DC Signal Output Voltage	V _{OS}	3.0	—	8.0	V	(Note 9)

(Note 2) Sensitivity is defined for each color of signal outputs average when the photosensitive surface is applied with the light of uniform illumination and uniform color temperature.

(Note 3) PRNU is defined for each color on a single chip by the expressions below when the photosensitive surface is applied with the light of uniform illumination 1 and uniform color temperature.

$$PRNU = \frac{\Delta x}{\bar{x}} \times 100 (\%)$$

Where \bar{x} is average of referred outputs and Δx is the maximum deviation from \bar{x} . The amount of the incident light is shown below.

$$\text{Red} = \frac{1}{2} SE$$

$$\text{Green} = \frac{1}{2} SE$$

$$\text{Blue} = \frac{1}{4} SE$$

(Note 4) V_{SAT} is defined as minimum saturation output voltage of all effective pixels.

(Note 5) Definition of SE : $SE = \frac{V_{SAT}}{R}$ (lx·s)

(Note 6) V_{DRK} is defined as average dark signal voltage of all effective pixels.

(Note 7) DSNU is defined as different voltage between V_{DRK} and V_{MDK} when V_{MDK} is maximum dark signal voltage.

(Note 8) Definition of DR : $DR = \frac{V_{SAT}}{V_{DRK}}$

V_{DRK} is proportional to t_{INT} (Integration Time).
So the shorter t_{INT} gets condition makes wider DR value.

(Note 9) DC output voltage is defined as follows:

TYPICAL PERFORMANCE CURVES

ELEMENT SHAPE

Unit in mm

CAUTION**1. Window Glass**

The dust and stain on the glass window of the package degrade optical performance of CCD sensor.

Keep the glass window clean by saturating a cotton swab in alcohol and lightly wiping the surface, and allow the glass to dry, by blowing with filtered dry N₂.

Care should be taken to avoid mechanical or thermal shock because the glass window is easily to damage.

2. Electrostatic Breakdown

Store in shorting clip or in conductive foam to avoid electrostatic breakdown.

3. Incident Light

CCD sensor is sensitive to infrared light.

Note that infrared light component degrades resolution and PRNU of CCD sensor.

4. Lead Frame Forming

Since this package is not strong against mechanical stress, you should not reform the lead frame. We recommend to use a IC-inserter when you assemble to PCB.
