

# LC86P5420

## 8-Bit Single Chip Microcontroller with the One-Time Programmable PROM

### Preliminary

#### Overview

The LC86P5420 is a CMOS 8-bit single chip microcontroller with one-time PROM for the LC865500 / LC865400 series.

This microcontroller has the function and the pin description of the LC865500 / LC865400 series mask ROM version, and the 20K-byte PROM.

#### Features

- (1) Option switching by PROM data

The option function of the LC865400 series can be specified by the PROM data.

The LC86P5420 can be checked the functions of the trial pieces using the mass production board.

- (2) Internal one-time PROM capacity : 20736 bytes  
(3) Internal RAM capacity : 512 bytes

Mask ROM version	PROM capacity	RAM capacity
LC865520	20480 bytes	512 bytes
LC865516	16384 bytes	512 bytes
LC865512	12288 bytes	512 bytes
LC865508	8192 bytes	512 bytes
LC865504	4096 bytes	512 bytes
LC865412	12288 bytes	224 bytes
LC865408	8192 bytes	224 bytes
LC865404	4096 bytes	224 bytes

- (4) Operating supply voltage : 4.5V to 6.0V  
(5) Instruction cycle time : 1.0μs to 366μs  
(6) Operating temperature : -30°C to +70°C  
(7) The pin and the package compatible with the LC865400 series mask ROM devices  
(8) Applicable mask ROM version : LC865520 / LC865516 / LC865512 / LC865508 / LC865504  
LC865412 / LC865408 / LC865404  
(9) Factory shipment : DIP42S, QFP48E

- Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.
- SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

## Notice for use

The LC86P5420 is provided for the first release and small shipping of the LC865500 / LC865400 series.  
At using, take notice of the followings.

(1) A point of difference the LC86P5420 and the LC865500 / LC865400 series

Item	LC86P5420	LC865520 / 16 / 12 / 08 / 04 LC865412 / 08 / 04
Operation after reset releasing	The option is specified by degrees until 3ms after going to a 'H' level to the reset terminal. The program is executed from 00H of the program counter.	The program is executed from 00H of the program counter immediately after going to a 'H' level to the reset terminal.
Operating supply voltage range (VDD)	4.5V to 6.0V	2.5V to 6.0V
Power dissipation	Refer to 'electrical characteristics' on the semiconductor news.	

The LC86P5420 functions same as the followings while resetting ; LC865520 / 16 / 12 / 08 / 04, LC865412 / 08 / 04.

The LC86P5420 uses 256 bytes that is addressed on 7F00H to 7FFFH in the program memory as the option configuration data area.

•A kind of the option corresopnding of the LC86P5420

A kind of option	Pins, Circuits	Contents of the option
Input / output form of input / output ports	Port 0	1. N-channel open drain output 2. CMOS output *1
		1. Pull-up MOS Tr. provided 2. Pull-up MOS Tr. not provided *2
	Port 1 *1	1. Input : Programmable pull-up MOS Tr. Output : N-channel open drain 2. Input : Programmable pull-up MOS Tr. Output : CMOS
	Port 3 *1	1. Input : No Programmable pull-up MOS Tr. Output : N-channel open drain 2. Input : Programmable pull-up MOS Tr. Output : CMOS

