National Semiconductor

The TP5089 is a low threshold voltage, field-implanted, metal gate CMOS integrated circuit. It interfaces directly to a

standard telephone keypad and generates all dual tone mul-

ti-frequency pairs required in tone-dialing systems. The tone

synthesizers are locked to an on-chip reference oscillator

using an inexpensive 3.579545 MHz crystal for high tone

accuracy. The crystal and an output load resistor are the

only external components required for tone generation. A

MUTE OUT logic signal, which changes state when any key

TP5089 DTMF (TOUCH-TONE) Generator

General Description

is depressed, is also provided.

Features

- 3.5V-10V operation when generating tones
- 2V operation of keyscan and MUTE logic
- Static sensing of key closures or logic inputs
- On-chip 3.579545 MHz crystal-controlled oscillator
- Output amplitudes proportional to supply voltage
- High group pre-emphasis
- Low harmonic distortion
- Open emitter-follower low-impedance output
- SINGLE TONE INHIBIT pin

Electrical Characteristics Unless otherwise noted, limits printed in **BOLD** characters are guaranteed for $V_{DD} = 3.5V$ to 10V, $T_A = 0^{\circ}C$ to $+60^{\circ}C$ by correlation with 100% electrical testing at $T_A = 25^{\circ}C$. All other limits are assured by correlation with other production tests and/or product design and characterization.

| Parameter | Conditions | Min | Тур | Max | Units |
|--|--|---------------------|------------|---------------------|----------|
| Minimum Supply Voltage for Keysense and MUTE Logic Functions | | 2 | | | v |
