## SINGLE-ENDED, ANALOG-INPUT 24-BIT, 96-kHz STEREO A/D CONVERTER

---

### FEATURES

- 24-Bit Delta-Sigma Stereo A/D Converter
- Single-Ended Voltage Input: 3 V<sub>p-p</sub>
- Oversampling Decimation Filter:
  - Oversampling Frequency:  $\times 64$ ,  $\times 128$
  - Pass-Band Ripple:  $\pm 0.05$  dB
  - Stop-Band Attenuation:  $-65$  dB
  - On-Chip High-Pass Filter: 0.84 Hz (44.1 kHz)
- High-Performance:
  - THD+N:  $-95$  dB (Typically)
  - SNR: 103 dB (Typically)
  - Dynamic Range: 103 dB (Typically)
- PCM Audio Interface:
  - Master/Slave Mode Selectable
  - Data Formats:
    - 24-Bit Left-Justified
    - 24-Bit I<sup>2</sup>S
    - 20-, 24-Bit Right-Justified
- Sampling Rate: 16 kHz to 96 kHz
- System Clock: 256 f<sub>S</sub>, 384 f<sub>S</sub>, 512 f<sub>S</sub>, 768 f<sub>S</sub>
- Dual Power Supplies: 5 V for Analog, 3.3 V for Digital
- Package: 20-Pin SSOP

### APPLICATIONS

- AV Amplifier Receiver
- MD Player
- CD Recorder
- Multitrack Receiver
- Electric Musical Instrument

### DESCRIPTION

The PCM1803A is high-performance, low-cost, single-chip stereo analog-to-digital converter with single-ended analog voltage input. The PCM1803A uses a delta-sigma modulator with 64- and 128-times oversampling, and includes a digital decimation filter and high-pass filter, which removes the dc component of the input signal. For various applications, the PCM1803A supports master and slave modes and four data formats in serial interface. The PCM1803A is suitable for a wide variety of cost-sensitive consumer applications where good performance and operation from a 5-V analog supply and 3.3-V digital supply are required. The PCM1803A is fabricated using a highly advanced CMOS process and is available in a small 20-pin SSOP package.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

System Two, Audio Precision are trademarks of Audio Precision, Inc.  
All other trademarks are the property of their respective owners.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

**DEVICE INFORMATION**
**TERMINAL FUNCTIONS**

TERMINAL		I/O	DESCRIPTION
NAME	NO.		
AGND	6	–	Analog GND
BCK	11	I/O	Audio data bit clock input/output <sup>(1)</sup>
BYPAS	8	I	HPF bypass control. LOW: Normal mode (dc reject); HIGH: Bypass mode (through) <sup>(2)</sup>
DGND	13	–	Digital GND
DOUT	12	O	Audio data digital output
FMT0	17	I	Audio data format select input 0. See <i>Data Format</i> section. <sup>(2)</sup>
FMT1	18	I	Audio data format select input 1. See <i>Data Format</i> section. <sup>(2)</sup>
LRCK	10	I/O	Audio data latch enable input/output <sup>(1)</sup>
MODE0	19	I	Mode select input 0. See <i>Data Format</i> section. <sup>(2)</sup>
MODE1	20	I	Mode select input 1. See <i>Data Format</i> section. <sup>(2)</sup>
OSR	16	I	Oversampling ratio select input. LOW: $\times 64 f_S$ , HIGH: $\times 128 f_S$ <sup>(2)</sup>
PDWN	7	I	Power-down control, active-low <sup>(2)</sup>
SCKI	15	I	System clock input: 256 $f_S$ , 384 $f_S$ , 512 $f_S$ , or 768 $f_S$ <sup>(3)</sup>
TEST	9	I	Test, must be connected to DGND <sup>(2)</sup>
V <sub>CC</sub>	5	–	Analog power supply, 5-V
V <sub>DD</sub>	14	–	Digital power supply, 3.3-V
V <sub>INL</sub>	1	I	Analog input, L-channel
V <sub>INR</sub>	2	I	Analog input, R-channel
V <sub>REF1</sub>	3	–	Reference-voltage-1 decoupling capacitor
V <sub>REF2</sub>	4	–	Reference-voltage-2 decoupling capacitor

(1) Schmitt-trigger input

(2) Schmitt-trigger input with internal pulldown (50 k $\Omega$ , typically), 5-V tolerant

