## 5-UNIT 320mA TRANSISTOR ARRAY WITH STROBE

### DESCRIPTION

The M54529P, 5-channel sink driver, consists of 10 NPN transistors connected to form high current gain driver pairs.

### FEATURES

- Output sustaining voltage to 20V
- High output sink current to 320mA
- PMOS Compatible input with strobe control
- Wide operating temperature range ( $T_a = -20 \sim +75^\circ\text{C}$ )

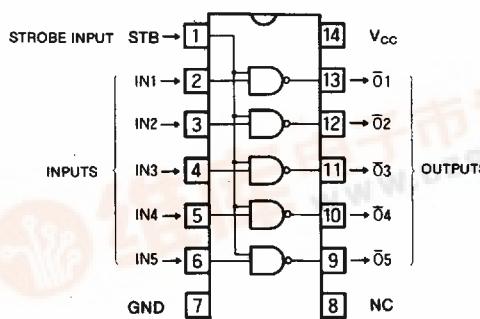

### APPLICATION

Relay and printer driver, LED and incandescent display digit driver, Interfacing for standard MOS/BIPOLAR logics

### FUNCTION

The M54529P uses a predriver stage. Each input has a diode and  $20\text{k}\Omega$  resistor in series to have a wide input voltage range from  $-25\text{V}$  to  $+20\text{V}$ . All input can be controlled simultaneously by a strobe input at pin 1. The power supply of the predrivers is connected to pin 14. All emitters and the substrate are connected together to pin 7. The outputs are capable of sinking 320mA and will withstand 20V in the OFF state.

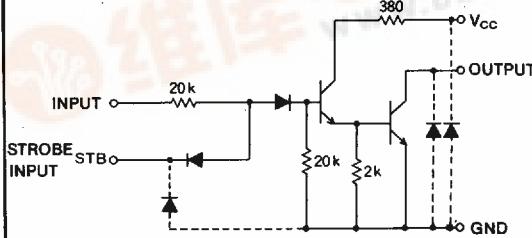

### PIN CONFIGURATION (TOP VIEW)

Outline 14P4

NC : No connection

### CIRCUIT SCHEMATIC

The diodes shown by broken line are  
parasite diodes and must not be used.

Unit : Ω
