

OZ990

Intelligent Manager Smart PMU/GPIO

FEATURES

- SMBus 1.0 Compliant
- Support Pentium class and x86-based designs
- PMU, GPIO, and Alternative PMU modes
- WAKE output and Suspend Status input operates synchronously with PMU in notebook chipsets
- LOW power-saving Suspend mode
- Hardware Debounced Wakeup/Suspend input as pushbutton
- 4 Power Control programmable outputs with builtin Power Sequencing at 10 ms to 1 second programmable intervals
- Optional Wakeup-Disable inputs
- Optional Power-On inputs
- 8 programmable interrupt inputs for SMIEVENT or SMBALERT#
- 8 Suspend/Wakeup edge-triggered programmable inputs
- 20 possible programmable edge-sensitive General Purpose Inputs/Outputs
- 8 Auto LED Flash(ALF) programmable outputs with 10% or 50% duty cycles
- LOW power hardware driven speaker alarm output
- Up to 6 programmable unique addresses for device cascade
- 8 power-on modularized hardware ID programmable inputs
- 32KHz operating frequency
- 5 V tolerant inputs
- Supports both 3.3 V and 5 V operating environments
- Software programming kit available

ORDERING INFORMATION

0Z990S - 28 SSOP

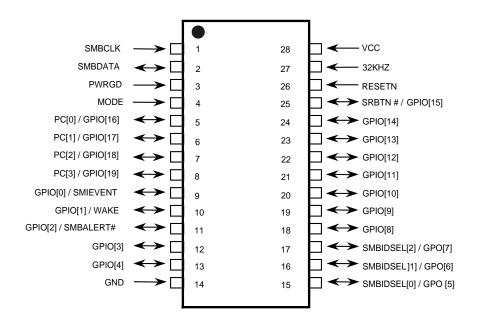

GENERAL DESCRIPTION

O2Micro's OZ990 Smart PMU/GPIO (Power Management Unit/General Purpose Input Output) unit allows the implementation of Green PC Desktop Chipsets in notebook designs at considerably lower cost than conventional methods while closing the technology gap between desktop and notebook computers by offering an extensive number of powerful power management and general purpose I/O features. With the OZ990 stand-alone PMU capability, the ability to provide the One-Shot Design for PMU/BIOS practically eliminates the need to redesign PMUs to match the ever-changing core logic chipsets. The OZ990 provides the perfect solution for leading notebook vendors to stay ahead of the competition.

The OZ990 is an SMBus 1.0 compliant device with 4 Power Control and 16 Programmable General Purpose I/Os pins flexible for a variety of functions Power Control with such as sequencing. programmable inputs/outputs, SMB/SMI interrupt service, power-saving, Suspend/Wakeup, modularized hardware ID, and Auto LED Flash (ALF) status display. Other features include hardware-driven speaker alarm output and Suspend/Wakeup button.

As a Pentium class and x86-based system compatible device, the OZ990 is a highly cost-effective and practical solution for today's notebook and palmtop computers, pen-based data systems, personal digital assistants, and portable data-collection terminals.

PIN ASSIGNMENT

PIN CONFIGURATION

| Name | Pin No. | Туре | Input | Drive | Definition | | | | | |
|-------------|--|---|-----------------|--------------------|--|--|--|--|--|--|
| SMBCLK | 1 | i | TTL | - | SMBus Clock Input | | | | | |
| | SMBus Clock Input for SMBus protocol communication. | | | | | | | | | |
| SMBDATA | 2 | I/O | TTL | 12mA | SMBus Data Input/Output | | | | | |
| | SMBus Data Input/Output for SMBus protocol communication. | | | | | | | | | |
| PWRGD | 3 | I | TTL | ı | Host System Power Good | | | | | |
| | This pin indicates that the host system's power, including the Core Logic chipsets, is stable. Before the host | | | | | | | | | |
| | | system's power is stable, this input pin will tri-state all the output pins from OZ990 with the exception of the | | | | | | | | |
| | | • | | | ines whether the OZ990 is in PMU or Alternate | | | | | |
| | | PMU mode when RESETN is active. When pin MODE=1 and pin PWRGD=0, the OZ990 is in PMU mode. When pin MODE=1 and pin PWRGD=1, the OZ990 is in Alternate PMU mode. | | | | | | | | |
| MODE | when pin wod | E=1 and pin i | TTL | J2990 IS IN AIT | | | | | | |
| MODE | The O7000 has | l 2 mades of | | - /with 20 CDIO | OZ990 Mode Input | | | | | |
| | The OZ990 has 3 modes of operation: GPIO(with 20 GPIOs available), PMU(with 16 GPIOs available), and Alternate PMU(with 16 GPIOs available). To use the OZ990 as a PMU, tie MODE pin to VDD and set | | | | | | | | | |
| | | | | | to VDD and set PWRGD HIGH. For GPIO-only | | | | | |
| | | | , | | · 1 | | | | | |
