

Product Description

Stanford Microdevices' SHF-0198 series is a high performance AlGaAs/GaAs Heterostructure FET housed in a low-cost stripline-mount ceramic package. HFET technology improves breakdown voltage while minimizing Schottky leakage current for higher power-added efficiency and improved linearity.

Output power at 1dB compression for the SHF-0198 is +27dBm when biased for Class A operation at 9V and 150mA. This HFET is also characterized at 5V for lower voltage applications.

This device can be used in both analog and digital wireless communication infrastructure and subscriber equipment including cellular, PCS, CDPD, wireless data and pagers.
