1 CHANNEL 8-BIT VIDEO A/D CONVERTER

MB40578

■ DESCRIPTION

The Fujitsu MB40578 is a low power ultra-high speed video A/D converter fabricated with Fujitsu Advanced Bipolar Technology. The MB40578 also adopts the fully-parallel comparison technique (flash method) for high speed convertion and can convert wide band analog signal such as video signal to digital signal at a sampling rate of DC through 20 Mega-samples/sec. Because of such high-speed poeration, the MB40578 is suitable for digital video applications such as the digital TV, video processing with computer, or radar signal processing.

■ ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Rating	Unit
Power supply voltage	V_{CCA} V_{CCD}	–0.5 to +7.0	V
Digital input voltage	V_{IND}	–0.5 to +7.0	V
Analog input voltage	V_{INA}	–0.5 to V_{CC}+0.5	V
Analog reference voltage	V_{RT}, V_{RB}	–0.5 to V_{CC}+0.5	V
Storage temperature	V_{STG}	–55 to +125	°C

Note: Permanent device damage may occur if the above Absolute Maximum Ratings are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
