

8-Bit Shift Register

The MC10E/100E141 is an 8-bit full-function shift register. The E141 performs serial/parallel in and serial/parallel out, shifting in either direction. The eight inputs D₀ – D₇ accept parallel input data, while DL/DR accept serial input data for left/right shifting. The Q_n outputs do not need to be terminated for the shift operation to function. To minimize noise and power, any Q output not used should be left unterminated.

- 700MHz Min. Shift Frequency
- 8-Bit
- Full-Function, Bi-Directional
- Asynchronous Master Reset
- Pin-Compatible with E241
- Extended 100E V_{EE} Range of – 4.2V to – 5.46V
- 75kΩ Input Pulldown Resistors

The select pins, SEL0 and SEL1, select one of four modes of operation: Load, Hold, Shift Left, Shift Right, according to the Function Table.

Input data is accepted a set-up time before the positive clock edge. A HIGH on the Master Reset (MR) pin asynchronously resets all the registers to zero.

Pinout: 28-Lead PLCC (Top View)

* All V_{CC} and V_{CCO} pins are tied together on the die.
