

**1N3305 thru
1N3350B
and
1N4549B thru
1N4556B**

FEATURES

- ZENER VOLTAGE 3.9 TO 200V
- LOW ZENER IMPEDANCE
- HIGHLY RELIABLE AND RUGGED
- FOR MILITARY AND OTHER DEMANDING APPLICATIONS (See Below)

MAXIMUM RATINGS

Junction and Storage Temperatures: -65°C to $+175^{\circ}\text{C}$
 DC Power Dissipation: 50 Watts
 Power Derating: 0.5 W/ $^{\circ}$ above 75°C
 Forward Voltage @ 10 A: 1.5 Volts

***ELECTRICAL CHARACTERISTICS @ 30°C Case Temperature**

MECHANICAL CHARACTERISTICS

CASE: Industry Standard DO-5, 11/16" Hex. stud with 1/4-28 threads, welded, hermetically sealed metal and glass.

DIMENSIONS: See outline drawing Fig. 1.

FINISH: All external surfaces are corrosion resistant and terminal solderable.

THERMAL RESISTANCE: 1.5°C/W (Typical) junction to stud.

POLARITY: Standard polarity anode to case. Reverse polarity (cathode to case) indicated by suffix R.

MOUNTING HARDWARE: See page 2-9.

1N3305 thru 1N3350B, 1N4549B thru 1N4556B

NOTE 1

When using JEDEC numbers an R suffix should be used to signify reversed polarity. The suffixes A and B indicate tolerances of 10% and 5% respectively. No suffix or just R denotes $\pm 20\%$ tolerance. Example: 1N3319RB is a REVERSED polarity, 20 volt unit having a $\pm 5\%$ tolerance on Zener Voltage.

NOTE 2

Zener Voltage (V_z) is measured with junction in thermal equilibrium with 30°C stud temperature.

NOTE 3

The zener impedance is derived from the 60 cycle A.C. voltage, which results when an A.C. current having an R.M.S. value equal to 10% of the D.C. zener current (I_{zt} or I_{zk}) is superimposed on I_{zt} or I_{zk} . Zener impedance is measured at 2 points to insure a sharp knee on the breakdown curve and to eliminate unstable units. A curve showing the variation of zener impedance vs. zener current for three representative types is shown in Figure 3.
