查询THS7530PWPG4供应商

HIGH-SPEED, FULLY DIFFERENTIAL, CONTINUOUSLY VARIABLE GAIN AMPLIFIER

FEATURES

- Low Noise: V_n = 1.1 nV/ $\sqrt{Hz}$, Noise Figure = 9 dB
- Low Distortion:
  - HD_2 = –65 dBc, HD_3 = –61 dBc at 32 MHz
  - IMD_3 = –62 dBc, OIP_3 = 21 dBm at 70 MHz
- 300 MHz Bandwidth
- Continuously Variable Gain Range: 11.6 dB to 46.5 dB
- Gain Slope: 38.8 dB/V
- Fully Differential Input and Output
- Output Common-Mode Voltage Control
- Output Voltage Limiting

APPLICATIONS

- Time Gain Amplifiers in Ultra Sound, Sonar, and Radar
- Automatic Gain Control in Communication and Video
- System Gain Calibration in Communications
- Variable Gain in Instrumentation

DESCRIPTION

The THS7530 is fabricated using Texas Instruments' state-of-the-art BiCom III SiGe complementary bipolar process. The THS7530 is a dc-coupled wide bandwidth amplifier with voltage-controlled gain. The amplifier has high impedance differential inputs and low impedance differential outputs with high bandwidth gain control, output common mode control, and output voltage clamping.

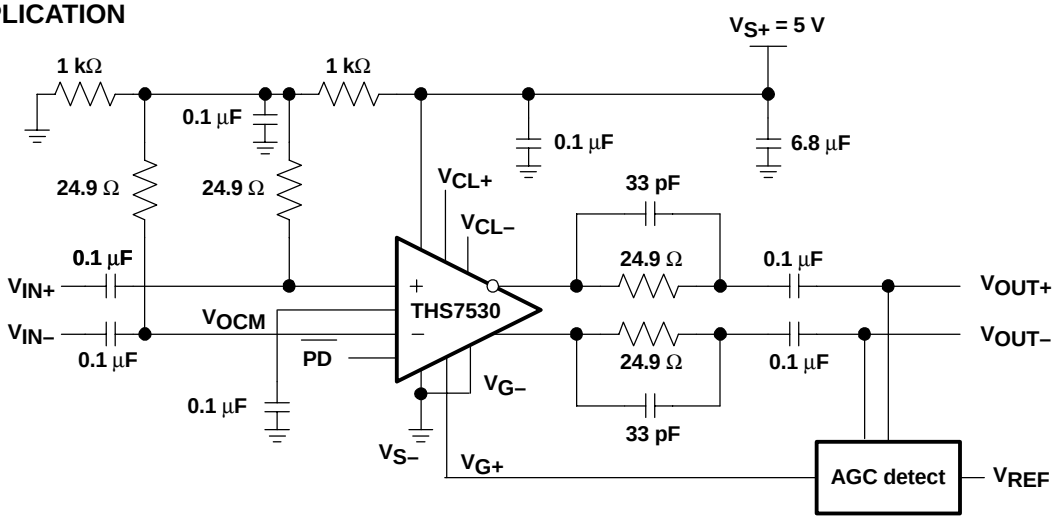
Signal channel performance is exceptional with 300-MHz bandwidth, and third harmonic distortion of –61 dBc at 32 MHz with 1 V_{PP} output into 400 Ω.

Gain control is linear in dB with 0 V to 0.9 V varying the gain from 11.6 dB to 46.5 dB with 38.8-dB/V gain slope.

Output voltage limiting is provided to limit the output voltage swing, and prevent saturating following stages.

The device is characterized for operation over the industrial temperature range: –40°C to 85°C.

AGC APPLICATION



Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

Copyright © 2002 – 2003, Texas Instruments Incorporated

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

PACKAGING/ORDERING INFORMATION

PRODUCT	PACKAGE	PACKAGE DESIGNATOR	SYMBOL	TEMPERATURE RANGE, T_A	ORDERING NUMBER	TRANSPORT MEDIA
THS7530	TSSOP PowerPAD	PWP-14	THS7530	–40°C to 85°C	THS7530PWP	Tube
					THS7530PWPR	Tape and reel

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range unless otherwise noted(1)

		THS7530
Supply voltage, $V_{S+} – V_{S–}$		5.5 V
Input voltage, V_I		$\pm V_S$
Output current, I_O (2)		65 mA
Differential input voltage, V_{ID}		±4 V
Continuous power dissipation		See Dissipation Rating Table
Maximum junction temperature, T_J		150°C
Maximum junction temperature for long term stability, T_J		125°C
Operating free-air temperature range, T_A		–40°C to 85°C
Storage temperature range, T_{stg}		–65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds		300°C
ESD	HBM	3000 V
	CDM	1500 V
	MM	200 V

(1) Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The THS7530 incorporates a PowerPAD™ on the underside of the chip. This acts as a heatsink and must be connected to a thermally dissipative plane for proper power dissipation. Failure to do so may result in exceeding the maximum junction temperature which could permanently damage the device. See TI technical brief SLMA002 and SLMA004 for more information about utilizing the PowerPAD thermally enhanced package.

