

SI-3000C Series**5-Terminal, Multi-Function, Full-Mold, Low Dropout Voltage Dropper Type****■Features**

- Compact full-mold package (equivalent to TO220)
- Output current: 1.5A
- Low dropout voltage: $V_{DIF} \leq 1V$ (at $I_o = 1.5A$)
- Variable output voltage (rise only)
May be used for remote sensing
- Output ON/OFF control terminal is compatible with LS-TTL.
(It may be directly driven by LS-TTL or standard CMOS logic.)
- Built-in foldback overcurrent (SI-3033C: Drooping type overcurrent),
overvoltage, thermal protection circuits

**■Applications**

- For stabilization of the secondary stage of switching power supplies
- Electronic equipment

■Absolute Maximum Ratings

(Ta=25°C)

| Parameter | Symbol | Ratings | | | | Unit |
|--|----------------------|---|----------------|----------------|----------|------|
| | | SI-3033C | SI-3050C/3090C | SI-3120C/3150C | SI-3240C | |
| DC Input Voltage | V _{IN} | 20 | 35 | 35 | 45 | V |
| Voltage of Output Control Terminal | V _c | V _{IN} | | | | V |
| DC Output Current | I _o | 1.5 ⁺² | | | | A |
| Power Dissipation | P _{D1} | 18(With infinite heatsink) | | | | W |
| | P _{D2} | 1.5(Without heatsink, stand-alone operation) | | | | W |
| Junction Temperature | T _j | −40 to +125 | | | | °C |
| Ambient Operating Temperature | T _{op} | −30 to +100 | | | | °C |
| Storage Temperature | T _{stg} | −40 to +125 | | | | °C |
| Thermal Resistance (junction to case) | R _{th(j-c)} | 5.5 | | | | °C/W |
| Thermal Resistance (junction to ambient air) | R _{th(j-a)} | 66.7(Without heatsink, stand-alone operation) | | | | °C/W |

*1: "A" may be indicated to the right of the Sanken logo.

*2: V_{IN(max)} and I_{O(max)} are restricted by the relation P_{D(max)}=(V_{IN}-V_O)•I_O=18(W).

*3: Refer to the dropout voltage.(Refer to Setting DC Input Voltage on page 7.)

*4: I_{S1} is specified at -5(%) drop point of output voltage V_O on the condition that V_{IN}=V_O+3V, I_O=1A.

*5: Output is ON even when output control terminal V_c is open. Each input level is equivalent to LS-TTL. Therefore, it may be directly driven by an LS-TTL circuit.

*6: A foldback type overcurrent protection circuit is built into the I_c regulator (excluding SI-3033C). Therefore, avoid using it for the following applications as it may cause starting errors:

- (1) Constant current load
- (2) Plus/minus power
- (3) Series power
- (4) V_O adjustment by raising ground voltage

