

# Alternistor Triacs

## (6 – 40 Amps)

### General Description

Teccor offers bidirectional alternistors with current ratings from 6 to 40 amperes with voltages from 200 to 800 volts as part of Teccor's broad line of thyristors. Teccor's alternistor has been specifically designed for applications which are required to switch highly inductive loads. To accomplish this, a special chip has been designed which effectively offers the same performance as two thyristors (SCRs) wired inverse parallel (back-to-back); hence, the alternistor has better turn-off behavior than a standard triac. An alternistor may be triggered from a blocking to conduction state for either polarity of applied AC voltage with operating modes in Quadrants I, II, and III.

This new chip construction provides two electrically separate SCR structures, providing enhanced  $dv/dt$  characteristics while retaining the advantages of a single chip device.

All alternistors have glass-passivated junctions to ensure long term reliability and parameter stability. Teccor's glass offers a reliable barrier against junction contamination.

These alternistors are offered in four basic package configurations: TO-218X, TO-218AC, FastPak, and TO-220AB. Teccor's TO-218X package has been designed for heavy, steady power-

handling capability. The TO-218X features large eyelet terminals for ease of soldering heavy gauge hook-up wire. All the isolated packages have a standard isolation voltage rating of  $2500V_{RMS}$ .

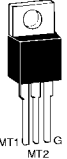

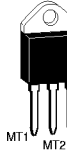

Variations of devices covered in this data sheet are available for custom design applications. Please consult factory for further information.

### Features

- High surge current capability
- Glass-passivated junctions
- 2500VAC isolation for "L," "J," "P," and "K"
- High commutating  $dv/dt$
- High static  $dv/dt$

# Electrical Specifications

## General Notes

- All measurements are made at 60Hz with a resistive load at an ambient temperature of +25°C unless specified otherwise.
- Operating temperature range ( $T_J$ ) is -40°C to +125°C except 0°C to +125°C for FastPaks.
- Storage temperature range ( $T_S$ ) is -40°C to +125°C except -20°C to +125°C for FastPaks.
- Lead solder temperature is a maximum of 230°C for 10 seconds maximum  $\geq 1/16"$  (1.59mm) from case.
- The case temperature ( $T_C$ ) is measured as shown on the dimensional outline drawings. See "Package Dimensions" section of this catalog.

## Electrical Specification Notes

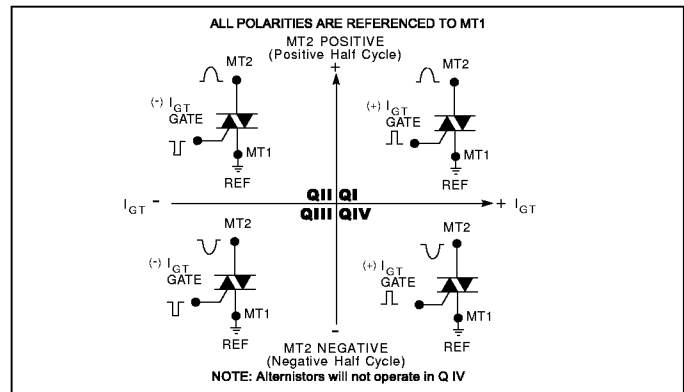

- For either polarity of MT2 with reference to MT1 terminal.
- For either polarity of gate voltage ( $V_{GT}$ ) with reference to MT1 terminal.
- See Definition of Quadrants.
- See Figures 4.1 through 4.4 for current rating at specific operating temperature.
- See Figures 4.5 and 4.6 for  $i_T$  and  $v_T$ .
- See Figure 4.7 for  $V_{GT}$  vs  $T_C$ .
- See Figure 4.8 for  $I_{GT}$  vs  $T_C$ .
- See Figure 4.9 for  $I_H$  vs  $T_C$ .
- See Figures 4.10 and 4.11 for surge rating with specific durations.
- See Figure 4.12 for  $t_{gt}$  vs  $I_{GT}$ .
- See package outlines for lead form configurations. When ordering special lead forming, add type number as suffix to part number.
- Initial on-state current = 400 mA(DC) for 15-40A devices and 100mA for 6-12 Amp devices.
- See Figures 4.1 through 4.4 for maximum allowable case temperature at maximum rated current.
- Pulse width  $\leq 10\mu s$ .
- For 6-12 Amp devices,  $R_L = 60\Omega$ ; 15 Amp and above,  $R_L = 30\Omega$
- 40 Amp pin terminal leads on K package can run 100°C to 125°C.
- Alternistor does not turn on in Quadrant IV.
- $T_c = T_J$  for test conditions in off-state
- $I_{GT} = 200$  mA for 6-12 Amp devices and 500 mA for 15-40 Amp devices with gate pulse having rise time of  $\leq 0.1$  microsecond.

## Gate Characteristics

Teccor triacs may be turned on in the following ways:

- With in-phase signals (using standard AC line) Quadrants I and III are used.
- By applying unipolar pulses (gate always negative)—with negative gate pulses Quadrants II and III are used.

In all cases, if maximum surge capability is required, gate pulses should be a minimum of one magnitude above minimum  $I_{GT}$  rating with a steep rising waveform ( $\leq 1\mu s$  rise time).

Definition of Quadrants

## Electrical Isolation

Teccor's isolated Alternistor packages will withstand a minimum high potential test of 2500 VAC (RMS) from leads to mounting tab, over the operating temperature range of the device. See isolation table below for standard and optional isolation ratings.

ELECTRICAL ISOLATION FROM LEADS TO MOUNTING TAB **				
VAC (RMS)	Isolated TO-218AC	Isolated FASTPAK	Isolated TO-220AB	Isolated TO-218X
2500	Standard	Standard	Standard	Standard
4000	N/A	N/A	Optional *	N/A

\* For 4000V isolation, use V suffix in part number.

\*\* UL Recognized File E71639