RECOMMENDED OPERATING CONDITIONS

	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Supply voltage, [$V_{S–}$ to V_{S+}]		4.5	5	5.5	V
Operating free–air temperature, T_A		–40		85	°C
Input common mode voltage	[$V_{S–}$ to V_{S+}] = 5 V		2.5		V
Output common mode voltage	[$V_{S–}$ to V_{S+}] = 5 V		2.5		V

PACKAGE THERMAL DATA

APPLICATION INFORMATION

The THS7530 is designed for nominal 5-V power supply from V_{S+} to $V_{S–}$.

The amplifier has fully differential inputs, V_{IN+} and $V_{IN–}$, and fully differential outputs, V_{OUT+} and $V_{OUT–}$ The inputs are high impedance and outputs are low impedance. External resistors are recommended for impedance matching and termination purposes.

The inputs and outputs can be dc-coupled, but for best performance, the input and output common-mode voltage should be maintained at the midpoint between the two supply pins. The output common-mode voltage is controlled by the voltage applied to V_{OCM}. Left unterminated, V_{OCM} is set to midsupply by internal resistors. A 0.1-µF bypass capacitor should be placed between V_{OCM} and ground to reduce common-mode noise. The input common-mode voltage defaults to midrail when left unconnected. For voltages other than midrail, V_{OCM} must be biased by external means. V_{IN+} and $V_{IN–}$ both require a nominal 30-µA bias current for proper operation. Therefore, insure equal input impedance at each input to avoid generating an offset voltage that varies with gain.

Voltage applied from $V_{G–}$ to V_{G+} controls the gain of the part with 38.8-dB/V gain slope. The input can be differential or single ended. $V_{G–}$ must be maintained within –0.6 V and +0.8 V of $V_{S–}$ for proper operation. The negative gain input should typically be tied directly to the negative power supply.

V_{CL+} and $V_{CL–}$ are inputs that limit the output voltage swing of the amplifier. The voltages applied set an absolute limit on the voltages at the output. Input voltages at V_{CL+} and $V_{CL–}$ clamp the output insuring that neither output exceeds those values.

The power-down input is a TTL compatible input, referenced to the negative supply voltage. A logic low puts the THS7530 in power savings mode. In power-down mode the part consumes less than 1-mA current, the output goes high impedance, and a high amount of isolation is maintained between the input and output.

Power supply bypass capacitors are required for proper operation. A 6.8-µF tantalum bulk capacitor is recommended if the amplifier is located far from the power supply and may be shared among other devices. A ceramic 0.1-µF capacitor is recommended within 0.1” of the device power pin. The ceramic capacitors should be located on the same layer as the amplifier to eliminate the use of vias between the capacitors and the power pin.

The following circuits show some basic circuit configurations.

LAYOUT CONSIDERATIONS

The THS7530 comes in a thermally enhance PowerPAD™ package. Figure 25 shows the recommended number of vias and thermal land size recommended for best performance. Thermal vias connect the thermal land to internal or external copper planes and should have a drill diameter sufficiently small so that the via hole is effectively plugged when the barrel of the via is plated with copper. This plug is needed to prevent wicking the solder away from the interface between the package body and the thermal land on the surface of the board during solder reflow. The experiments conducted jointly with Solectron Texas indicate that a via drill diameter of 0.33mm (13 mils) or smaller works well when 1 ounce copper is plated at the surface of the board and simultaneously plating the barrel of the via. If the thermal vias are not plugged when the copper plating is performed, then a solder mask material should be used to cap the vias with a dimension equal to the via diameter + 0,1 mm minimum. This prevents the solder from being wicked through the thermal via and potentially creating a solder void in the region between the package bottom and the thermal land on the surface of the PCB.