\*1) Specified in bit

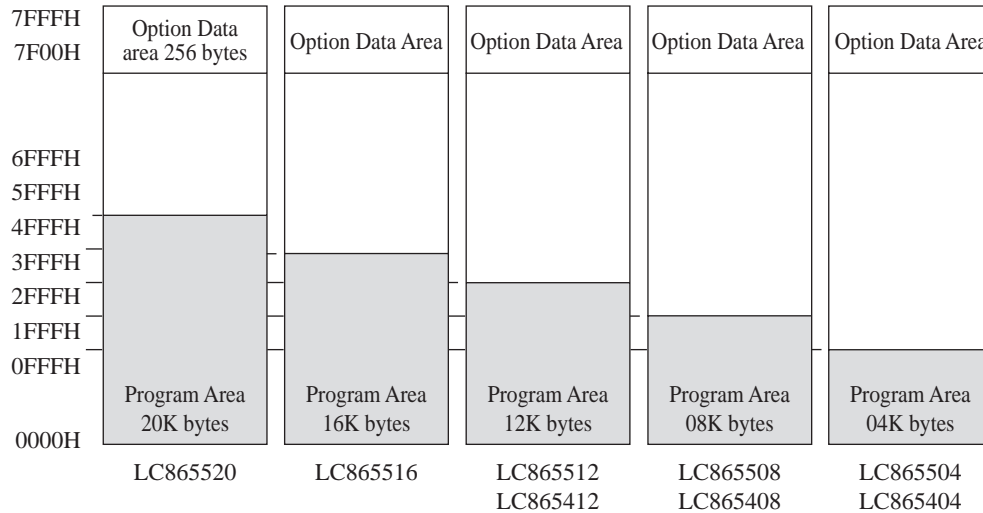

\*2) Specified in nibble unit. Pull-up MOS Tr. is not provided in N-channel open drain output port.

(2) Option

The option data is created by the option specified program "SU86K.EXE". The created option data is linked to the program area by the linkage loader "L86K.EXE".

(3) ROM space

The LC86P5420 and LC865500 / LC865400 series use 256 bytes that is addressed on 7F00H to 7FFFH in the program memory as the option specified data area. These program memory capacity are 20480 bytes that is addressed on 0000H to 4FFFH.

(4) Ordering information

- When ordering the identical mask ROM and PROM devices simultaneously.  
Provide an EPROM containing the target memory contents together with the separate order forms for each of the mask ROM and PROM versions.
- When ordering a PROM device.  
Provide an EPROM containing the target memory contents together with an order form.

## How to use

(1) Create a programming data for LC86P5420

Programming data for EPROM of the LC86P5420 is required.  
Debugged evaluation file (EVA file) must be converted to an INTEL-HEX formatted file (HEX file) with file converter program, EVA2HEX.EXE. The HEX file is used as the programming data for the LC86P5420.

(2) How to program for the EPROM

The LC86P5420 can be programmed by the EPROM programmer with attachment ; W86EP5420D, W86EP5420Q.

- Recommended EPROM programmer

Product	EPROM programmer
Advantest	R4945, R4944, R4943
Andou	AF-9704
AVAL	PKW-1100, PKW-3000
Minato electronics	MODEL1890A

- "27512 (Vpp=12.5V) Intel high speed programming" mode available. The address must be set to "0000H to 7FFFH" and a jumper (DASEC) must be set to 'OFF' at programming.

### (3) How to use the data security function

"Data security" is the disabled function to read the data of the EPROM.

The following is the process in order to execute the data security.

1. Set 'ON' the jumper of attachment.
2. Program again. Then the EPROM programmer displays the error. The error means normally activity of the data security. It is not a trouble of the EPROM programmer or the LSI.

#### Notes

- Data security is not executed when the data of all address have 'FFH' at the sequence 2 above.
- The programming by a sequential operation "BLANK=>PROGRAM=>VERIFY" cannot be executed data security at the sequence 2 above.
- Set 'OFF' to the jumper after executing the data security.

