

Quad high-performance operational amplifier

NE/SE5514

DESCRIPTION

The NE/SE5514 family of quad operational amplifiers sets new standards in bipolar quad amplifier performance. The amplifiers feature low input bias current and low offset voltages. Pinout is identical to LM324/LM348 which facilitates direct product substitution for improved system performance in dual supply applications. Output characteristics are similar to a μA741 with improved slew and drive capability.

FEATURES

- Low input bias current: $<\pm 3\text{nA}$
- Low input offset current: $<\pm 3\text{nA}$
- Low input offset voltage: $<1\text{mV}$
- Low supply current: $1.5\text{mA}/\text{A}$
- $1\text{V}/\mu\text{s}$ slew rate
- High input impedance: $100\text{M}\Omega$
- High common-mode impedance: $10\text{G}\Omega$
- Internal compensation for unity gain
- 600Ω drive capability (7VRMS)

APPLICATIONS

- AC amplifiers
- RC active filters
- Transducer amplifiers
- DC gain block
- Instrumentation amplifier
