

# High frequency operational amplifier

NE/SE5539

## DESCRIPTION

The NE/SE5539 is a very wide bandwidth, high slew rate, monolithic operational amplifier for use in video amplifiers, RF amplifiers, and extremely high slew rate amplifiers.

Emitter-follower inputs provide a true differential input impedance device. Proper external compensation will allow design operation over a wide range of closed-loop gains, both inverting and non-inverting, to meet specific design requirements.

## FEATURES

- Bandwidth
  - Unity gain - 350MHz
  - Full power - 48MHz
  - GBW - 1.2GHz at 17dB
- Slew rate: 600/V $\mu$ s
- AVOL: 52dB typical
- Low noise - 4nV $\sqrt{\text{Hz}}$  typical
- MIL-STD processing available

## APPLICATIONS

- High speed datacom
- Video monitors & TV

## ORDERING INFORMATION

DESCRIPTION	TEMPERATURE RANGE	ORDER CODE	DWG #
14-Pin Plastic Dual In-Line Package (DIP)	0 to +70°C	NE5539N	0405B
14-Pin Plastic Small Outline (SO) package	0 to +70°C	NE5539D	0175D
14-Pin Ceramic Dual In-Line Package	0 to +70°C	NE5539F	0581B
14-Pin Ceramic Dual In-Line Package	-55 to +125°C	SE5539F	0581B

## ABSOLUTE MAXIMUM RATINGS<sup>1</sup>

SYMBOL	PARAMETER	RATING	UNITS
V <sub>CC</sub>	Supply voltage	$\pm 12$	V
P <sub>DMAX</sub>	Maximum power dissipation, T <sub>A</sub> = 25°C (still-air) <sup>2</sup> F package N package D package	1.17 1.45 0.99	W W W
T <sub>A</sub>	Operating temperature range NE SE	0 to 70 -55 to +125	°C °C
T <sub>STG</sub>	Storage temperature range	-65 to +150	°C
T <sub>J</sub>	Max junction temperature	150	°C
T <sub>SOLD</sub>	Lead soldering temperature (10sec max)	+300	°C

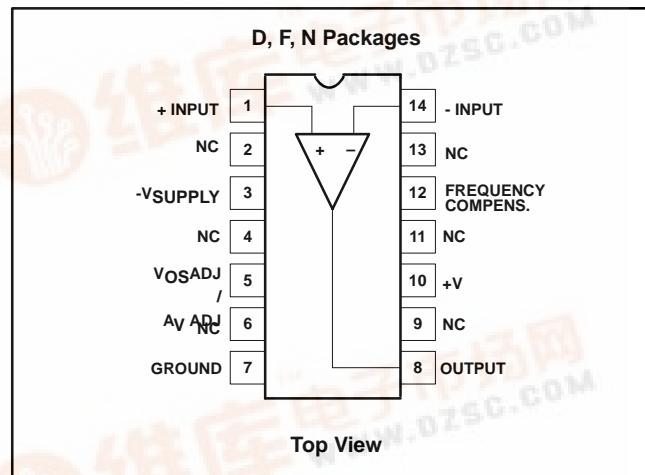

### NOTES:

1. Differential input voltage should not exceed 0.25V to prevent excessive input bias current and common-mode voltage 2.5V. These voltage limits may be exceeded if current is limited to less than 10mA.

