

TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

TA7288P

DUAL BRIDGE DRIVER

The TA7288P is a bridge driver that is ideal for normal / reverse switching.

This circuit offers four modes : normal rotation, reverse rotation, stop, and brake.

The output current is 1.0A (AVE.) and 2.0A (PEAK).

TA7288P has an ideal circuit configuration for VCR front tape loading and offers two types of power supply pins. One is for output, the other for control. The V_{ref} pin on the output side used to control the motor voltage facilitates motor voltage adjustment. The IC requires little input current, enabling direct connection with CMOS.

INPUT CIRCUIT

Input terminals of pin④, ⑤ and pin⑥ are all high active type and have a hysteresis of 0.7V (Typ.)
 5μA type of source mode input current is required.

OUTPUT CIRCUIT

Output voltage is controlled by V_{ref} voltage. Relationship between V_{OUT} and V_{ref} is

$$V_{OUT} = V_{BE} (\approx 0.7) + V_{ref}$$

V_{ref} terminal required to connect to V_S terminal for stable operation in case of no requirement of V_{OUT} control.
