim 1\text{V}_{\text{P-P}}-3\text{dB}$
- Note:24 Difference of output level between each line at SW2 → b, c, SW6 → k, l
- Note:25 Difference of DC output voltage between as the change of color control
- Note:26 Difference of DC output voltage between each output as the change of color control
- Note:27 Output level at SG 0.4 V<sub>P-P</sub>, 500kHz, SW2 de, color VR max

- I SW3 → ON, SW6 → k, l
- II SW3 → OFF, SW6 → m, n

Note:28  $V_{\text{a}} - V_{\text{b}}/4 - V_{\text{c}}$

where  $V_{\text{a}}$ ,  $V_{\text{b}}$ ,  $V_{\text{c}}$  are output voltages at supply voltage 10, 12, 14V.

Note:29 Topg-20 ~ +65°C.

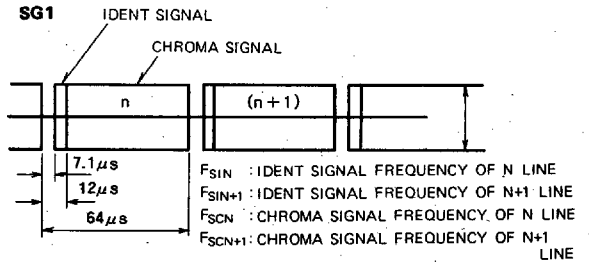

Note:30 Output level (after eliminating SYNC pulse) at input Signal 2  $V_{\text{P-P}}$ .  $f=4.3\text{MHz}$

Note:31 I (Crosstalk SECAM → PAL) Input Signal. at ②  $100\text{mV}_{\text{P-P}}$ ,  $f=4.3\text{MHz}$ , without SYNC pulse

II (Crosstalk PAL → SECAM) Input Signal at ③  $2\text{V}_{\text{P-P}}$ ,  $f=4.3\text{MHz}$ , SW3 → ON, SW5 → ON without SYNC pulse

Note:32 Change of output voltage via supply voltage 10, 12, 14 volts (mV/V).

**INPUT SIGNAL**

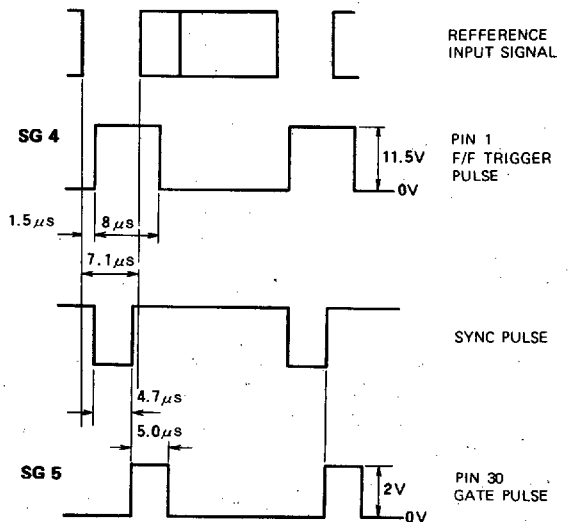

REFERENCE LEVEL 0dB:  $e_c = 100\text{mV}_{\text{P-P}}$

D.L.	The D.L. of M51395AP is applied commonly.

A pot core and a screw core are manufactured by Taiyo Yuden, Japan.

### Adjustment of electrical characteristic for PAL/SECAM dual system circuit M51395AP/M51397AP.

Adjustment is achieved as following sequence.

1. Bell filter transformer "T<sub>1</sub>" (M51397AP)

Apply SECAM color signal to the input.

Adjust bell filter transformer "T<sub>1</sub>" to make the color signal envelope at test point "TP<sub>2</sub>" into flat.

2. Ident discriminator coil "L<sub>1</sub>" (M51397AP)

Adjust ident discriminator coil "L<sub>1</sub>" to give maximum ident filter voltage value at test point "TP<sub>1</sub>".

3. Discriminator (Demodulator) coil "T<sub>3</sub>/T<sub>4</sub>" (M51397AP)

Adjust discriminator coil "T<sub>3</sub>/T<sub>4</sub>" to make the voltage of no color signal equal to the clamp voltage (~7.2V) at pins 18 and 22.

4. 4.433619MHz free run frequency (M51395AP)

Apply PAL B/W signal (no burst) to input, and connect 0.01μF between pin 1 and GND.

Connect high input impedance frequency counter at pin 17.

Adjust the trimmer capacitok "C<sub>t</sub>" to frequency 4.433619MHz.

5. Burst cleaning coil "L<sub>10</sub>" (M51395AP)

Apply PAL color signal to input.

Adjust burst cleaning coil "L<sub>10</sub>" to give minimum chroma output signal value at pin 24.

6. Delay line transformer "T<sub>2</sub>", chroma difference signal control "VR<sub>3</sub>" (M51395AP)

Adjust delay line transformer "T<sub>2</sub>" and chroma difference signal control "VR<sub>3</sub>" to correct demodulated ratios at pins 18, 20 and 22. If demodulated ratios are not correct, readjust burst cleaning coil "L<sub>10</sub>".