2. Derate above 25°C, at the following rates:

- F package at 9.3mW/°C
- N package at 11.6mW/°C
- D package at 7.9mW/°C

## PIN CONFIGURATION

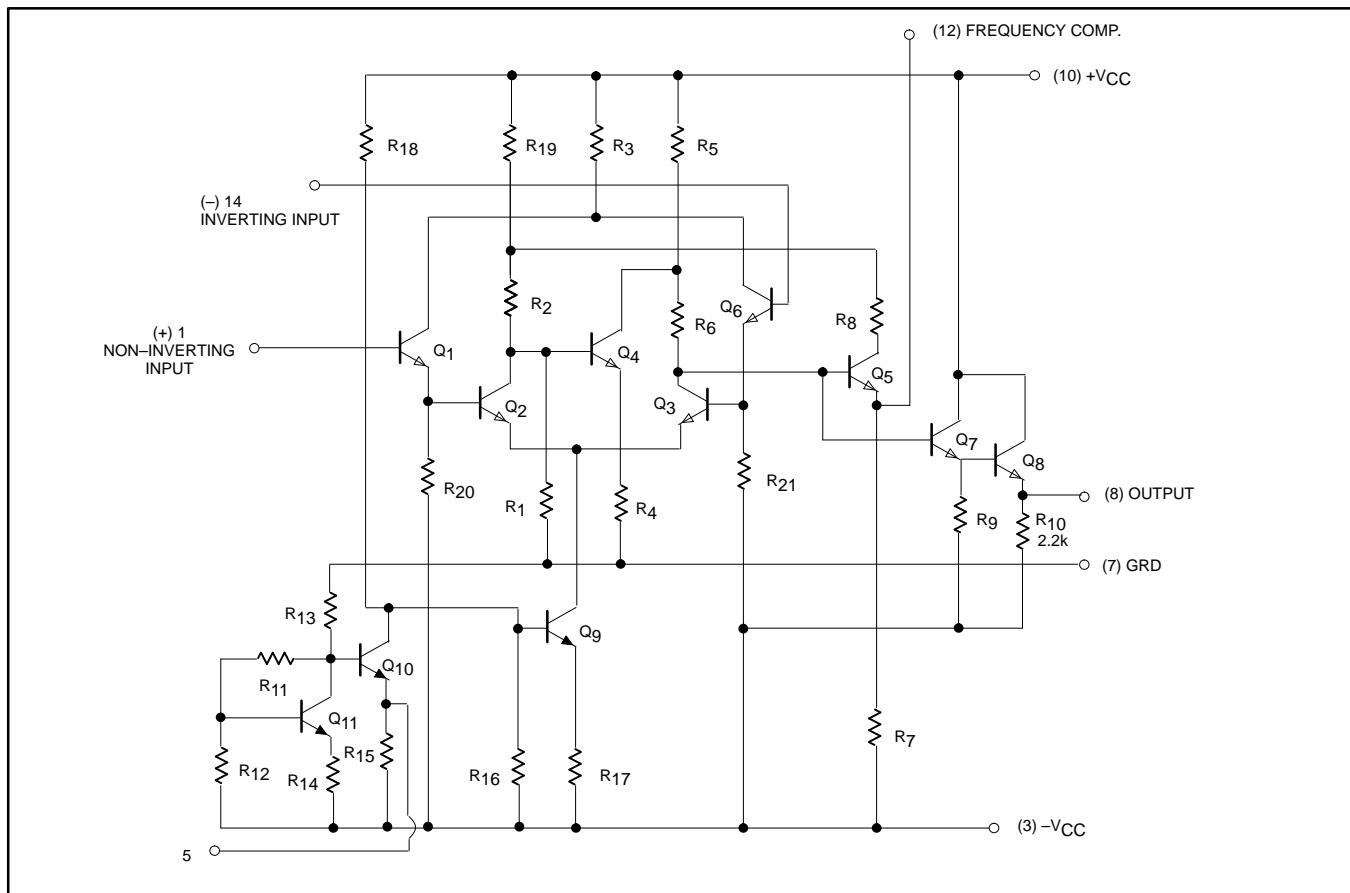

- Satellite communications
- Image processing
- RF instrumentation & oscillators
- Magnetic storage
- Military communications

**CIRCUIT LAYOUT CONSIDERATIONS**

As may be expected for an ultra-high frequency, wide-gain bandwidth amplifier, the physical circuit is extremely critical.

Bread-boarding is not recommended. A double-sided copper-clad printed circuit board will result in more favorable system operation. An example utilizing a 28dB non-inverting amp is shown in Figure 1.

$R_1 = 75\Omega$  5% CARBON  
 $R_2 = 75\Omega$  5% CARBON  
 $R_3 = 75\Omega$  5% CARBON  
 $R_4 = 36K$  5% CARBON

$R_5 = 20k$  TRIM POT (CERMET)  
 $R_F = 1.5k$  (28dB GAIN)  
 $R_6 = 470\Omega$  5% CARBON

**NE5539 COLOR VIDEO AMPLIFIER**

The NE5539 wideband operational amplifier is easily adapted for use as a color video amplifier. A typical circuit is shown in Figure 2 along with vector-scope1 photographs showing the amplifier differential gain and phase response to a standard five-step modulated staircase linearity signal (Figures 3, 4 and 5). As can be seen in Figure 4, the gain varies less than 0.5% from the bottom to

the top of the staircase. The maximum differential phase shown in Figure 5 is approximately  $+0.1^\circ$ .

The amplifier circuit was optimized for a  $75\Omega$  input and output termination impedance with a gain of approximately 10 (20dB).

**NOTE:**

1. The input signal was 200mV and the output 2V.  $V_{CC}$  was  $\pm 8V$ .
