VOLTAGE DETECTING, SYSTEM RESETTNG IC SERIES

## GENERAL DESCRIPTION

The M62703ML/SL is a voltage threshold detector designed for detection of a supply voltage and generation of a system reset pulse for almost all logic circuits such as microcontroller.

It has extensive applications including battery checking, level detecting and waveform shaping circuits.

## FEATURES

- Few external components
- Low operating threshold voltage (Supply voltage to keep a output low in a low supply operation)  
 ...0.65V(typ) at  $R_L = 22k$
- Wide supply voltage range ..... 2V to 7V
- High immunity to a sudden supply voltage change
- Wide application range
- Extra small 3-pin package (3-pin FLAT)

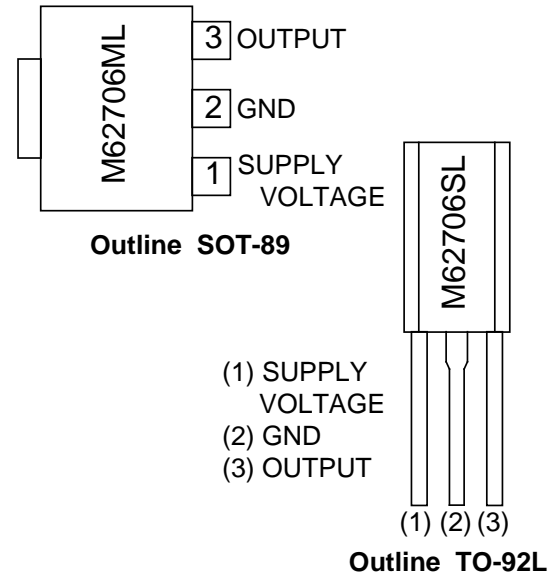

## APPLICATION

- Reset pulse generation for almost all logic circuits
- Battery checking, level detecting, waveform shaping circuits
- Delayed waveform generating circuit
- Switching circuit to a back-up power supply
- DC/DC converter
- Over voltage protection circuit

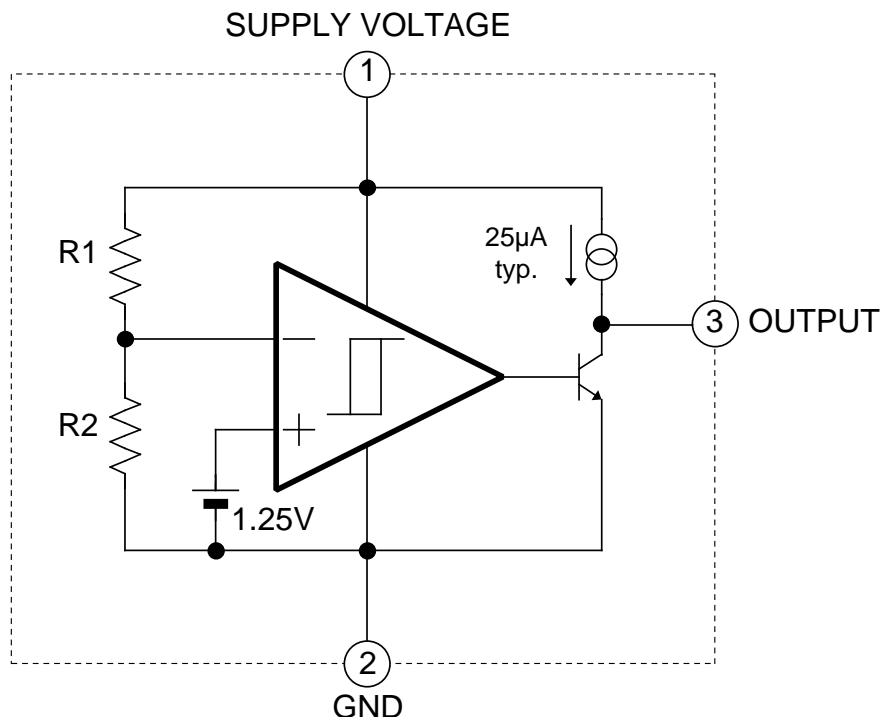

## RECOMMENDED OPERATING CONDITION

- Supply voltage range ..... 2V to 7V

## Example of application circuit Reset Circuit of M627XX Series

Note 1.

This IC can be used whether or not a pull-up resistor is included in the logic circuit.

Note 2.

The logic circuit preferably should not have a pull-down resistor. However in the case it has the resistor, the load resistor RL must be much less than the pull-down resistor. (refer to the above application circuit)
