# NC7SZ74 TinyLogic® UHS D-Type Flip-Flop with Preset and Clear

#### **General Description**

#### Features

- Space saving US8 surface mount package
- MicroPak<sup>™</sup> Pb-Free leadless package
- Ultra High Speed; t<sub>PD</sub> 2.6 ns Typ into 50 pF at 5V V<sub>CC</sub>

- $\blacksquare$  High Output Drive; ± 24 mA at 3V V<sub>CC</sub>
- Broad V<sub>CC</sub> Operating Range; 1.65V to 5.5V
- Power down high impedance inputs/output
- Overvoltage tolerant inputs facilitate 5V to 3V translation
- Patented noise/EMI reduction circuitry implemented

Note 1: Absolute Maximum Ratings, are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 2: Unused inputs must be held HIGH or LOW. They may not float.

Output Capacitance

Power Dissipation Capacitance (Note 4)

Note 4:  $C_{PD}$  is defined as the value of the internal equivalent capacitance which is derived from dynamic operating current consumption ( $I_{CCD}$ ) at no output loading and operating at 50% duty cycle. (See Figure 2)  $C_{PD}$  is related to  $I_{CCD}$  dynamic operating current by the expression:  $I_{CCD} = (C_{PD}) (V_{CC}) (f_{|N}) + (I_{CC} static).$
