2.5V / 3.3V 1:10 Differential ECL/PECL/HSTL Clock Driver

Description

The MC100LVEP111 is a low skew 1-to-10 differential driver, designed with clock distribution in mind, accepting two clock sources into an input multiplexer. The PECL input signals can be either differential or single-ended (if the V_{BB} output is used). HSTL inputs can be used when the LVEP111 is operating under PECL conditions.

The LVEP111 specifically guarantees low output-to-output skew. Optimal design, layout, and processing minimize skew within a device and from device to device.

To ensure tightest skew, both sides of differential outputs identically terminate into 50 Ω even if only one output is being used. If an output pair is unused, both outputs may be left open (unterminated) without affecting skew.

The MC100LVEP111, as with most other ECL devices, can be operated from a positive V_{CC} supply in PECL mode. This allows the LVEP111 to be used for high performance clock distribution in +3.3 V or +2.5 V systems. Single-ended CLK input operation is limited to a $V_{CC} \ge$ 3.0 V in PECL mode, or $V_{EE} \le -3.0$ V in NECL mode. Designers can take advantage of the LVEP111's performance to distribute low skew clocks across the backplane or the board. In a PECL environment, series or Thevenin line terminations are typically used as they require no additional power supplies. For more information on using PECL, designers should refer to Application Note AN1406/D.

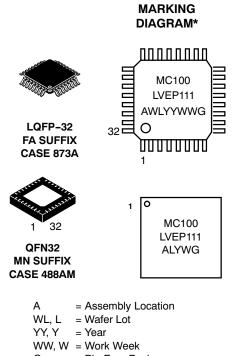

Features

- 85 ps Typical Device-to-Device Skew
- 20 ps Typical Output-to-Output Skew
- Jitter Less than 1 ps RMS
- Maximum Frequency > 3 GHz Typical
- V_{BB} Output
- 430 ps Typical Propagation Delay
- The 100 Series Contains Temperature Compensation
- PECL and HSTL Mode Operating Range: V_{CC} = 2.375 V to 3.8 V with V_{EE} = 0 V
- NECL Mode Operating Range: $V_{CC} = 0 V$ with $V_{EE} = -2.375 V$ to -3.8 V
- Open Input Default State
- LVDS Input Compatible
- Fully Compatible with MC100EP111
- Pb-Free Packages are Available

ON Semiconductor®

G = Pb-Free Package

*For additional marking information, refer to Application Note AND8002/D.

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 9 of this data sheet.

Warning: All V_{CC} and V_{EE} pins must be externally connected to Power Supply to guarantee proper operation.

Figure 1. LQFP-32 Pinout (Top View)

Table 1. PIN DESCRIPTION

	PIN	FUNCTION								
	CLK0*, CLK0**	ECL/PECL/HSTL CLK Input								
c	CLK1*, CLK1**	ECL/PECL/HSTL CLK Input								
7	Q0:9, <u>Q0:9</u>	ECL/PECL Outputs								
7	CLK_SEL*	ECL/PECL Active Clock Select Input								
,	V _{BB}	Reference Voltage Output								
3	V _{CC}	Positive Supply								
3	V _{EE}	Negative Supply								
9	EP	The exposed pad (EP) on the package								
9		bottom must be attached to a heat-sink-								
c		ing conduit. The exposed pad may only								
,0		be electrically connected to V_{EE} .								

* Pins will default LOW when left open.

** Pins will default to 2/3V_{CC} when left open.

Table 5. PECL DC CHARACTERISTICS V_{CC} = 2.5 V; V_{EE} = 0 V (Note 2)

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

2. Input and output parameters vary 1:1 with V_{CC}. V_{EE} can vary + 0.125 V to -1.3 V.

3. All loading with 50 Ω to V_{EE}. 4. Do not use V_{BB} at V_{CC} < 3.0 V.

5. VIHCMR min varies 1:1 with VEE, VIHCMR max varies 1:1 with VCC. The VIHCMR range is referenced to the most positive side of the differential input signal.