Current dissipation HALT mode (Note 4)	IDDHALT(1)	VDD	<ul style="list-style-type: none"> <li>•HALT mode</li> <li>•FmCF=6MHz</li> <li>•Ceramic resonator oscillation</li> <li>•FsXtal=32.768kHz</li> <li>•crystal oscillation</li> <li>•System clock : CF oscillation</li> <li>•Internal RC oscillation stops.</li> <li>•1 / 1 divider</li> </ul>	4.5 to 6.0		4	9	mA
	IDDHALT(2)		<ul style="list-style-type: none"> <li>•HALT mode</li> <li>•FmCF=3MHz</li> <li>•Ceramic resonator oscillation</li> <li>•FsXtal=32.768kHz</li> <li>•crystal oscillation</li> <li>•System clock : CF oscillation</li> <li>•Internal RC oscillation stops.</li> <li>•1 / 2 divider</li> </ul>	4.5 to 6.0		2.2	5	
	IDDHALT(3)		<ul style="list-style-type: none"> <li>•HALT mode</li> <li>•FmCF=0Hz</li> <li>•(when oscillation stops).</li> <li>•FsXtal=32.768kHz</li> <li>•crystal oscillation</li> <li>•System clock : RC oscillation</li> <li>•1 / 2 divider</li> </ul>	4.5 to 6.0		400	1600	μA
	IDDHALT(4)		<ul style="list-style-type: none"> <li>•HALT mode</li> <li>•FmCF=0Hz</li> <li>•(when oscillation stops).</li> <li>•FsXtal=32.768kHz</li> <li>•crystal oscillation</li> <li>•System clock : 32.768kHz</li> <li>•Internal RC oscillation stops.</li> <li>•1 / 2 divider</li> </ul>	4.5 to 6.0		25	100	
Current dissipation HOLD mode (Note 4)	IDDHOLD	VDD	HOLD mode	4.5 to 6.0		0.05	30	

(Note 4) The currents of output transistors and pull-up MOS transistors are ignored.

Table 1. Ceramic resonator oscillation guaranteed constant (main-clock)

A kind of oscillation	Producer	Oscillator	C1	C2
6MHz ceramic resonator oscillation	Murata	CSA 6.00MG	33pF	33pF
		CST 6.00MGW	on chip	
	Kyocera	KBR-6.0MSA	33pF	33pF
		PBRC 6.00A (chip type)	33pF	33pF
		KBR-6.0MKS	on chip	
		PBRC 6.00B (chip type)		
3MHz ceramic resonator oscillation	Murata	CSA 3.00MG	33pF	33pF
		CST 3.00MGW	on chip	
	Kyocera	KBR-3.0MS	47pF	47pF

\* Both C1 and C2 must use K rank ( $\pm 10\%$ ) and SL characteristics.

Table 2. Crystal oscillation guaranteed constant (sub-clock)

A kind of oscillation	Producer	Oscillator	C3	C4
32.768kHz crystal oscillation	Kyocera	KF-38G-13P0200	18pF	18pF

\* Both C3 and C4 must use J rank ( $\pm 5\%$ ) and CH characteristics.

(It is about the application which is not in need of high precision. Use K rank ( $\pm 10\%$ ) and SL characteristics.)

Notes

- Since the circuit pattern affects the oscillation frequency, place the oscillation-related parts as close to the oscillation pins as possible with the shortest possible pattern length.
- If you use other oscillators herein, we provide no guarantee for the characteristics.

### Notice for use

- The construction of the one-time programmable microcomputer with a blank built-in PROM makes it impossible for Sanyo to completely factory-test it before shipping. To probe reliability of the programmed devices, the screening procedure shown in the following figure should always be followed.
- It is not possible to perform a writing test on the blank PROM. 100% yield, therefore, cannot be guaranteed.
- Keeping the dry packing  
The environment must be held at a temperature of 30°C or less and a humidity level of 70% or less.
- After opening the packing  
After opening the packing, a controlled environment must be maintained until soldering.  
The environment must be held at a temperature of 30°C or less and a humidity level of 70% or less.  
Please solder within 96 hours.

#### a. Shipping with a blank PROM (Programming the data by yourself)

This microcomputer is provided DIP / QFP packages, but the condition before mounting is different. Refer to the mounting procedure as follows.

#### b. Shipping with a programmed PROM (Programming the data by Sanyo)

memo :

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products(including technical data,services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only ; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.

This catalog provides information as of January, 2001. Specifications and information herein are subject to change without notice.