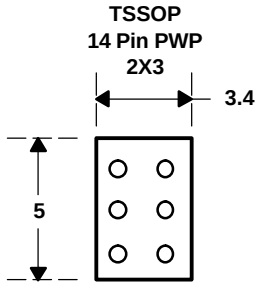

Figure 25. Recommended Thermal Land Size and Thermal Via Patterns (dimensions in mm)

See TI's Technical Brief titled PowerPAD™ Thermally Enhanced Package (SLMA002) for a detailed discussion of the PowerPAD™ package, its dimensions, and recommended use.

THEORY OF OPERATION

Figure 26 shows a simplified schematic of the THS7530.

The input architecture is a modified Gilbert Cell. The output from the Gilbert Cell is converted to a voltage and buffered to the output as a fully-differential signal. A summing node between the outputs is used to compare the output common-mode voltage to the V_{OCM} input. The V_{OCM} error amplifier then servos the output common-mode voltage to maintain it equal to the V_{OCM} input. Left unterminated, V_{OCM} is set to midsupply by internal resistors.

The gain control input is conditioned to give linear in dB gain control (block H). The gain control input is a differential signal from 0 V to 0.9 V which varies the gain from 11.6 dB to 46.5 dB.

V_{CL+} and V_{CL-} provide inputs that limit the output voltage swing of the amplifier.

THS7530PWPG4	ACTIVE	HTSSOP	PWP	14	90	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR
THS7530PWPR	ACTIVE	HTSSOP	PWP	14	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR
THS7530PWPRG4	ACTIVE	HTSSOP	PWP	14	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

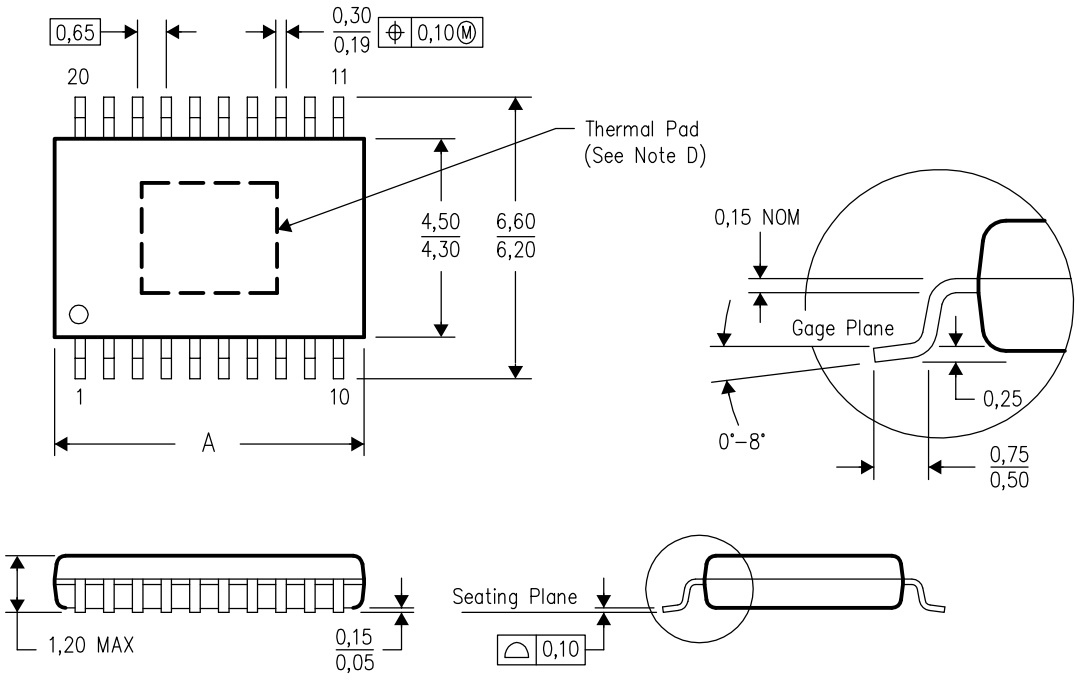
(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PWP (R–PDSO–G**) PowerPAD™ PLASTIC SMALL–OUTLINE PACKAGE

20 PIN SHOWN



DIM \ PINS **	14	16	20	24	28
A MAX	5,10	5,10	6,60	7,90	9,80
A MIN	4,90	4,90	6,40	7,70	9,60

4073225/G 08/03

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusions.
D. This package is designed to be soldered to a thermal pad on the board. Refer to Technical Brief, PowerPad Thermally Enhanced Package, Texas Instruments Literature No. SLMA002 for information regarding recommended board layout. This document is available at www.ti.com <http://www.ti.com>.
E. Falls within JEDEC MO–153

PowerPAD is a trademark of Texas Instruments.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
