TMOS POWER FETs  
 2 AMPERES  
 $R_{DS(on)} = 1.5 \text{ OHMS}$   
 200 VOLTS

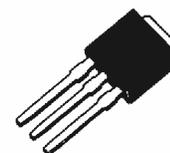

These TMOS Power FETs are designed for high speed, low loss power switching applications such as switching regulators, converters, solenoid and relay drivers.

- Silicon Gate for Fast Switching Speeds
- Low  $R_{DS(on)}$  — 1.5  $\Omega$  max
- Rugged — SOA is Power Dissipation Limited
- Source-to-Drain Diode Characterized for Use With Inductive Loads
- Low Drive Requirement —  $V_{GS(th)} = 4 \text{ V}$  max
- Surface Mount Package on 16 mm Tape
- Available With Long Leads, Add -1 Suffix

**MAXIMUM RATINGS**

Rating	Symbol	Value	Unit
Drain-Source Voltage	$V_{DS}$	200	Vdc
Drain-Gate Voltage ( $R_{GS} = 1 \text{ M}\Omega$ )	$V_{DGR}$	200	Vdc
Gate-Source Voltage — Continuous	$V_{GS}$	$\pm 20$	Vdc
— Non-repetitive ( $t_p \leq 50 \mu\text{s}$ )	$V_{GSM}$	$\pm 40$	Vpk
Drain Current — Continuous	$I_D$	2	Adc
— Pulsed	$I_{DM}$	11	
Total Power Dissipation @ $T_C = 25^\circ\text{C}$	$P_D$	25	Watts
Derate above $25^\circ\text{C}$		0.2	$\text{W}/^\circ\text{C}$
Total Power Dissipation @ $T_A = 25^\circ\text{C}$	$P_D$	1.25	Watts
Derate above $25^\circ\text{C}$		0.01	$\text{W}/^\circ\text{C}$
Total Power Dissipation @ $T_A = 25^\circ\text{C}$ (1)	$P_D$	1.75	Watts
Derate above $25^\circ\text{C}$		0.014	$\text{W}/^\circ\text{C}$
Operating and Storage Junction Temperature Range	$T_J, T_{stg}$	-65 to +150	$^\circ\text{C}$

**THERMAL CHARACTERISTICS**

Thermal Resistance — Junction to Case	$R_{\theta JC}$	5	$^\circ\text{C}/\text{W}$
	$R_{\theta JA}$	100	$^\circ\text{C}/\text{W}$
		71.4	
— Junction to Ambient			
— Junction to Ambient (1)			

(1) These ratings are applicable when surface mounted on the minimum pad size recommended.  
 Designer's Data for "Worst Case" Conditions — The Designer's Data Sheet permits the design of most circuits entirely from the information presented.  
 Limit curves — representing boundaries on device characteristics — are given to facilitate "worst case" design.

Figure 8. Maximum Rated Forward Biased Safe Operating Area

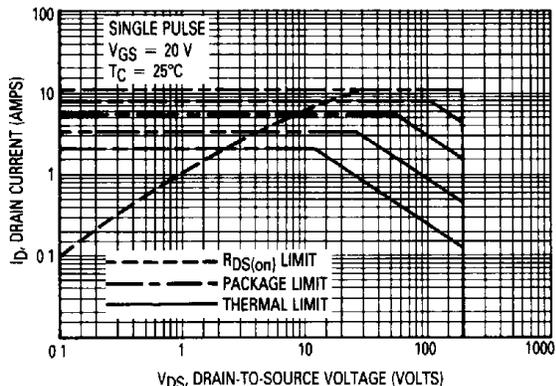

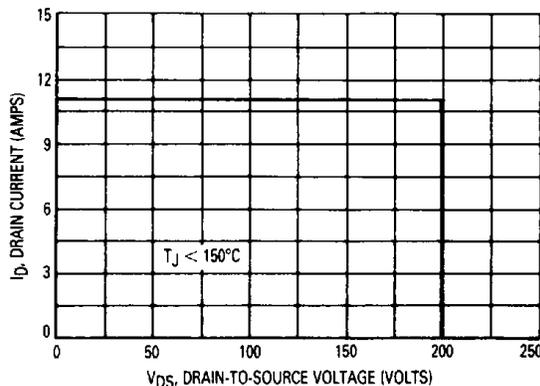

Figure 9. Maximum Rated Switching Safe Operating Area

**FORWARD BIASED SAFE OPERATING AREA**

The FBSOA curves define the maximum drain-to-source voltage and drain current that a device can safely handle when it is forward biased, or when it is on, or being turned on. Because these curves include the limitations of simultaneous high voltage and high current, up to the rating of the device, they are especially useful to designers of linear systems. The curves are based on a case temperature of 25°C and a maximum junction temperature of 150°C. Limitations for repetitive pulses at various case temperatures can be determined by using the thermal response curves. Motorola Application Note, AN569, "Transient Thermal Resistance-General Data and Its Use" provides detailed instructions.

**SWITCHING SAFE OPERATING AREA**

The switching safe operating area (SOA) of Figure 9 is the boundary that the load line may traverse without incurring damage to the MOSFET. The fundamental limits are the peak current,  $I_{DM}$  and the breakdown voltage,  $V_{(BR)DSS}$ . The switching SOA shown in Figure 9 is applicable for both turn-on and turn-off of the devices for switching times less than one microsecond.

The power averaged over a complete switching cycle must be less than:

$$\frac{T_{J(max)} - T_C}{R_{\theta JC}}$$
