

## Fusible, Non-Flammable Resistors

### FEATURES

- Overload protection without risk of fire
- Wide range of overload currents.

### APPLICATIONS

- Audio
- Video.

A homogeneous film of metal alloy is deposited on a high grade ceramic body. After a helical groove has been cut in the resistive layer, tinned connecting wires of electrolytic copper are welded to the end-caps. The resistors are coated with a grey, flame retardant lacquer which provides

electrical, mechanical, and climatic protection. The encapsulation is resistant to all cleaning solvents in accordance with "MIL-STD-202E, method 215", and "IEC 60068-2-45".

## ORDERING INFORMATION

### Numeric Ordering Code (12NC)

- The resistors have a 12-digit ordering code starting with 23
- The subsequent 7 digits indicate the resistor type and packaging.
- The remaining 3 digits indicate the resistance values:
  - The first 2 digits indicate the resistance value.
  - The last digit indicates the resistance decade.

### Last Digit of 12NC Indicating Resistance Decade

RESISTANCE DECADE	LAST DIGIT
0.22 to 0.91 $\Omega$	7
1 to 9.1 $\Omega$	8
10 to 91 $\Omega$	9
100 to 910 $\Omega$	1
1 to 9.1 k $\Omega$	2
10 to 15 k $\Omega$	3

### Ordering Example

The ordering code for a NFR25 resistor with value 750  $\Omega$ , supplied on a bandolier of 1000 units in ammpack is: 2322 205 13751.

## DIMENSIONS

### DIMENSIONS - resistor types and relevant physical dimensions

TYPE	ØD MAX.	L <sub>1</sub> MAX.	L <sub>2</sub> MAX.	Ød
NFR25	2.5	6.5	7.5	0.58 ±0.05
NFR25H				

### MASS PER 100 UNITS

TYPE	MASS (g)
NFR25	21
NFR25H	22

For ease of recognition a fifth ring is added, which is violet for type NFR25 and white for type NFR25H.

### OUTLINES

The length of the body (L<sub>1</sub>) is measured by inserting the leads into holes of two identical gauge plates and moving these plates parallel to each other until the resistor body is clamped without deformation ("IEC publication 60294").

## MARKING

The nominal resistance and tolerance are marked on the resistor using four coloured bands in accordance with IEC publication 60062 "Colour codes for fixed resistors".

## FUNCTIONAL PERFORMANCE

### PRODUCT CHARACTERIZATION

Standard values of nominal resistance are taken from the E24 series for resistors with a tolerance of ±5%. The values of the E24 series are in accordance with "IEC publication 60063".

### LIMITING VALUES

TYPE	LIMITING VOLTAGE <sup>(1)</sup> (V)	LIMITING POWER (W)
NFR25	250	0.33
NFR25H	350	0.5

#### Note

1. The maximum voltage that may be continuously applied to the resistor element, see "IEC publication 60115-1". The maximum permissible hot-spot temperature is 155 °C.

The power that the resistor can dissipate depends on the operating temperature.

Maximum dissipation ( $P_{\max}$ ) in percentage of rated power as a function of the ambient temperature ( $T_{\text{amb}}$ ).

**TESTS AND REQUIREMENTS**

Essentially all tests are carried out in accordance with the schedule of "IEC publication 60115-1", category LCT/UCT/56 (rated temperature range: Lower Category Temperature, Upper Category Temperature; damp heat, long term, 56 days). The testing also covers the requirements specified by EIA and EIAJ.

The tests are carried out in accordance with IEC publication 60068-2, "Recommended basic climatic and mechanical robustness testing procedure for electronic components" and under standard atmospheric conditions according to "IEC 60068-1", subclause 5.3.

In the Test Procedures and Requirements table the tests and requirements are listed with reference to the relevant clauses of "IEC publications 60115-1 and 60068-2"; a short description of the test procedure is also given. In some instances deviations from the IEC recommendations were necessary for our method of specifying. For inflammability requirements reference is made to "IEC 60115-1" and to "EN 140000, appendix D".

All soldering tests are performed with mildly activated flux.