(3) Schmitt-trigger input, 5-V tolerant

**ABSOLUTE MAXIMUM RATINGS**

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

Supply voltage	V <sub>CC</sub>	–0.3 V to 6.5 V
Supply voltage	V <sub>DD</sub>	–0.3 V to 4 V
Ground voltage differences	AGND, DGND	$\pm 0.1$ V
Digital input voltage, V <sub>I</sub>	LRCK, BCK, DOUT	–0.3 V to (V <sub>DD</sub> + 0.3 V) < 4 V
Digital input voltage, V <sub>I</sub>	PDWN, BYPAS, TEST, SCKI, OSR, FMT0, FMT1, MODE0, MODE1	–0.3 V to 6.5 V
Analog input voltage, V <sub>I</sub>	V <sub>INL</sub> , V <sub>INR</sub> , V <sub>REF1</sub> , V <sub>REF2</sub>	–0.3 V to (V <sub>CC</sub> + 0.3 V) < 6.5 V
Input current, I <sub>I</sub>	Any pins except supplies	$\pm 10$ mA
Ambient temperature under bias, T <sub>bias</sub>		–40°C to 125°C
Storage temperature, T <sub>stg</sub>		–55°C to 150°C
Junction temperature, T <sub>J</sub>		150°C
Lead temperature (soldering)		260°C, 5 s
Package temperature (IR reflow, peak)		260°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## RECOMMENDED OPERATING CONDITIONS

over operating free-air temperature range

		MIN	NOM	MAX	UNIT
Analog supply voltage, $V_{CC}$		4.5	5	5.5	V

## DEVICE INFORMATION

### SYSTEM CLOCK

The PCM1803A supports  $256 f_s$ ,  $384 f_s$ ,  $512 f_s$ , and  $768 f_s$  as the system clock, where  $f_s$  is the audio sampling frequency. The system clock must be supplied on SCKI (pin 15).

The PCM1803A has a system clock-detection circuit that automatically senses if the system clock is operating at  $256 f_s$ ,  $384 f_s$ ,  $512 f_s$ , or  $768 f_s$  in slave mode. In master mode, the system clock frequency must be selected by MODE0 (pin 19) and MODE1 (pin 20), and  $768 f_s$  is not available. The system clock is divided automatically into 128  $f_s$  and 64  $f_s$ , and these frequencies are used to operate the digital filter and the delta-sigma modulator.

Table 1 shows the relationship of typical sampling frequency and system clock frequency, and Figure 17 shows system clock timing.

**Table 1. Sampling Frequency and System Clock Frequency**

SAMPLING FREQUENCY (kHz)	SYSTEM CLOCK FREQUENCY (MHz)			
	256 $f_s$	384 $f_s$	512 $f_s$	768 $f_s$ <sup>(1)</sup>
32	8.1920	12.2880	16.3840	24.5760
44.1	11.2896	16.9344	22.5792	33.8688
48	12.2880	18.4320	24.5760	36.8640
64	16.3840	24.5760	32.7680	49.1520
88.2	22.5792	33.8688	45.1584	–
96	24.5760	36.8640	49.1520	–

(1) Slave mode only

SYMBOL	PARAMETER	MIN	MAX	UNIT
$t_w(SCKH)$	System clock pulse duration, HIGH	8		ns
$t_w(SCKL)$	System clock pulse duration, LOW	8		ns

**Figure 17. System Clock Timing**

### POWER-ON-RESET SEQUENCE

The PCM1803A has an internal power-on-reset circuit, and initialization (reset) is performed automatically at the time when power-supply voltage ( $V_{DD}$ ) exceeds 2.2 V (typical). While  $V_{DD} < 2.2$  V (typical) and for 1024 system clock cycles after  $V_{DD} > 2.2$  V (typical), the PCM1803A stays in the reset state, and the digital output is forced to zero. The digital output becomes valid when a time period of  $4480/f_s$  has elapsed following release from the reset state. Figure 18 illustrates the internal power-on-reset timing and the digital output for power-on reset.

T0014-05

Figure 18. Internal Power-On-Reset Timing

### SERIAL AUDIO DATA INTERFACE

The PCM1803A interfaces the audio system through BCK (pin 11), LRCK (pin 10), and DOUT (pin 12).

### INTERFACE MODE

The PCM1803A supports master mode and slave mode as interface modes, and they are selected by MODE1 (pin 20) and MODE0 (pin 19) as shown in Table 2.

In master mode, the PCM1803A provides the timing of serial audio data communications between the PCM1803A and the digital audio processor or external circuit. While in slave mode, the PCM1803A receives the timing for data transfers from an external controller.