●SI-3000C Series

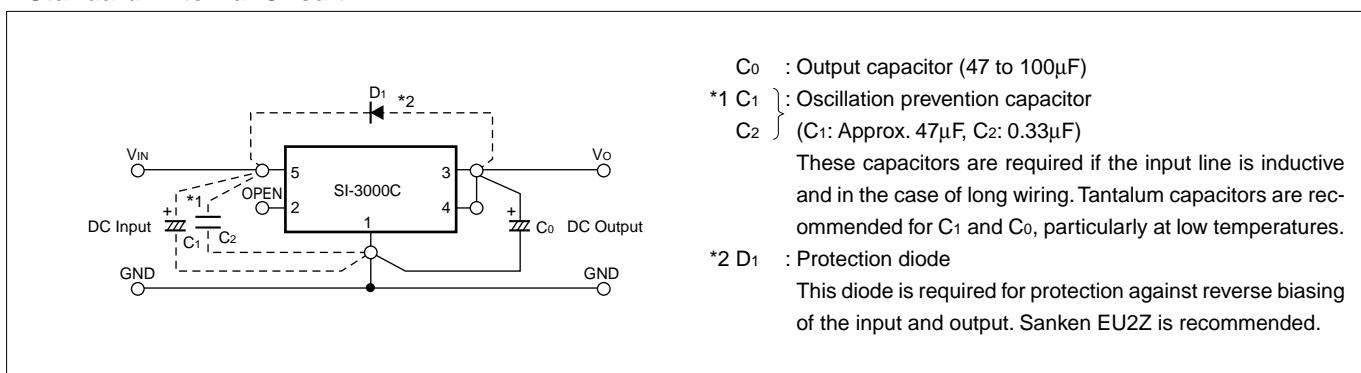

■External Dimensions

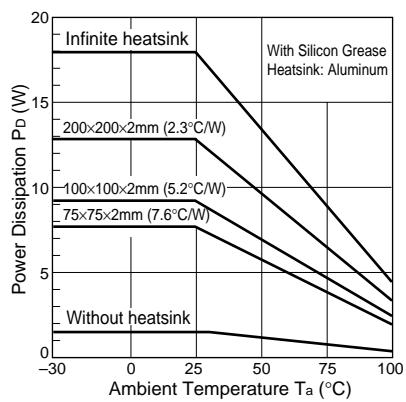

■Block Diagram

■Standard External Circuit

■Ta-PD Characteristics

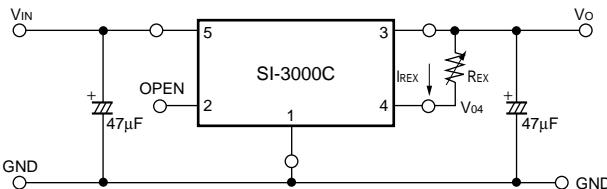

$$P_D = I_o \cdot [V_{IN}(\text{mean}) - V_o]$$

●SI-3000C Series

External Variable Output Voltage Circuit

1. Variable output voltage with a single external resistor

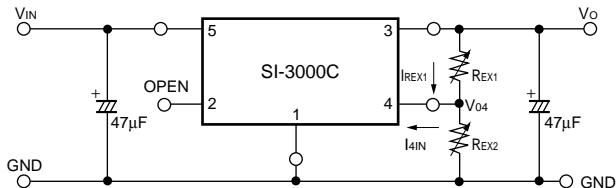

The output voltage may be increased by inserting resistor R_{EX} between terminals No.4 (sensing terminal) and No.3 (output terminal). The current I_{REX} flowing into terminal No.4 is 1mA (typ.) (SI-3033C: 0.43mA (typ.)), therefore the adjusted output voltage V_{OUT} is:

$$V_{OUT} = V_{O4} + I_{REX} \cdot R_{EX} \quad *V_{O4}: \text{output voltage of SI-3000C series}$$

However, the internal resistor (between terminals No. 4 and No.1) is a semiconductor resistor, which has approximately thermal characteristics of $+0.2\%/\text{°C}$.

It is important to keep the thermal characteristics in mind when adjusting the output voltage.

2. Variable output voltage with two external resistors

The output voltage may be increased by inserting resistors R_{EX1} between terminals No.4 (sensing terminal) and No.3 (output terminal) and R_{EX2} between terminals No.4 and No.1 (ground terminal).

The current I_{4IN} flowing into terminal No.4 is 1mA (typ.) (SI-3033C: 0.43mA (typ.)) so the thermal characteristics may be improved compared to the method shown in 1 by setting the external current I_{REX1} at approximately 5 times the value of I_{4IN} (stability coefficient $S=5$).

The adjusted output voltage V_{OUT} in this case is:

