

RP1286

**906.0 MHz
SAW
Resonator**

- **Ideal for 905.8 MHz Local Oscillators**
- **Nominal Insertion Phase Shift of 180° at Resonance**
- **Quartz Stability**
- **Rugged, Hermetic, Low-Profile TO39 Case**
- **Complies with Directive 2002/95/EC (RoHS)**

The RP1286 is a two-port, 180° surface-acoustic-wave (SAW) resonator in a low-profile TO39 case. It provides reliable, fundamental-mode, quartz frequency stabilization of fixed-frequency oscillators operating at or near 905.8 MHz. This resonator is designed specifically for use in the local oscillator of 916.5 MHz superheterodyne receivers operating in the USA under FCC Part 15.249 and in Canada under DoC RSS-210. It is also suitable for a variety of other oscillator applications.

Absolute Maximum Ratings

Rating	Value	Units
CW RF Power Dissipation (See: Typical Test Circuit)	+5	dBm
DC Voltage Between Any Two Pins (Observe ESD Precautions)	±30	VDC
Case Temperature	-40 to +85	°C

Electrical Characteristics

Characteristic	Sym	Notes	Minimum	Typical	Maximum	Units			
Center Frequency Absolute Frequency	f_C	2, 3, 4, 5,	905.900		906.100	MHz			
	Tolerance from 906.000 MHz						Δf_C	±100	kHz
Insertion Loss	IL	2, 5, 6		7.1	10.0	dB			
Quality Factor	Unloaded Q	5, 6, 7		6,600					
	50 Ω Loaded Q						Q_L	3,700	
Temperature Stability	Turnover Temperature	6, 7, 8	16	31	46	°C			
	Turnover Frequency						f_O	f_C+1	kHz
	Frequency Temp. Coefficient						FTC	0.037	ppm/°C ²
Frequency Aging	Absolute Value during First Year	6		≤ 10		ppm/yr			
DC Insulation Resistance between Any Two Pins		5	1.0			MΩ			
RF Equivalent RLC	Motional Resistance	5, 7, 9		126	216	Ω			
	Motional Inductance						L_M	147.985	μH
	Motional Capacitance						C_M	0.208528	fF
	Shunt Static Capacitance						C_O	1.6	1.9
Lid Symbolization (in addition to Lot and/or Date Codes)	RFM P1286								

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling.

Notes:

1. Frequency aging is the change in f_C with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing significantly in subsequent years.
2. The frequency f_C is the frequency of minimum IL with the resonator in the specified test fixture in a 50 Ω test system with VSWR ≤ 1.2:1. Typically, $f_{OSCILLATOR}$ or $f_{TRANSMITTER}$ is less than the resonator f_C .
3. One or more of the following United States patents apply: 4,454,488; 4,616,197.
4. Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
5. Unless noted otherwise, case temperature $T_C = +25°C ± 5°C$
6. The design, manufacturing process, and specifications of this device are subject to change without notice.
7. Derived mathematically from one or more of the following directly measured parameters: f_C , IL, 3 dB bandwidth, f_C versus T_C , and C_O .
8. Turnover temperature, T_O , is the temperature of maximum (or turnover) frequency, f_O . The nominal frequency at any case temperature, T_C , may be calculated from: $f = f_O [1 - FTC (T_O - T_C)^2]$. Typically, *oscillator* T_O is 20° less than the specified *resonator* T_O .
9. This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance C_O is the measured static (nonmotional) capacitance between either pin 1 and ground or pin 2 and ground. The measurement includes case parasitic capacitance.

Electrical Connections

This two-port, three-terminal SAW resonator is bidirectional. However, impedances and circuit board parasitics may not be symmetrical, requiring slightly different oscillator component-matching values.

Pin	Connection
1	Input or Output
2	Output or Input
3	Case Ground

Equivalent LC Model

The following equivalent LC model is valid near resonance:

Temperature Characteristics

The curve shown on the right accounts for resonator contribution only and does not include LC component temperature contributions.

Typical Test Circuit

$$\text{CW RF Power Dissipation} = P_{\text{INCIDENT}} - P_{\text{REFLECTED}}$$

Typical Frequency Response

The plot shown below is a typical frequency response for the RP series of two-port resonators. The plot is for RP1094.

Typical Application Circuits

This SAW resonator can be used in oscillator or transmitter designs that require 180° phase shift at resonance in a two-port configuration. One-port resonators can be simulated, as shown, by connecting pins 1 and 2 together. However, for most low-cost consumer products, this is only recommended for retrofit applications and not for new designs.