Table 2. Interface Mode

MODE1	MODE0	INTERFACE MODE
0	0	Slave mode (256 f <sub>S</sub> , 384 f <sub>S</sub> , 512 f <sub>S</sub> , 768 f <sub>S</sub> )
0	1	Master mode (512 f <sub>S</sub> )
1	0	Master mode (384 f <sub>S</sub> )
1	1	Master mode (256 f <sub>S</sub> )

#### Master Mode

In master mode, BCK and LRCK work as output pins, and these pins are controlled by timing, which is generated in the clock circuit of the PCM1803A. The frequency of BCK is fixed at LRCK × 64. The 768-f<sub>S</sub> system clock is not available in master mode.

#### Slave Mode

In slave mode, BCK and LRCK work as input pins. The PCM1803A accepts the 64-BCK/LRCK or 48-BCK/LRCK format (only for 384 f<sub>S</sub> and 768 f<sub>S</sub> system clocks), not the 32-BCK/LRCK format.

### DATA FORMAT

The PCM1803A supports four audio data formats in both master and slave modes, and the data formats are selected by FMT1 (pin 18) and FMT0 (pin 17) as shown in Table 3. Figure 19 illustrates the data formats in slave and master modes.

Table 3. Data Formats

FORMAT	FMT1	FMT0	DESCRIPTION
0	0	0	Left-justified, 24-bit

$t_r$	Rising time of all signals			20	ns
$t_f$	Falling time of all signals			20	ns

NOTE: Timing measurement reference level is 1.4 V for input and 0.5 V<sub>DD</sub> for output. Rising and falling time is measured from 10% to 90% of IN/OUT signal swing. Load capacitance of all signals is 20 pF.

**Figure 21. Audio Data Interface Timing (Master Mode: LRCK and BCK Work as Outputs)**

T0074-01

SYMBOL	PARAMETER	MIN	TYP	MAX	UNIT
$t_{(SCKBCK)}$	Delay time, SCKI rising edge to BCK edge	5		30	ns

NOTE: Timing measurement reference level is 1.4 V for input and 0.5 V<sub>DD</sub> for output. Load capacitance of BCK is 20 pF.

**Figure 22. Audio Clock Interface Timing (Master Mode: BCK Works as Output)**

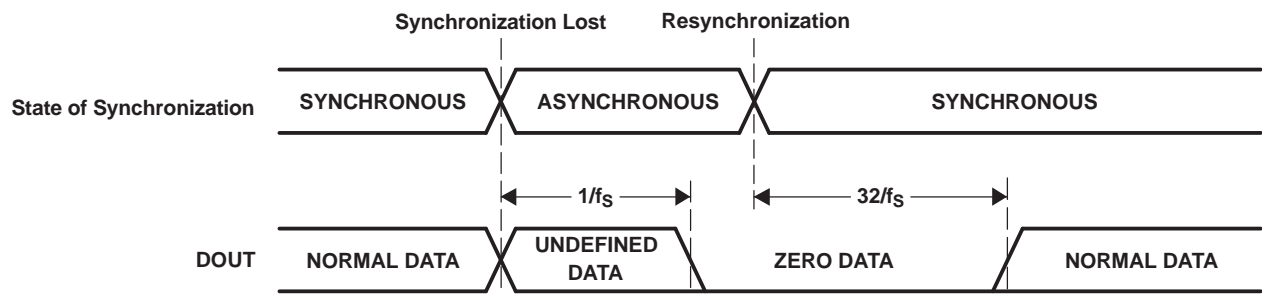

**SYNCHRONIZATION WITH DIGITAL AUDIO SYSTEM**

In slave mode, the PCM1803A operates under LRCK, synchronized with system clock SCKI. The PCM1803A does not need a specific phase relationship between LRCK and SCKI, but does require the synchronization of LRCK and SCKI.

If the relationship between LRCK and SCKI changes more than  $\pm 6$  BCKs for 64 BCK/frame ( $\pm 5$  BCKs for 48 BCK/frame) during one sample period due to LRCK or SCKI jitter, internal operation of the ADC halts within  $1/f_s$ , and digital output is forced to zero data (BPZ code) until resynchronization between LRCK and SCKI occurs.

In case of changes less than  $\pm 5$  BCKs for 64 BCK/frame ( $\pm 4$  BCKs for 48 BCK/frame), resynchronization does not occur and the previously explained digital output control and discontinuity do not occur.

Figure 23 illustrates the digital output response for loss of synchronization and resynchronization. During undefined data, the PCM1803A can generate some noise in the audio signal. Also, the transition of normal to undefined data and undefined or zero data to normal creates a discontinuity in the data of the digital output, which can generate some noise in the audio signal.