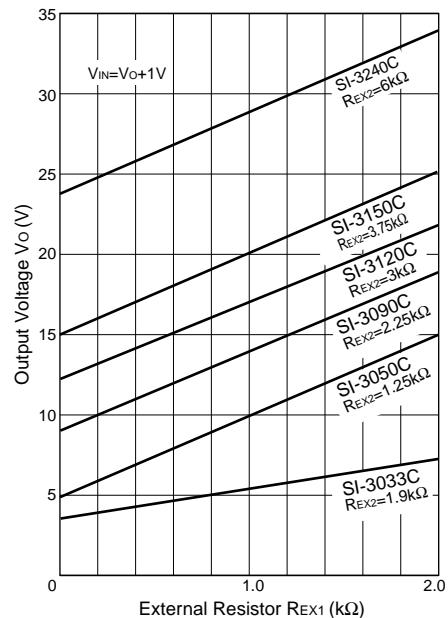

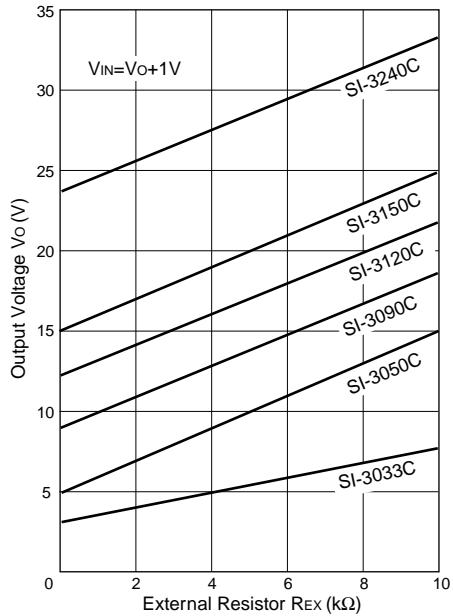

$$\left\{ \begin{array}{l} V_{OUT} = V_{O4} + R_{EX1} \cdot I_{REX1} \\ I_{REX1} = S \cdot I_{4IN} \end{array} \right.$$

The value of the external resistors may be obtained as follows:

$$R_{EX1} = \frac{V_{O4} - V_O}{S \cdot I_{4IN}}, \quad R_{EX2} = \frac{V_O}{(S-1) \cdot I_{4IN}}$$

