

DC PIR CONTROLLER WITH REMOTE CONTROL

GENERAL DESCRIPTION 功能敘述

The M7613 is a low power PIR (passive infra-red) controller with remote control encoder , paired with M3DB,M3DT,M3D-95 for battery power door bell/alarm application. With special noise immunity technique , M7613 is the most stable PIR controller you can find on the market. More than this , there are few components needed in its application circuit which can reduce material cost and increase competitive.

FEATURES 產品特長

- High noise immunity.
- Low standby-by current < 90uA
- Drive either remote control
- Adjustable play on duration and latch duration.
- Has 12 bits tri-states address pin up to four data bits.
- On-chip voltage regulator.
- 20 second warm-up.
- CDS input conditionally.
- 18、 20 pin DIP or SOP package.

APPLICATIONS 產品應用

Motion Detector, Alarm system, Auto-door bell.

PIN DESCRIPTION

Pin Name	I/O	Description	Pin No.	
			18 Pins	20 Pins
A0~A3	I	Code Address pin Nos.0~3. There four tri-state pins are detected to determine the encoded waveform bit 0 ~ bit 3.Each pin can be set to "0","1" or "f"(floating).	1-4	1-4
A8/D0~A11/D3	I	Code Address pin Nos.8~11/Data pin Nos.0~3. There four tri-state pins are detected to determine the encoded waveform bit 8 ~ bit 11.When these pins are used as address pins, they can be set to "0","1" or "f"(floating).When these pins are used as data pins, they can be set only to "0"ot"1".	5-6	5-8
Rosc	I	Encoder system oscillator (Rosc=1.1Mohm,Typ.=38KHz)	7	9
VSS		System ground.	8	10
CDS	I	Connect to a CDS for inhibit , when Vinhi = 0 disable , Vinhi = 1 enable trigger	9	11
RTX	I	Delay timer oscillator input The delay time of receiving PIR signal to trigger Encoder or a high signal to trigger relay. The range for : RTX=2 K Ω ~ 5 M Ω CTX=100P~0.01UF FOR 100P or 0.01uf delay time=45000 R*C FOR 1000P delay time=35000 R*C Delay Time : 20 ms ~ 2250s Ex : CTX=100p , RTX=680K Ω , Delay Time=3.1s CTX=1000p , RTX=100K Ω , Delay Time=3.5s CTX=0.01uf , RTX=10K Ω , Delay Time=4.5s	10	12
RTI	I	Latch timer oscillator input The latch time ofthe range for : RTI=100 K Ω ~ 1 M Ω CTI=0.1UF(fix) Contain Time=35 R*C Contain time : > 0.5s ~ Ex : CTI=0.1uf , RTI=1M Ω , Contain Time=3.5s	11	13
UOU2	O	2 nd stage OP amp output.	12	14
II2	I	2 nd stage OP amp negative input.	13	15
NII1	I	1 st stage OP amp positive input.	14	16
II1	I	1 st stage OP amp negative input.	15	17
UOU1	I	1 st stage OP amp output.	16	18
DOUT	O	Data Output pin. The encoder waveform is serially outputted to this pin. When PIR is not detecting , DOUT output low (VSS) voltage	17	19
VDD		Operation voltage : 5V , Stand by current : 80~90uA	18	20

DC PIR CONTROLLER WITH REMOTE CONTROL

Encoder oscillator input pin, connect to external R to generate 38KHz Encoder frequency.

Fig.1 Encoder Oscillator

Delay timing and Latch timing oscillator input pin, connect to external RC to obtain desired delay duration.
Variable delay(latch) duration can be obtained by selecting various values of RC or using a variable resistor.

Fig.2 Timing Oscillator

The PIR signal amplifier needs a warm up period after power-on, so during this time the input should be disabled

Code Bit format

M7613 has a maximum of twelve (12) Address Bits including the four (4) Address/Data bits. The following diagram shows the code bits with their corresponding pis.

** One complete Code word **

First bit

	A0	A1	A2	A3	A4=0	A5=1	A6=0	A7=1	A10/D0	A11/D1	A12/D2	A13/D3	SYNC BIT
0 Data	A0	A1	A2	A3	0	1	0	1	A8	A9	A10	A11	
1 Data	A0	A1	A2	A3	0	1	0	1	A8	A9	A10	D3	
2 Data	A0	A1	A2	A3	0	1	0	1	A8	A9	D2	D3	
3 Data	A0	A1	A2	A3	0	1	0	1	A8	D1	D2	D3	
4 Data	A0	A1	A2	A3	0	1	0	1	D0	D1	D2	D3
