

TAZ

FEATURES

- 1500 WATTS PEAK POWER DISSIPATION
- AVAILABLE IN STANDOFF VOLTAGES FROM 5.5V TO 185V
- DO-13 HERMETICALLY SEALED PACKAGE
- BIDIRECTIONAL
- UL RECOGNIZED (1N6070A)
- JAN/TX/TXV AVAILABLE PER MIL-S-19500/507

DESCRIPTION

These TAZ devices are a series of Bidirectional Silicon Transient Suppressors used in AC applications where large voltage transients can permanently damage voltage-sensitive components.

These devices are manufactured using two silicon PN, low voltage junction in a back to back configuration. They are characterized by their high surge capability, extremely fast response time, and low impedance, (R_{on}).

TAZ has a peak pulse power rating of 1500 watts for one millisecond and therefore can be used in applications where induced lightning on rural or remote transmission lines represents a hazard to electronic circuitry. The response time of TAZ clamping action is less than (5×10^{-9}) sec; therefore, they can protect Integrated Circuits, MOS devices, Hybrids, and other voltage-sensitive semi-conductors and components.

This series of devices has been proven very effective as EMP Suppressors.

MAXIMUM RATINGS

- 1500 watts of peak pulse power dissipation at 25°C
- $t_{clamping}$ (0 volts to $V_{(BR)}$ min): less than 5×10^{-9} seconds
- Operating and storage temperatures -65°C to +175°C
- Steady state power dissipation: 1.0 watts at $T_L = 25^\circ C$, 3/8" from body.
- Repetition rate (duty cycle): .01%

ELECTRICAL CHARACTERISTICS

Clamping Factor: 1.33 @ full rated power
1.20 @ 50% rated power

Clamping Factor: The ratio of the actual V_C (Clamping Voltage) to the $V_{(BR)}$ (Breakdown Voltage) as measured on a specific device.

**BIDIRECTIONAL
TRANSIENT
ABSORPTION ZENER**

MECHANICAL CHARACTERISTICS

- Standard DO-13 package, glass and metal hermetically sealed
- WEIGHT: 1.5 grams (approximate)
- FINISH: All external surfaces are corrosion resistant and leads solderable.
- POLARITY: Bidirectional not marked.
- MOUNTING POSITION: Any.

*Available in JAN, JANTX, JANTXV

NOTE 1: A TAZ is normally selected according to the rated "Stand Off Voltage" V_{RM} which should be equal to or greater than the DC or continuous peak operating voltage level.
