

**NBB-312**

**CASCADABLE BROADBAND  
GaAs MMIC AMPLIFIER DC TO 12GHz**

**Typical Applications**

- Narrow and Broadband Commercial and Military Radio Designs
- Linear and Saturated Amplifiers
- Gain Stage or Driver Amplifiers for MWRadio/Optical Designs (PTP/PMP/LMDS/UNII/VSAT/WLAN/Cellular/DWDM)

**Product Description**

The NBB-312 cascadable broadband InGaP/GaAs MMIC amplifier is a low-cost, high-performance solution for general purpose RF and microwave amplification needs. This 50Ω gain block is based on a reliable HBT proprietary MMIC design, providing unsurpassed performance for small-signal applications. Designed with an external bias resistor, the NBB-312 provides flexibility and stability. The NBB-310 is packaged in a low-cost, surface-mount ceramic package, providing ease of assembly for high-volume tape-and-reel requirements. It is available in either 1,000 or 3,000 piece-per-reel quantities. Connectorized evaluation board designs optimized for high frequency are also available for characterization purposes.

Notes:  
1. Solder pads are coplanar to within ±0.025 mm.  
2. Lid will be centered relative to frontside metallization with a tolerance of ±0.13 mm.  
3. Mark to include two characters and dot to reference pin 1.

**Package Style: MPGA, Bowtie, 3x3, Ceramic**

**Features**

- Reliable, Low-Cost HBT Design
- 12.5dB Gain
- High P1dB of +15.8dBm at 6GHz
- Single Power Supply Operation
- 50Ω I/O Matched for High Frequency Use

Pin	Function	Description	Interface Schematic
1	GND	Ground connection. For best performance, keep traces physically short and connect immediately to ground plane.	
2	GND	Same as pin 1.	
3	GND	Same as pin 1.	
4	RF IN	RF input pin. This pin is NOT internally DC blocked. A DC blocking capacitor, suitable for the frequency of operation, should be used in most applications. DC coupling of the input is not allowed, because this will override the internal feedback loop and cause temperature instability.	
5	GND	Same as pin 1.	
6	GND	Same as pin 1.	
7	GND	Same as pin 1.	
8	RF OUT	<p>RF output and bias pin. Biasing is accomplished with an external series resistor and choke inductor to <math>V_{CC}</math>. The resistor is selected to set the DC current into this pin to a desired level. The resistor value is determined by the following equation:</p> $R = \frac{(V_{CC} - V_{DEVICE})}{I_{CC}}$ <p>Care should also be taken in the resistor selection to ensure that the current into the part never exceeds maximum datasheet operating current over the planned operating temperature. This means that a resistor between the supply and this pin is always required, even if a supply near 8.0V is available, to provide DC feedback to prevent thermal runaway. Alternatively, a constant current supply circuit may be implemented. Because DC is present on this pin, a DC blocking capacitor, suitable for the frequency of operation, should be used in most applications. The supply side of the bias network should also be well bypassed.</p>	<p>The schematic shows the RF OUT pin connected to a bias network. A series resistor is connected between the supply and the pin. A choke inductor is connected between the supply and the pin. A DC blocking capacitor is connected between the pin and ground. The RF IN pin is also shown with a similar bias network.</p>
9	GND	Same as pin 1.

## Typical Bias Configuration

Application notes related to biasing circuit, device footprint, and thermal considerations are available on request.

Recommended Bias Resistor Values					
Supply Voltage, $V_{CC}$ (V)	8	10	12	15	20
Bias Resistor, $R_{CC}$ ( $\Omega$ )	60	100	140	200	300

## Application Notes

### Bonding Temperature (Wedge or Ball)

It is recommended that the heater block temperature be set to  $160^{\circ}\text{C} \pm 10^{\circ}\text{C}$ .

## **Extended Frequency InGaP Amplifier Designer's Tool Kit NBB-X-K1**

This tool kit was created to assist in the design-in of the RFMD NBB- and NLB-series InGaP HBT gain block amplifiers. Each tool kit contains the following.

- 5 each NBB-300, NBB-310 and NBB-400 Ceramic Micro-X Amplifiers
- 5 each NLB-300, NLB-310 and NLB-400 Plastic Micro-X Amplifiers
- 2 Broadband Evaluation Boards and High Frequency SMA Connectors
- Broadband Bias Instructions and Specification Summary Index for ease of operation