T0020-05

**Figure 23. ADC Digital Output for Loss of Synchronization and Resynchronization**

## POWER DOWN

$\overline{\text{PDWN}}$  (pin 7) controls operation of the entire ADC. During power-down mode, supply current for the analog portion is shut down and the digital portion is reset; also, DOUT (pin 12) is disabled. It is acceptable to halt the system clock during power-down mode so that power dissipation is minimized. The minimum LOW pulse duration on the PDWN pin is 100 ns.

It is recommended to set  $\overline{\text{PWDN}}$  (pin 7) to LOW once to obtain stable analog performance when the sampling rate, interface mode, data format, or oversampling control is changed.

**Table 4. Power-Down Control**

<b>PWDN</b>	<b>Power-Down Mode</b>
LOW	Power-down mode
HIGH	Normal operation mode

## HPF BYPASS

The built-in function for dc-component rejection can be bypassed by BYPAS (pin 8) control. In bypass mode, the dc component of the input analog signal, internal dc offset, etc., also are converted and included in the digital output data.

**Table 5. HPF Bypass Control**

<b>BYPAS</b>	<b>HPF (High-Pass Filter) Mode</b>
LOW	Normal (no dc component in DOUT) mode
HIGH	Bypass (dc component in DOUT) mode

## OVERSAMPLING RATIO CONTROL

OSR (pin 16) controls the oversampling ratio of the delta-sigma modulator,  $\times 64$  or  $\times 128$ . The  $\times 128$  mode is available for  $f_s \leq 48$  kHz.

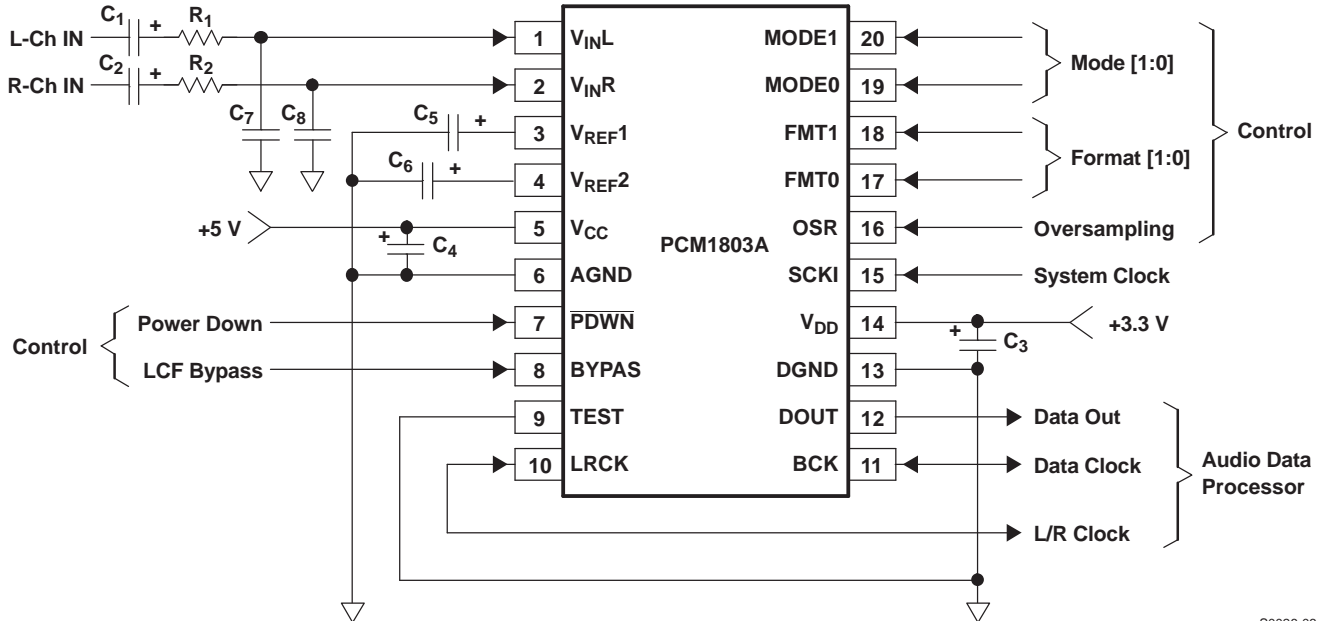

**Table 6. Oversampling Control**

<b>OSR</b>	<b>Oversampling Ratio</b>
LOW	$\times 64$
HIGH	$\times 128$ ( $f_s \leq 48$ kHz)

APPLICATION INFORMATION

TYPICAL CIRCUIT CONNECTION DIAGRAM

Figure 24 illustrates a typical circuit connection diagram where the cutoff frequency of the input HPF is about 160 kHz.

