

## 3.3V FULL-DUPLEX RS-485 DRIVERS AND RECEIVERS

### FEATURES

- 1/8 Unit-Load Option Available (Up to 256 Nodes on the Bus)
- Bus-Pin ESD Protection Exceeds 15 kV HBM
- Optional Driver Output Transition Times for Signaling Rates <sup>(1)</sup> of 1 Mbps, 5 Mbps and 25 Mbps
- Low-Current Standby Mode: < 1  $\mu$ A
- Glitch-Free Power-Up and Power-Down Protection for Hot-Plugging Applications
- 5V Tolerant Inputs
- Bus Idle, Open, and Short Circuit Failsafe
- Meets or exceeds the requirements of ANSI TIA/EIA-485-A and RS-422 Compatible
- 5-V Devices available, SN65HVD50-59

### APPLICATIONS

- Utility Meters
- DTE/DCE Interfaces
- Industrial, Process, and Building Automation
- Point-of-Sale (POS) Terminals and Networks

### DESCRIPTION

The SN65HVD3X devices are 3-state differential line drivers and differential-input line receivers that operate with 3.3-V power supply.

- (1) The signaling rate of a line is the number of voltage transitions that are made per second expressed in the units bps (bits per second).

Each driver and receiver has separate input and output pins for full-duplex bus communication designs. They are designed for balanced transmission lines and interoperability with ANSI TIA/EIA-485A, TIA/EIA-422-B, ITU-T v.11 and ISO 8482:1993 standard-compliant devices.

The SN65HVD30, SN65HVD31, SN65HVD32, SN65HVD36 and SN65HVD37 are fully enabled with no external enabling pins. The SN65HVD36 and SN65HVD37 implement receiver equalization technology for improved performance in long distance applications.

The SN65HVD33, SN65HVD34, SN65HVD35, SN65HVD38, and SN65HVD39 have active-high driver enables and active-low receiver enables. A very low, less than 1  $\mu$ A, standby current can be achieved by disabling both the driver and receiver. The SN65HVD38 and SN65HVD39 implement receiver equalization technology for improved performance in long distance applications.

All devices are characterized for operation from -40°C to +85°C.

The SN65HVD36 and SN65HVD38 implement receiver equalization technology for improved jitter performance on differential bus applications with data rates up to 20 Mbps at cable lengths up to 160 meters.

The SN65HVD37 and SN65HVD39 implement receiver equalization technology for improved jitter performance on differential bus applications with data rates in the range of 1 to 5 Mbps at cable lengths up to 1000 meters.

### IMPROVED REPLACEMENT FOR:

Part Number	Replace with
xxx3491	SN65HVD33: Better ESD protection (15kV vs 2kV or not specified) Higher Signaling Rate (25Mbps vs 20Mbps) Fractional Unit Load (64 Nodes vs 32)
MAX3491E	SN65HVD33: Higher Signaling Rate (25Mbps vs 12Mbps) Fractional Unit Load (64 Nodes vs 32)
MAX3076E	SN65HVD33: Higher Signaling Rate (25Mbps vs 16Mbps) Lower Standby Current (1 $\mu$ A vs 10 $\mu$ A)
MAX3073E	SN65HVD34: Higher Signaling Rate (5Mbps vs 500kbps) Lower Standby Current (1 $\mu$ A vs 10 $\mu$ A)
MAX3070E	SN65HVD35: Higher Signaling Rate (1Mbps vs 250kbps) Lower Standby Current (1 $\mu$ A vs 10 $\mu$ A)

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range unless otherwise noted<sup>(1)(2)</sup>

		UNIT
V <sub>CC</sub>	Supply voltage range, V <sub>CC</sub>	–0.3 V to 6 V
	Voltage range at any bus terminal (A, B, Y, Z)	–9 V to 14 V
	Voltage input, transient pulse through 100 Ω. See Figure 12 (A, B, Y, Z) <sup>(3)</sup>	–50 to 50 V
V <sub>I</sub>	Input voltage range (D, DE, $\overline{RE}$ )	–0.5 V to 7 V
	Continuous total power dissipation	Internally limited
I <sub>O</sub>	Output current (receiver output only, R)	11 mA

- Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.
- This tests survivability only and the output state of the receiver is not specified.

## RECOMMENDED OPERATING CONDITIONS

over operating free-air temperature range unless otherwise noted

PARAMETER		MIN	NOM	MAX	UNIT
V <sub>CC</sub>	Supply voltage	3.0		3.6	
V <sub>I</sub> or V <sub>IC</sub>	Voltage at any bus terminal (separately or common mode)	–7 <sup>(1)</sup>		12	V
1/t <sub>UI</sub>	Signaling rate	SN65HVD30, SN65HVD33, SN65HVD36, SN65HVD38		25	Mbps
		SN65HVD31, SN65HVD34, SN65HVD37, SN65HVD39		5	
		SN65HVD32, SN65HVD35		1	
R <sub>L</sub>	Differential load resistance	54	60		Ω
V <sub>IH</sub>	High-level input voltage			V <sub>CC</sub>	
V <sub>IL</sub>	Low-level input voltage			0.8	V
V <sub>ID</sub>	Differential input voltage	–12		12	
I <sub>OH</sub>	High-level output current	Driver	–60		mA
		Receiver	–8		
I <sub>OL</sub>	Low-level output current	Driver		60	mA
		Receiver		8	
T <sub>A</sub>	Ambient still-air temperature	–40		85	°C

- The algebraic convention, in which the least positive (most negative) limit is designated as minimum is used in this data sheet.

