NTE1380 Integrated Circuit Audio Power Amplifier, 14W

Description:

The NTE1380 is a monolithic integrated circuit in a 5-Lead TO220 type package intended for use as an audio class AB amplifier. Typically, it provides 14W output power (THD = 0.5%) at $V_S = \pm 14V/4\Omega$. This device provides high output current and has very low harmonic and cross-over distortion. Further, the NTE1380 incorporates a short circuit protection system comprising an arrangement for automatically limiting the dissipated power so as to keep the working point of the output transistors within their safe operating area. A thermal shut-down system is also included.