S0026-03

NOTES:

- A. C<sub>1</sub>, C<sub>2</sub>: A 1-μF electrolytic capacitor gives a 4-Hz ( $\tau = 1 \mu\text{F} \times 40 \text{ k}\Omega$ ) cutoff frequency for the input HPF in normal operation and requires a power-on settling time with a 40-ms time constant during the power-on initialization period.
- B. C<sub>3</sub>, C<sub>4</sub>: Bypass capacitors are 0.1-μF ceramic and 10-μF electrolytic, depending on layout and power supply.
- C. C<sub>5</sub>, C<sub>6</sub>: Recommended capacitors are 0.1-μF ceramic and 10-μF electrolytic.
- D. C<sub>7</sub>, C<sub>8</sub>, R<sub>1</sub>, R<sub>2</sub>: A 0.01-μF film-type capacitor and 100-Ω resistor give a 160-kHz ( $\tau = 0.01 \mu\text{F} \times 100 \Omega$ ) cutoff frequency for the anti-aliasing filter in normal operation.

Figure 24. Typical Application Diagram

---

**APPLICATION INFORMATION (continued)****BOARD DESIGN and LAYOUT CONSIDERATIONS** **$V_{CC}$ ,  $V_{DD}$  Pins**

The digital and analog power-supply lines to the PCM1803A should be bypassed to the corresponding ground pins with 0.1- $\mu$ F ceramic and 10- $\mu$ F electrolytic capacitors, as close to the pins as possible, to maximize the dynamic performance of the ADC.

**AGND, DGND Pins**

To maximize the dynamic performance of the PCM1803A, the analog and digital grounds are not connected internally. These grounds should have low impedance to avoid digital noise feeding back into the analog ground. Therefore, they should be connected directly to each other under the part to reduce potential noise problems.

 **$V_{INL}$ ,  $V_{INR}$  Pins**

The  $V_{INL}$  and  $V_{INR}$  pins need a simple external RC filter ( $f_C = 160$  kHz) as an antialiasing filter to remove out-of-band noise from the audio band. If the input signal includes noise with a frequency near the oversampling frequency ( $64 f_S$  or  $128 f_S$ ), the noise is folded into the baseband (audio band) signal through A-to-D conversion. The recommended R value is 100  $\Omega$ . Film-type capacitors of 0.01- $\mu$ F should be located as close as possible to the  $V_{INL}$  and  $V_{INR}$  pins and should be terminated to GND as close as possible to the AGND pin to maximize the dynamic performance of ADC, by suppressing kickback noise from the PCM1803A.

 **$V_{REF1}$  Pin**

A 0.1- $\mu$ F ceramic capacitor and 10- $\mu$ F electrolytic capacitor are recommended between  $V_{REF1}$  and AGND to ensure low source impedance of the ADC references. These capacitors should be located as close as possible to the  $V_{REF1}$  pin to reduce dynamic errors on the ADC reference.

 **$V_{REF2}$  Pin**

The differential voltage between  $V_{REF2}$  and AGND sets the analog input full-scale range. A 0.1- $\mu$ F ceramic capacitor and 10- $\mu$ F electrolytic capacitor are recommended between  $V_{REF2}$  and AGND. These capacitors should be located as close as possible to the  $V_{REF2}$  pin to reduce dynamic errors on the ADC reference.

**DOUT Pin**

The DOUT pin has enough load drive capability, but if the DOUT line is long, locating a buffer near the PCM1803A and minimizing load capacitance is recommended to minimize the digital-analog crosstalk and maximize the dynamic performance of the ADC.

**System Clock**

The quality of the system clock can influence the dynamic performance, because the PCM1803A operates based on a system clock. Therefore, it may be required to consider the system-clock duty, jitter, and the time difference between system-clock transition and BCK or LRCK transition in the slave mode.

**PACKAGING INFORMATION**

Orderable Device	Status <sup>(1)</sup>	Package Type	Package Drawing	Pins	Package Qty	Eco Plan <sup>(2)</sup>	Lead/Ball Finish	MSL Peak Temp <sup>(3)</sup>
PCM1803ADB	ACTIVE	SSOP	DB	20	65	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PCM1803ADBG4	ACTIVE	SSOP	DB	20	65	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PCM1803ADBR	ACTIVE	SSOP	DB	20	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PCM1803ADBRG4	ACTIVE	SSOP	DB	20	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
