OP-08

PRECISION LOW-INPUT-CURRENT OPERATIONAL AMPLIFIER

Precision Monolithics Inc.

FEATURES

- Low Offset Voltage 150 μ V Max
- Low Offset Voltage Drift 2.5 μ V/ $^{\circ}$ C Max
- Five Times PM108A Output Current 5mA Min
- Low Offset Current 200pA Max
- Low Bias Current 2nA Max
- Low Power Consumption 18mW Max @ \pm 15V
- High Common-Mode Input Range \pm 13.5V Min
- MIL-STD-883 Class B Processing Available
- Silicon-Nitride Passivation
- 125 $^{\circ}$ C Temperature-Tested Dice
- Available in Die Form

ORDERING INFORMATION [†]

$T_A = 25^{\circ}\text{C}$ V_{OS} MAX (mV)	PACKAGE		OPERATING TEMPERATURE RANGE
	CERDIP 8-PIN	PLASTIC 8-PIN	
0.15	OP08AZ	—	MIL
0.15	—	OP08EP	COM
1.0	OP08GZ	—	COM

[†] Burn-in is available on commercial and industrial temperature range parts in CerDIP and plastic DIP packages. For ordering information, see 1990/91 Data Book, Section 2.

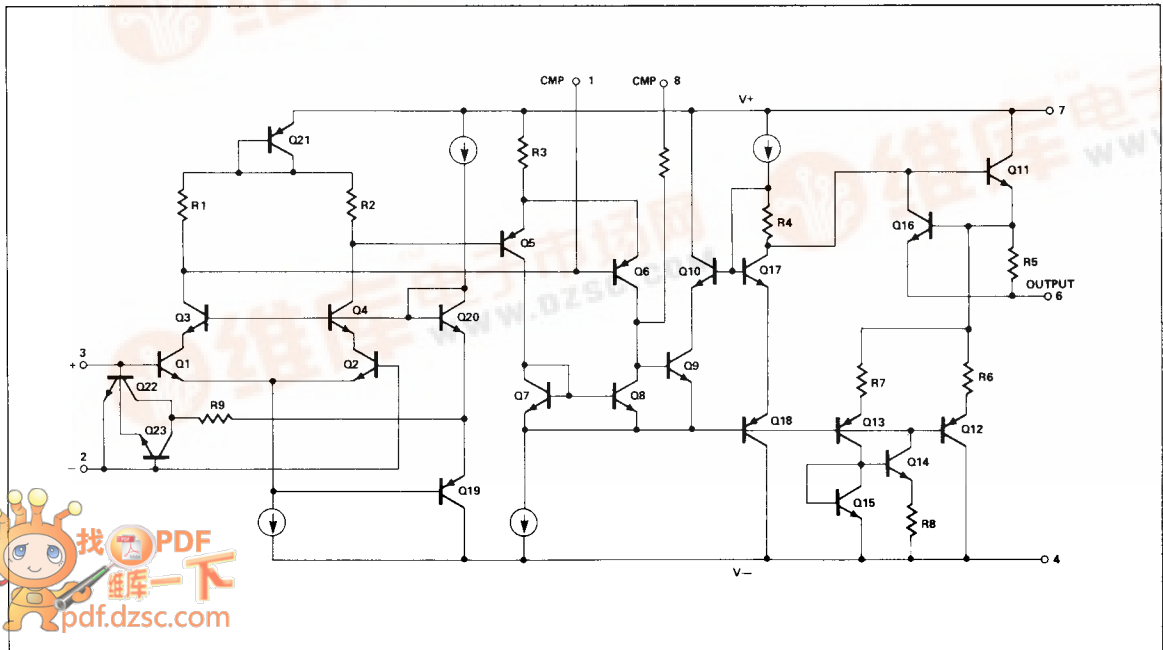

GENERAL DESCRIPTION

The PMI OP-08 is an improved version of the popular LM108A low-power op amp. Excellent performance is achieved by applying PMI's ion-implanted super-beta process and on-chip-zener-zap trimming. The OP-08 has a three-times lower offset voltage and a two-times lower offset voltage drift. Worst-case input offset voltage over -55°C to $+125^{\circ}\text{C}$ for the OP-08 is only 350 μ V. In addition, the OP-08 has five times the output current capability of the 108A. For an op amp with identical specifications plus internal frequency compensation, see the OP-12 data sheet.

PIN CONNECTIONS

SIMPLIFIED SCHEMATIC

OPERATIONAL AMPLIFIERS/BUFFERS

**ABSOLUTE MAXIMUM RATINGS** (Note 4)

Supply Voltage	OP-08A, OP-08E (All DICE Except GR) ±20V
	OP-08G (GR DICE Only) ±18V
Differential Input Current (Note 1)	±10mA
Input Voltage (Note 2)	±15V
Output Short-Circuit Duration	Indefinite
Operating Temperature Range	OP-08A -55°C to +125°C
	OP-08E, OP-08G 0°C to +70°C
Storage Temperature Range (Z)	-65°C to +150°C
Storage Temperature Range (P)	-65°C to +125°C
Lead Temperature (Soldering, 60 sec)	300°C
DICE Junction Temperature (T _j)	-65°C to +150°C

PACKAGE TYPE	θ_{JA} (Note 3)	θ_{JC}	UNITS
8-Pin Hermetic DIP (Z)	162	26	°C/W
8-Pin Plastic DIP (P)	110	50	°C/W

NOTES:

- The inputs are shunted with back-to-back diodes for overvoltage protection. Therefore, excessive current will flow if a differential input voltage in excess of 1V is applied between the inputs without some limiting resistance.
- For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.
- θ_{JA} is specified for worst case mounting conditions, i.e., θ_{JA} is specified for device in socket for CerDIP and P-DIP packages.
- Absolute maximum ratings apply to both DICE and packaged parts, unless otherwise noted.

ELECTRICAL CHARACTERISTICS at T_A = +25°C, V_S = ±20V for A and E Grades, V_S = ±15V for G Grade, unless otherwise noted. Compensation capacitor = 30pF.

NOTES:

1. For 25°C characteristics of NT & GT devices, see N & G characteristics, respectively.
2. Guaranteed by input bias current.

Electrical tests are performed at wafer probe to the limits shown. Due to variations in assembly methods and normal yield loss, yield after packaging is not guaranteed for standard product dice. Consult factory to negotiate specifications based on dice lot qualification through sample lot assembly and testing.

TYPICAL ELECTRICAL CHARACTERISTICS at $V_S = \pm 15V$, unless otherwise noted.

APPLICATIONS INFORMATION

The OP-08 series has very low input offset and bias currents; the user is cautioned that printed circuit board leakage currents can produce significant errors, especially at high board temperatures. Careful attention to board layout and cleaning procedure is needed to take full advantage of the OP-08 performance. Board leakage is minimized by encircling the input pins with a guard ring maintained at the same potential as the inputs. This guard ring should be driven by a low impedance source, such as an amplifier's output or ground.
