NOTES

1. Normalized CTR degradation = $\frac{CTR_o - CTR}{CTR_o}$
2. The current transfer ratio (I_c/I_e) is the ratio of the detector collector current to the LED input current with V_{CE} at 10 volts.
3. The frequency at which I_c is 3 dB down from the 1 kHz value.
4. Rise time (t_r) is the time required for the collector current to increase from 10% of its final value to 90%.
Fall time (t_f) is the time required for the collector current to decrease from 90% of its initial value to 10%.
