5.8W DUAL AUDIO POWER AMPLIFIER.
19W BTL AUDIO POWER AMPLIFIER.

The TA7270P/TA7271P are dual audio power amplifier for consumer applications. It is designed for high power, low distortion and low noise. It also contains various kind of protectors. It is suitable for car-audio power amplifier with high performance.

- Two Kinds of Pin Configuration are Available: Normal (TA7270P) and Reverse (TA7271P) for Easier Layout Design of PC-board when Used in BTL-Stereo Application.
- Operating Supply Voltage Range:
VCC (opr)=9 ~ 18V
- High Power
VCC=13.2V, f=1kHz, RL=4Ω

BTL	19W (Typ.)	THD=10%
	15W (Typ.)	THD=1%
DUAL	5.8W (Typ.)	THD=10%

- Low Distortion
VCC=13.2V, f=1kHz, RL=4Ω

BTL	0.03% (Typ.)	POUT=4W, Gv=40dB
DUAL	0.06% (Typ.)	POUT=1W, Gv=52dB

- Low Noise
VCC=13.2V, RL=4Ω

BTL	0.14mVrms (Typ.)	Gv=40dB, Rg=0, DIN NOISE: DIN 45405
DUAL	0.7 mVrms (Typ.)	Gv=52dB, Rg=10kΩ, BW=20Hz ~ 20kHz

- Protector: Thermal Shut Down, Over Voltage Protection.
BTL-OCL DC Short Protection.

Unit in mm

Weight : 4.04g (TYP.)

APPLICATION INFORMATION

(This explanatory terminal number is for TA7270P)

1. VOLTAGE GAIN

(1) Dual Mode

The closed loop voltage gain G_v is determined by R_1 , R_2 , R_3 , R_4 and R_f .

$$G_v \approx 20 \log \frac{R_2 + R_f + R_1}{R_f + R_1} + 20 \log \frac{R_3 + R_4}{R_4} \text{ [dB]}$$

when $R_f=0$, $G_v=52\text{dB}$ (Typ.)

is given.

The recommended voltage gain is more than 40dB.

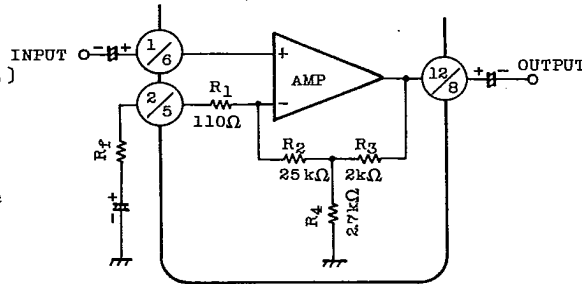

Fig 1

(2) BTL Mode

The recommended BTL connection amplifier is shown in Figure 2.

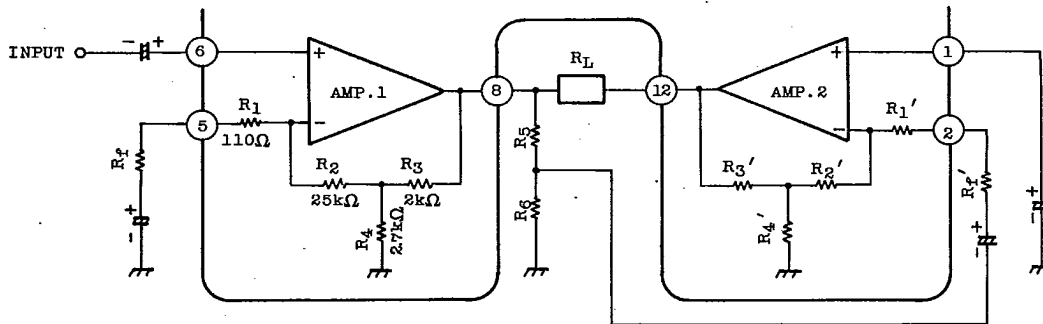

Fig. 2

T-74-05-01

AMP.1 is noninverting amplifier and AMP.2 is inverting one. The output voltage is divided by resistors R_5 and R_6 .

This divided voltage is applied to inverting input of AMP.2. R_5 and R_6 are determined in the following equation.

$$\frac{R_5+R_6}{R_5} = 20 \log \frac{R_1'+R_f'+R_2'}{R_1'+R_f'} + 20 \log \frac{R_3'+R_4'}{R_4'} \dots G_v \text{ in Dual Mode}$$

The voltage gain in this circuit is 6dB higher than that in dual mode.

$$G_v = 20 \log \frac{R_1+R_f+R_2}{R_1+R_f} + 20 \log \frac{R_3+R_4}{R_4} + 6 \quad [\text{dB}]$$

In case of $R_f=0$

$$G_v=52+6=58[\text{dB}]$$

In case of $R_f=750\Omega$

$$G_v=34+6=40[\text{dB}]$$

2. MUTING

Audio muting can be accomplished by connecting pin ③ (ripple filter) to GND as shown in Fig.3.

Then, the bias circuits are cut off.

Amount of muting attenuation is more than 60dB.

Precaution in muting operation is as follows.

- (1) The recovery time at muting off depends on Capacitance C_2 , C_4 and C_5 in the test Circuit.
- (2) As this muting system is operated by the short-circuit of ripple filter : C_5 , the ripple rejection ratio becomes worse in a muting mode.
Note that some "POP-Noise" occur when bias is shut off with mute-on.

Fig.3

3. CAPACITOR C_7 , C_8

The purpose of capacitor C_7 , C_8 is to prevent oscillation.

These capacitors need to be small temperature coefficient. So celamic capacitor is unsuitable.

A voltage gain less than 40dB results occasionally in a parasitic oscillation.

Stability for parasitic oscillation is promoted by connecting capacitor of 500~1000pF between pin ① and pin ② (pin ⑤ and pin ⑥).

The additional capacitors are recommended to be inserted.

4. PRECAUTION AT PRINT BOARD DESIGN

- (1) Print Pattern board should be designed in consideration of stability for parasitic oscillation.

The following parts-layout is recommended.

- 1st. Capacitors C6 and C10 are spaced most close to the output pin.
 - 2nd. Capacitor C7 or C8 is spaced close to the output pin next to C6 and C10.
 - 3rd. Capacitor C9 is spaced close to it next to C7 and C8.
 - 4th. Capacitor C11 is spaced close to it next to C9.
- (2) Input line (pin ⑥) and PW-GND line (pin ⑦) should not be spaced in parallel. In the parallel layout, output current signal in PW-GND line is fed back to input line by electromagnetic coupling. Then it deteriorates the total harmonic distortion, especially at high audio frequency region.
- (3) Undesirable terminating of capacitors deteriorates "pop" noise or THD. Capacitors C2, C4 and C5 should be terminated to Pre-GND (pin ④). Capacitors C7, C11, and C14 should be terminated to PW-GND (pin ⑦).
- (4) It is recommended to refer the standard print board.