## ELECTROSTATIC DISCHARGE PROTECTION

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT
Human body model	Bus terminals and GND		±16		kV
Human body model <sup>(2)</sup>	All pins		±4		
Charged-device-model <sup>(3)</sup>	All pins		±1		

- All typical values at 25°C with 3.3-V supply.
- Tested in accordance with JEDEC Standard 22, Test Method A114-A.
- Tested in accordance with JEDEC Standard 22, Test Method C101.

## DRIVER ELECTRICAL CHARACTERISTICS

over recommended operating conditions unless otherwise noted

PARAMETER		TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT
$V_{I(K)}$	Input clamp voltage	$I_I = -18 \text{ mA}$	-1.5			V

## DEVICE INFORMATION

### LOW-POWER SHUTDOWN MODE

When both the driver and receiver are disabled ( $\overline{RE}$  high and  $\overline{DE}$  low) the device is in shutdown mode. If the enable inputs are in this state for less than 60 ns, the device does not enter shutdown mode. This guards against inadvertently entering shutdown mode during driver/receiver enabling. Only when the enable inputs are held in this state for 300 ns or more, the device is assured to be in shutdown mode. In this low-power shutdown mode, most internal circuitry is powered down, and the supply current is typically less than 1 nA. When either the driver or the receiver is re-enabled, the internal circuitry becomes active.

**Figure 13. Low-Power Shutdown Logic Diagram**

If only the driver is re-enabled ( $\overline{DE}$  transitions to high) the driver outputs are driven according to the D input after the enable times given by  $t_{PZH2}$  and  $t_{PZL2}$  in the driver switching characteristics. If the D input is open when the driver is enabled, the driver outputs default to A high and B low, in accordance with the driver failsafe feature.

If only the receiver is re-enabled ( $\overline{RE}$  transitions to low) the receiver output is driven according to the state of the bus inputs (A and B) after the enable times given by  $t_{PZH2}$  and  $t_{PZL2}$  in the receiver switching characteristics. If there is no valid state on the bus the receiver responds as described in the failsafe operation section.

If both the receiver and driver are re-enabled simultaneously, the receiver output is driven according to the state of the bus inputs (A and B) and the driver output is driven according to the D input. Note that the state of the active driver affects the inputs to the receiver. Therefore, the receiver outputs are valid as soon as the driver outputs are valid.

**DEVICE INFORMATION (continued)  
FUNCTION TABLES**

**SN65HVD33, SN65HVD34, SN65HVD35, SN65HVD38,  
SN65HVD39 DRIVER**

INPUTS		OUTPUTS	
D	DE	Y	Z
H	H	H	L
L	H	L	H
X	L or open	Z	Z
Open	H	L	H

**SN65HVD33, SN65HVD34, SN65HVD35, SN65HVD38,  
SN65HVD39 RECEIVER**

DIFFERENTIAL INPUTS $V_{ID} = V_A - V_B$	ENABLE RE	OUTPUT R
$V_{ID} \leq -0.2 \text{ V}$	L	L
$-0.2 \text{ V} < V_{ID} < -0.02 \text{ V}$	L	?
$-0.02 \text{ V} \leq V_{ID}$	L	H
X	H or open	Z
Open Circuit	L	H
Idle circuit	L	H
Short Circuit, $V_A = V_B$	L	H