* V_{O4} : Output voltage of SI-3000C series

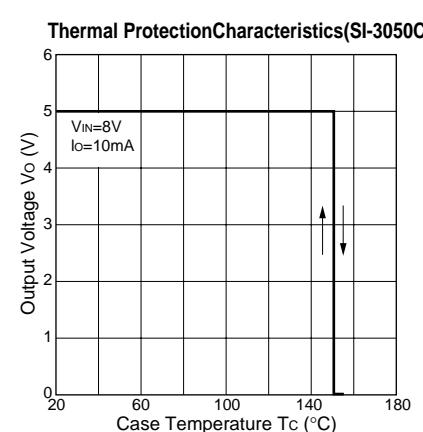

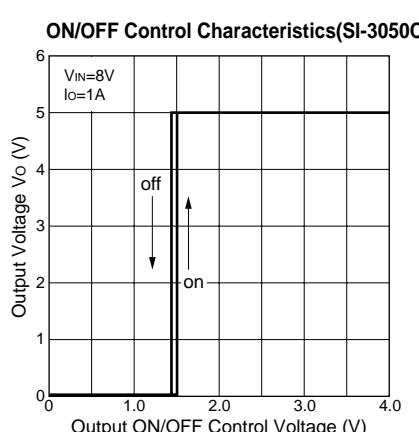

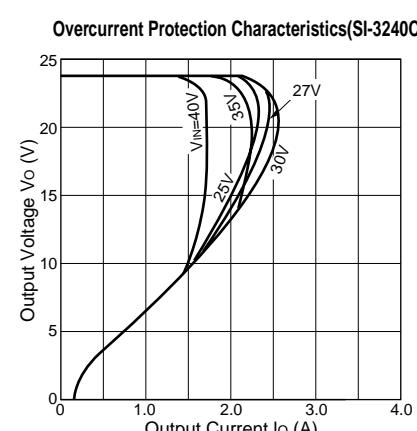

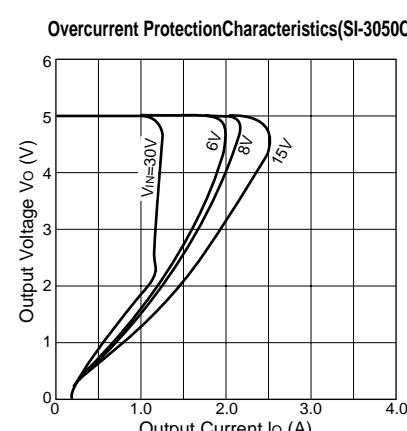

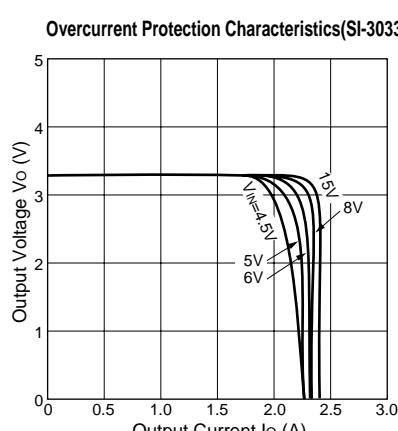

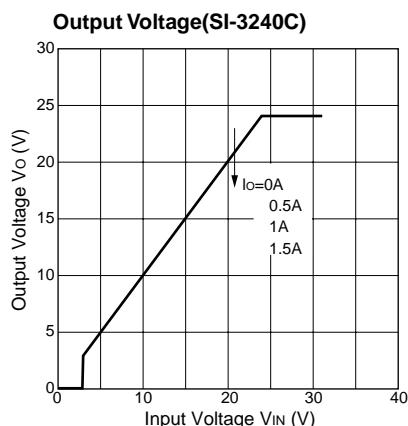

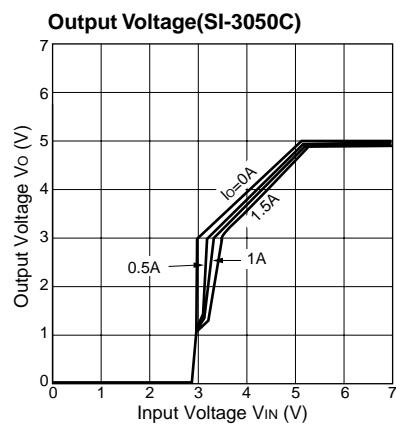

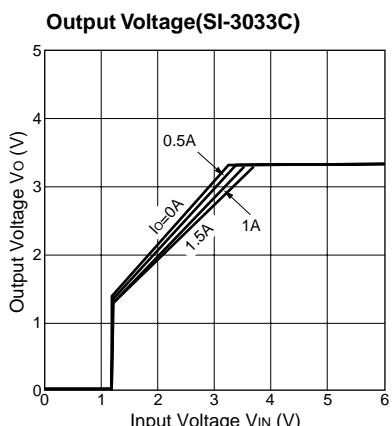

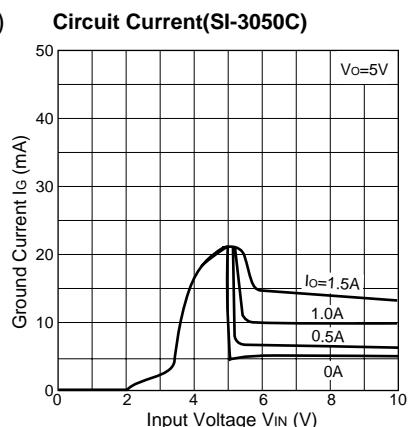

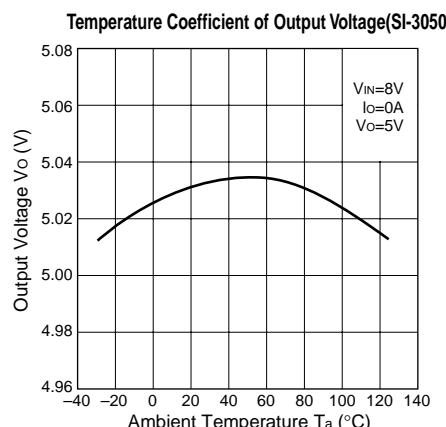

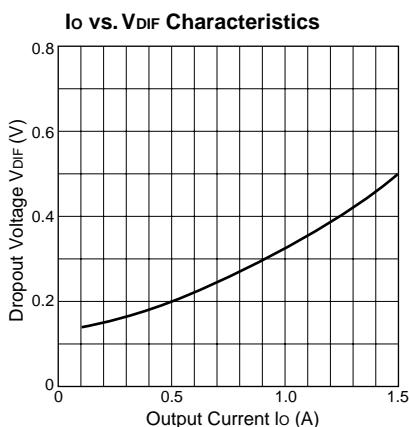

S : Stability coefficient of I_{4IN} (may be set to any value)

Note: In the SI-3000C series, the output voltage increase can be adjusted as mentioned above. However, when the rise is set to approximately 10V compared to output voltage V_{O4} , the necessary output current may not be obtained due to the S.O.A. protection circuit in the SI-3000C series.

■Typical Characteristics

($T_a=25^\circ\text{C}$)

Note on Thermal Protection:

The thermal protection circuit is intended for protection against heat during instantaneous short-circuiting. Its operation is not guaranteed for continuous heating condition such as short-circuiting over extended periods of time.
