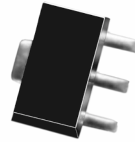
Preliminary

SHF-0289

DC-3 GHz, 1.0 Watt GaAs HFET

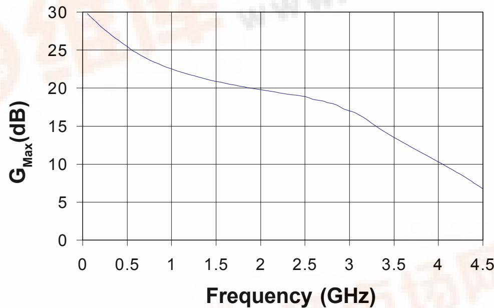


Product Description

Stanford Microdevices' SHF-0289 series is a high performance GaAs Heterostructure FET housed in a low-cost surface-mount plastic package. HFET technology improves breakdown voltage while minimizing Schottky leakage current for higher power added efficiency and improved linearity.

Output power at 1dB compression for the SHF-0289 is +30dBm when biased for Class AB operation at 8V and 250mA. The +46 dBm third order intercept makes it ideal for high dynamic range, high intercept point requirements. They are well suited for use in both analog and digital wireless communication infrastructure and subscriber equipment including cellular PCS, CDPD, wireless data, and pagers.

Adequate heat sinking must be provided for this part to avoid exceeding the maximum junction temperature. Methods include the use of screws near the device, and filled vias beneath the part to the ground plane. Refer to "Mounting and Thermal Considerations" section on page 7 for more information.



Product Features

- Patented GaAs Heterostructure FET Technology
- +30dBm Output Power at 1dB Compression
- +46dBm Output IP3
- High Drain Efficiency: Up to 40% at Class AB
- 13 dB Gain at 900MHz (Application circuit)
- 13 dB Gain at 1900MHz (Application circuit)

Applications

- Analog and Digital Wireless System
- Cellular PCS, CDPD, Wireless Data, Pagers

Electrical Specifications at Ta = 25° C

Symbol	Parameters: Test Conditions		Units	Min.	Typ.	Max.
$\|S_{21}\|^2$	Insertion Power Gain Vds = 8.0V, I dq= 250mA, Z_S=Z_L=50 Ohms	f = 0.9 GHz f = 1.9 GHz	dB		17.7 12.5	
G_{max}	Maximum Available Gain Vds = 8.0V, I dq= 250mA, Z_S=$Z_{S\ OPT}$, Z_L=$Z_{L\ OPT}$	f = 0.9 GHz f = 1.9 GHz	dB		23 20	
TOIP	Output Third Order Intercept Point (Device is tuned for maximum power output)	f = 0.9 GHz f = 1.9 GHz	dBm dBm		46 46

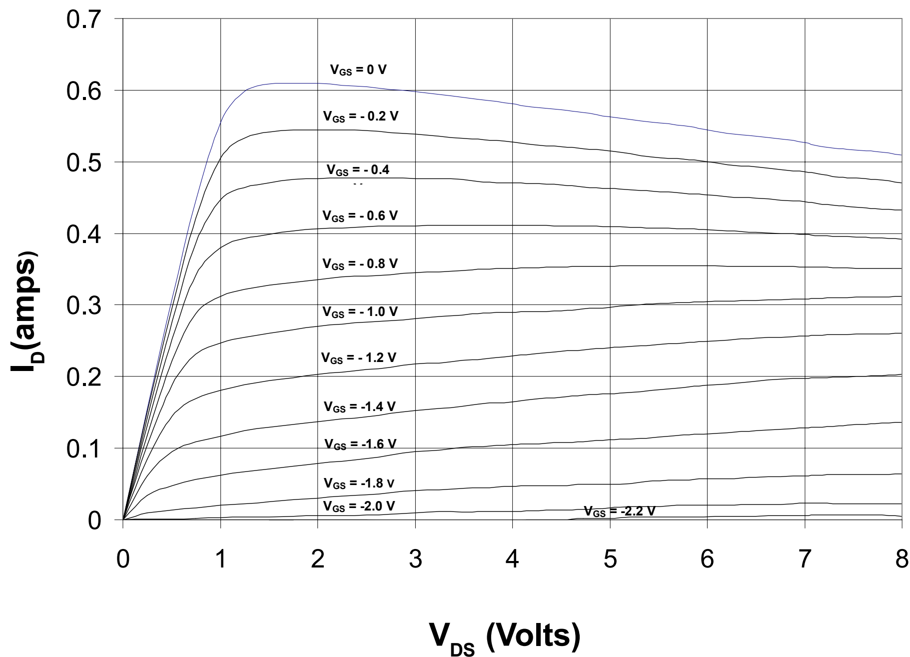
Absolute Maximum Ratings

Notes:

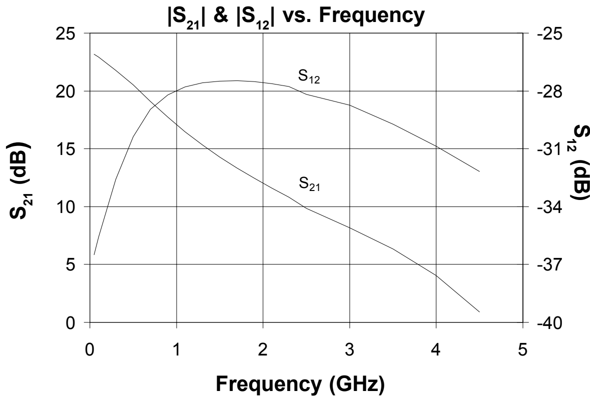
1. Operation of this device above any one of these parameters may cause permanent damage.

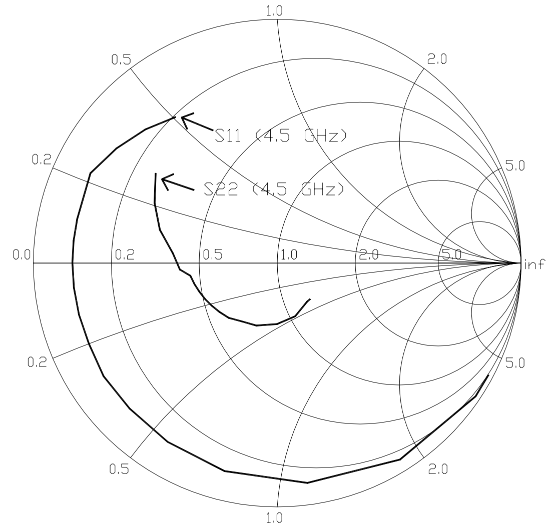
Parameter	Symbol	Absolute Maximum
Drain-to-Source Voltage	V_{DS}	+12V
Gate-to-Source Voltage	V_{GS}	-5V to 0V
Operating Temperature	T_{OP}	-45 C to +85° C
RF Input Power	P_{IN}	200 mW
Channel Temperature	T_{CH}	+175° C
Storage Temperature	T_{STG}	-65 to +175° C

Plot of I_D vs. V_{DS} for V_{GS}= -2.2V to 0V



NOTE: I/V curves were taken using pulse sampling techniques. This results in low duty cycle currents through the device and therefore very low power levels. It is not recommended that these measurements be taken in d.c. mode, as excessive current could result in damage to the device.





S_{11} & S_{22} vs. Frequency (.05 to 4.5 GHz)

Typical s-parameters at 25° C (V_{ds} = 8V, I_{dq} = 250mA)

Freq GHz	$\|S_{11}\|$	S_{11} Ang	S_{21} dB	$\|S_{21}\|$	S_{21} Ang	S_{12} dB	$\|S_{12}\|$	S_{12} Ang	$\|S_{22}\|$	S_{22} Ang

Preliminary

SHF-0289 DC-3GHz, 1 Watt GaAs HFET

Caution: ESD sensitive
Appropriate precautions in handling, packaging and testing devices must be observed.

Part Number Ordering Information

Part Number	Devices Per Reel	Reel Size
SHF-0289	1000	7"

Mounting and Thermal Considerations:

It is very important that adequate heat sinking be provided to avoid exceeding the maximum device junction temperature. All of the following suggestions should be followed to ensure maximum operating life of the device:

1. Use 2 ounce copper if possible.
2. Use a large ground pad area with many plated through-holes (solder filling is recommended).
3. Multiple filled vias are required directly below the SOT-89 ground tab.
4. Solder the copper pad on the backside of the device package to the ground plane.
5. Use three point board seating with 2-56 machine screws (no more than 0.2 inch from the device) to provide a low thermal resistance path to the plate. The thermal resistance from ground lead to screws is 2 deg. C/W
6. We recommend thermal transfer paste be used between the board and the mounting plate.

Part Symbolization

The part will be symbolized with a “H2” designator on the top surface of the package.