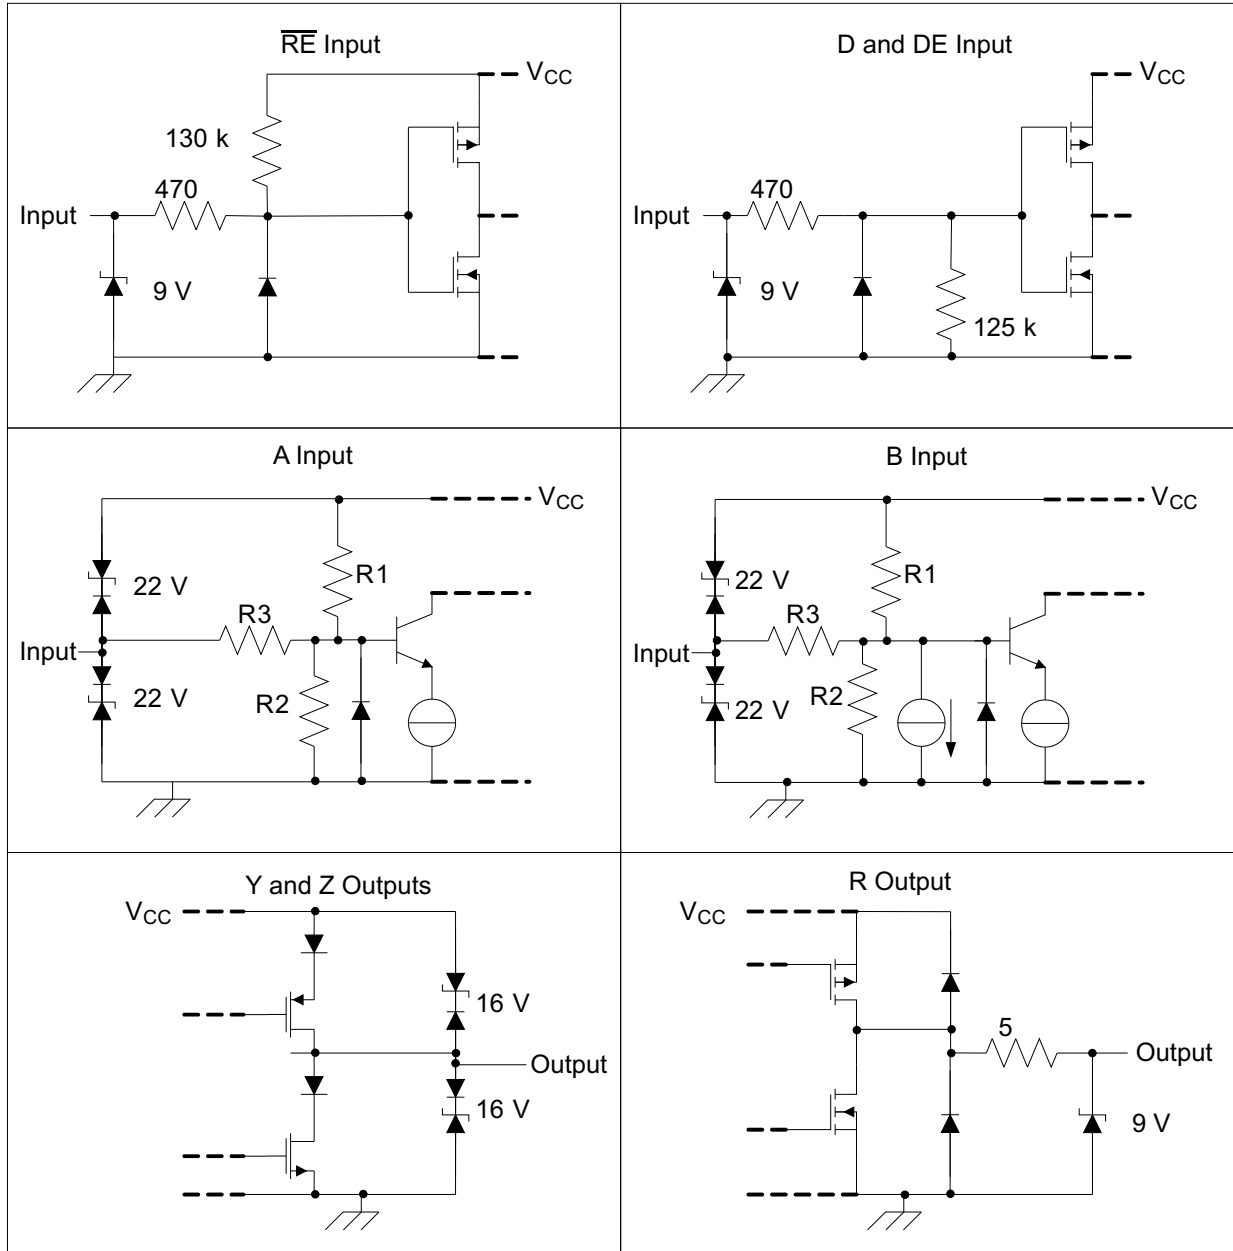

**SN65HVD30, SN65HVD31, SN65HVD32, SN65HVD36,  
SN65HVD37 DRIVER**

INPUT D	OUTPUTS	
	Y	Z
H	H	L
L	L	H
Open	L	H

**SN65HVD30, SN65HVD31, SN65HVD32, SN65HVD36,  
SN65HVD37 RECEIVER**

DIFFERENTIAL INPUTS $V_{ID} = V_A - V_B$	OUTPUT R
$V_{ID} \leq -0.2 \text{ V}$	L
$-0.2 \text{ V} < V_{ID} < -0.02 \text{ V}$	?
$-0.02 \text{ V} \leq V_{ID}$	H
Open Circuit	H
Idle circuit	H
Short Circuit, $V_A = V_B$	H

EQUIVALENT INPUT AND OUTPUT SCHEMATIC DIAGRAMS

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

D (R-PDSO-G14)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
  - D. Falls within JEDEC MS-012 variation AB.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
