## SIEMENS

## Bipolar IC

## Features

- Few external components
- Frequency and amplitude-stable balanced oscillator for VHF (I and II) and UHF
- Mixer stages with optimized suppression of oscillator and input frequency at IF-output
- Mixer with low intermodulation if large input signals are applied
- Balanced mixer with wide dynamic range and
 low-impedance inputs
- Internal band switch
- Low-noise, internal reference voltage

| Type | Ordering Code | Package |
| :--- | :--- | :--- |
| MTI 3006X | Q67000-A5152 | P-DSO-20-1 (SMD) |
| MTI 3006X | Q67006-A5152 | P-DSO-20-1 Tape \& Reel (SMD) |

## Functional Description and Application

This integrated circuit permits the design of TV-tuners covering the entire frequency range from $48 \ldots 900 \mathrm{MHz}$ split into 2 parts with 3 frequency bands.
The application is suitable for all tuners in TV-and VCR-sets.

## Circuit Description

This IC includes 2 balanced mixers (double balanced mixer/ring mixer), two balanced oscillators for VHF (I and II) and UHF, a reference voltage source and band switch.
Filters between tuner input and IC separate the TV-frequency signal into two bands. The band switch ensures that only one band at a time is activated. In the activated band the signal passes a frontend stage with MOSFET-amplifier, a double-tuned bandpass filter and is then fed to the activated balanced mixer input of the IC which is a low-impedance stage for the VHF- and UHF-range, respectively.
The input signal is mixed there with the oscillator signal from the activated oscillator section and fed to a common IF-stage for all bands.

## Pin Configuration

(top view)

Pin Definitions and Functions

| Pin No. | Symbol | Function |
| :--- | :--- | :--- |
| 1 | GND | Ground |
| 2 | UHF Osc. Input 1 | UHF-oscillator amplifier, high-impedance base input, <br> symmetrical to pin 5 |
| 3 | UHF Osc. Output 1 | UHF-oscillator amplifier, high-impedance collector <br> output, symmetrical to pin 4 |

## SIEMENS

| Pin Definitions and Functions (cont'd) |  |  |
| :--- | :--- | :--- |
| Pin No. | Symbol | Function |
| 4 | UHF Osc. Output 2 | UHF-oscillator amplifier, high-impedance collector <br> output, symmetrical to pin 3 |
| 5 | UHF Osc. Input 2 | UHF-oscillator amplifier, high-impedance base input, <br> symmetrical to pin 2 |
| 6 | VHF Osc. Input 1 | VHF-oscillator amplifier, high-impedance base input, <br> symmetrical to pin 9 |
| 7 | VHF Osc. Output 1 | VHF-oscillator amplifier, high-impedance collector <br> output, symmetrical to pin 8 |
| 8 | VHF Osc. Output 2 | VHF-oscillator amplifier, high-impedance collector <br> output, symmetrical to pin 7 |
| 9 | VHF Osc. Input 2 | VHF-oscillator amplifier, high-impedance base input, <br> symmetrical to pin 6 |
| 10 | Band Switching | VHF/UHF-band switching |
| 11 | Mixer Output 1 | Open collector mixer output, high-impedance, <br> symmetrical to pin 12 |
| 12 | Mixer Output 2 | Open collector mixer output, high-impedance, <br> symmetrical to pin 11 |
| 13 | + VS | Supply voltage |
| 14 | VHF Input 1 | VHF-mixer input low-impedance, symmetrical to pin 15 |
